ShippingCo

Complete client guide

Bookings, delivery work, money and business setup.

40 feature guides. Simple steps. Real web-app screenshots.

- Use the contents or PDF bookmarks to jump to a feature.
- Each chapter explains what the feature does, the fields to fill and what happens next.
- Screenshots contain example records, not customer data. Empty results and provider errors are labelled honestly.
- Text pages are sized for reading. Larger screenshot pages preserve the screen details; zoom in when needed.
- Revised 2 November 2026.

Start here

Use ShippingCo to book parcels, organise delivery work and keep clear money records.

How to use this guide

- Start with the table of contents. Select a feature name to open its chapter.
- Read the purpose and the steps beside the screenshots. Button names match the web app.
- Screenshots use example test records. Names, dates, amounts and balances in them are not your business records.
- Some screenshots show an empty page. This means no matching records were found, or setup is still needed. Follow the chapter’s first action.
- The options you see depend on your role and selected branch. Ask your administrator for access if a needed option is missing.
- A booking, a money receipt and a delivery confirmation are different records. Saving one does not automatically complete the others.

First-time setup

- Sign in with the email registered for your business. If you have no workspace, enter your business name and first location name.
- Choose the correct branch in the Franchise selector at the top. Your work is saved for that branch.
- Ask the owner or branch administrator to set up active prices and tax rules in Settings & help. Both must cover the booking time.
- Set up receiving accounts before recording money. Set up cash locations if your team uses cash drawers or agent cash custody.
- Create customer accounts only for customers who have agreed monthly billing. A normal one-off booking does not need a monthly account.
- Invite staff and give each person only the role needed for their work. A shared password is not needed for email-code sign-in.

A normal day at the counter

- Create a booking: choose the sender, enter the receiver, add parcels, select service and check the bill.
- Print the saved booking receipt when needed. Record money received as a separate action.
- Use Packages to find a parcel by its tracking number. Use parcel groups and routes to prepare dispatch work.
- Record handovers, departure, delivery attempts and delivery proof in the correct delivery screens.
- Record expenses, cash handovers and any approved refunds when they happen.
- At the end of the day, review outstanding money, count each cash drawer and use the closing flow.

- Open reports to review saved business figures. A report does not move money or change a parcel’s status.

Sidebar and common controls

- Create: start New booking, Record received money or Arrange a pickup, when your role allows it.
- Overview: see the day’s figures and work that needs attention.
- Bookings: open the parcel list, New Booking and Receipts.
- Delivery: work with pickups, parcel groups, routes, handovers, delivery work and e-way records.
- Money: record receipts, manage cash, customer accounts, agent money, approvals and bank checking.
- Customers: find a saved sender and reuse their details.
- Reports: choose the report that answers your business question.
- Settings & help: change business setup and open messages or human support.
- On a narrow screen, open the menu button to see the sidebar. Wide tables may scroll sideways; some lists become stacked rows.
- Search and filters change which records are shown. Load more brings the next page of results; the first page may not contain every record.

Understand the result of an action

- Loading means the app is still checking. Wait before trying the action again.
- A saved or confirmed message means the app received a confirmed result.
- An uncertain result means the connection stopped before the result was confirmed. Use the matching Retry same request control.
- Do not make a second booking, payment or refund just because the first response is late.
- If your role or branch changes, private data is cleared or reloaded. Reopen the record in the correct branch.
- Read validation beside a field, correct the entry and review again. Never make up a reference to get past a form.

Start here

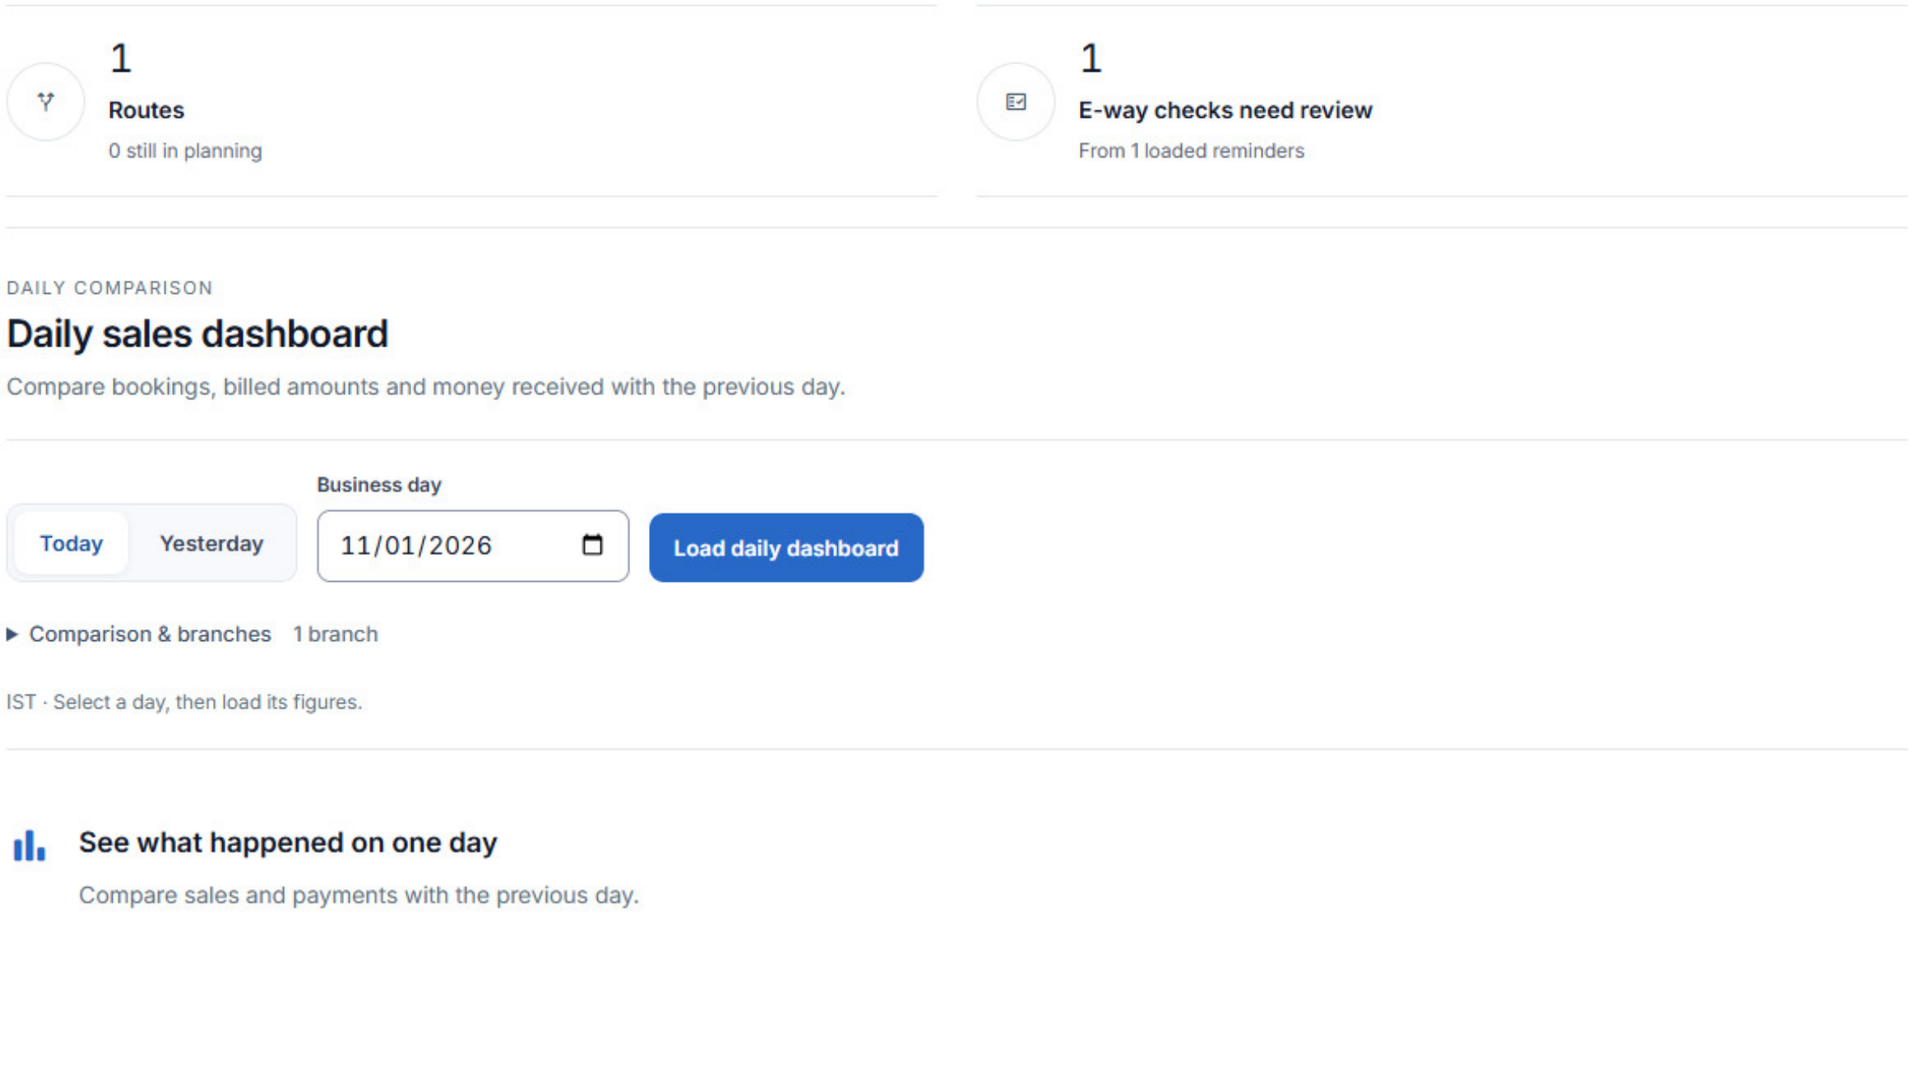
The main workspace. Start a new task from Create, or open a feature from the sidebar. Example screen using test records. | Screen section 3 of 3 (slight overlap keeps text readable).



Sign in, join a shop and sign out

Enter your workspace with an email code, set up your first shop, and sign out safely.

Screen 1 - Sign in

- Open ShippingCo. Enter the email registered for your business in Email.
- Select Send sign-in code. No password is needed.
- If the email has access, an 8-digit code is sent. Check your inbox and spam folder.
- Enter all 8 digits in Sign-in code. You can paste the code. Select Verify and continue.
- The code expires after 10 minutes. Use Use email again to return and request another code or correct the email.
- If sign-in fails, check the address and code. The app does not show whether an unknown email has an account.

Screen 2 - Set up your first shop

- This screen appears when your signed-in account does not yet have a workspace.
- Business name: enter the name your customers know. Use up to 120 characters.
- Location name: enter a name your team recognises, such as Main shop or Pune counter. Use up to 120 characters.
- Branch code - optional: MAIN is already supplied for the first branch. Open this section only if your business uses another short code.
- A custom location code starts with a capital letter and uses capital letters, numbers or underscores, up to 32 characters.
- Select Create workspace. The app creates the business and its first location.
- If the result is uncertain, the entered details stay locked. Select Retry same request; do not start another workspace.
- After the workspace opens, complete prices, tax rules and receiving accounts before normal counter work.

Screen 3 - Join another shop or branch

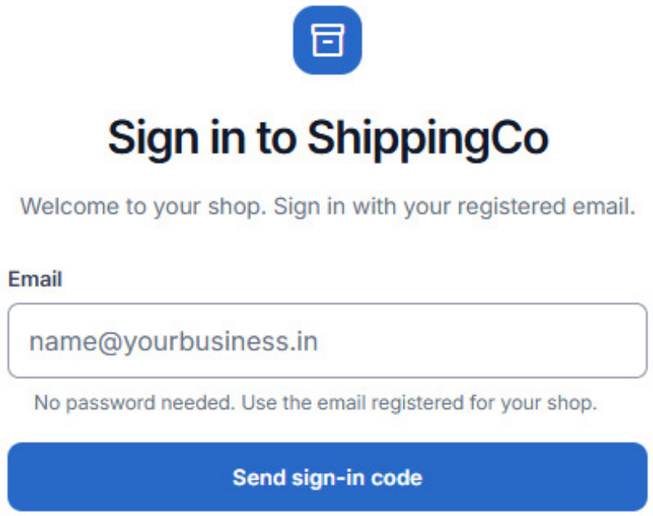
- Open Profile, then Account and invitations.
- If an administrator gave you an invitation, open the invitation section.
- Invitation code: paste the exact invitation code you received. It is private; do not put it in a customer note.
- Select Accept invitation. Wait while the app checks current access.
- An expired or withdrawn invitation cannot be used. Ask the administrator for a new one.
- After acceptance, choose the authorised branch from the Franchise selector. You will only see branches the app permits.

Screen 4 - Profile and sign out

- Open Profile at the bottom of the sidebar. Account and invitations contains your account tools.
- Account reference for support shows the account reference an administrator may need. It is not a parcel tracking number.
- Select Sign out when you finish using the device.
- If a sensitive request is still being checked, finish its retry or recovery before leaving. Do not bypass that warning.
- If the connection interrupts sign-out, private workspace data is hidden. Use Retry sign out to finish closing the session.
- On a shared counter computer, wait for the signed-out screen before giving the device to someone else.

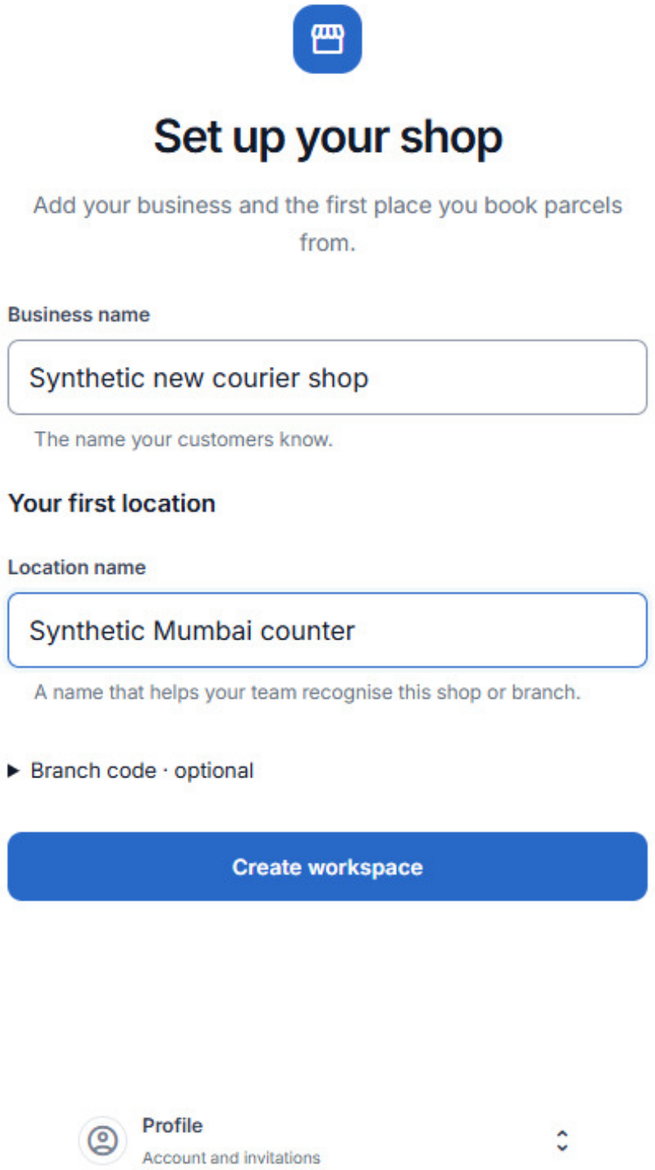
Sign in, join a shop and sign out

Sign in with the email registered for the business. Example screen using test records.



Sign in, join a shop and sign out

First-shop setup needs a business name and location name. The optional branch code is already filled. Example screen using test records.



Overview and daily figures

What this helps you do

See bookings, billed amounts, payments and work waiting for your team.

Before you start

Sign in and choose the correct branch. Your access decides which actions you can use.

Open the next task and inspect daily evidence

- Open Overview and confirm the Franchise shown at the top. New booking starts booking entry. Booked today opens the Packages list for today. Record payment opens Money receipts. Actions depend on your role.
- For permitted finance staff, Business performance loads a booking trend. Last 7 days or Last 30 days changes the period. Custom dates shows Chart start date and Chart end date; choose up to 31 days ending today or earlier and select Apply dates.
- Choose Bookings or Billed amount to change the chart. Billed amount includes tax and follows booking dates. Average booking divides that billed amount by the booking count; it is unavailable when there are no bookings. Expand Daily figures for exact day-by-day values.
- Delivery at a glance covers current work across all dates. Select Parcels, Active lots, Routes or E-way checks need review to open that work area. Counts cover the first 100 loaded records; a plus sign or more-pages note means more records are available.
- In the daily dashboard, select Today, Yesterday or a Business day, then Load daily dashboard. Expand Comparison & branches to choose Same time of day or Full previous day and the permitted branches. The current branch remains included.
- After loading, select a Bookings, Billed amount or Money received figure, including a previous-day figure, to inspect its source rows. How customers paid lets you select a payment-method amount. Money received includes payments for older bookings and advances.
- Expand Report dates & calculation details for capture, expiry and cutoff times. More business figures reveals additional metrics; Show key figures returns to the shorter view.
- View source records & download contains the saved evidence. All selected-day sources clears a metric-specific view. Next source page loads another page. Download matching CSV is offered only with export permission.
- Refunds are shown separately and reversals may reduce a payment-method total. A missing percentage is not zero growth. Load a new dashboard when you need later evidence; old saved figures do not update themselves.

Quick steps

- Open Overview.
- Choose Last 7 days, Last 30 days or Custom dates in Business performance.

- Choose Bookings or Billed amount to change the chart. Open Daily figures for exact numbers.
- In Daily sales dashboard, select a business day and load its figures.
- Select an amount to see the records behind it. Download the matching CSV if your role allows it.

Fields and choices

- Chart start date / Chart end date: For custom dates. Choose up to 31 days, ending today or earlier.
- Business day: The day to compare. The daily report uses India time.
- Compare with previous day: Same time of day gives a time-matched comparison. Full previous day uses the whole earlier day.
- Branches included: Choose only the permitted branches. The active branch stays included.
- Bookings: Number of bookings in the period.
- Billed amount: Value billed, including tax. This is different from money received.
- Money received: Payments recorded in the period, including payments for older bookings and advances.

What to check

- Delivery summary counts use the first 100 records. Open the work area for the full list.
- Saved figures do not update themselves when new evidence arrives. Load a new report.
- A missing comparison percentage is not the same as zero growth.
- A failed report is not proof that the business had no activity. Retry it.

Overview and daily figures

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen. | Screen section 1 of 3 (slight overlap keeps text readable).

Find a customer

What this helps you do

Reuse the right customer details and avoid selecting the wrong person.

Before you start

Sign in and choose the correct branch. Your access decides which actions you can use.

Search, check the match and continue

- Open Customers. Search by Customer name requires at least three letters and the same capital letters as the saved name. Search by Phone number requires the full phone number with country code. Select Search after entering it.
- Changing Search by clears the previous query and selection. Typing a new query also clears the selected customer. Select Search to load the new results; Clear search starts again.
- Results show customer name, displayed phone and saved address. Not provided means the address is missing. Use Load more customers when more matches are available.
- Select View beside the correct name. The selected customer panel repeats the phone and address so you can check the match before continuing. Matching a phone number alone is not proof of identity.
- New booking for the selected customer opens booking entry with that customer selected. View bookings opens the Packages list for that customer. Customer accounts is available only if your role can read accounts.
- Book for a new customer opens a fresh booking when the person is not yet saved. A failed search is not a new-customer confirmation: retry the lookup or check spelling and branch first.

Quick steps

- Open Customers.
- Choose Search by: Customer name or Phone number.
- Enter the search and select Search.
- Select View beside the correct customer. Check the phone and address.
- Choose New booking for that customer or View bookings.

Fields and choices

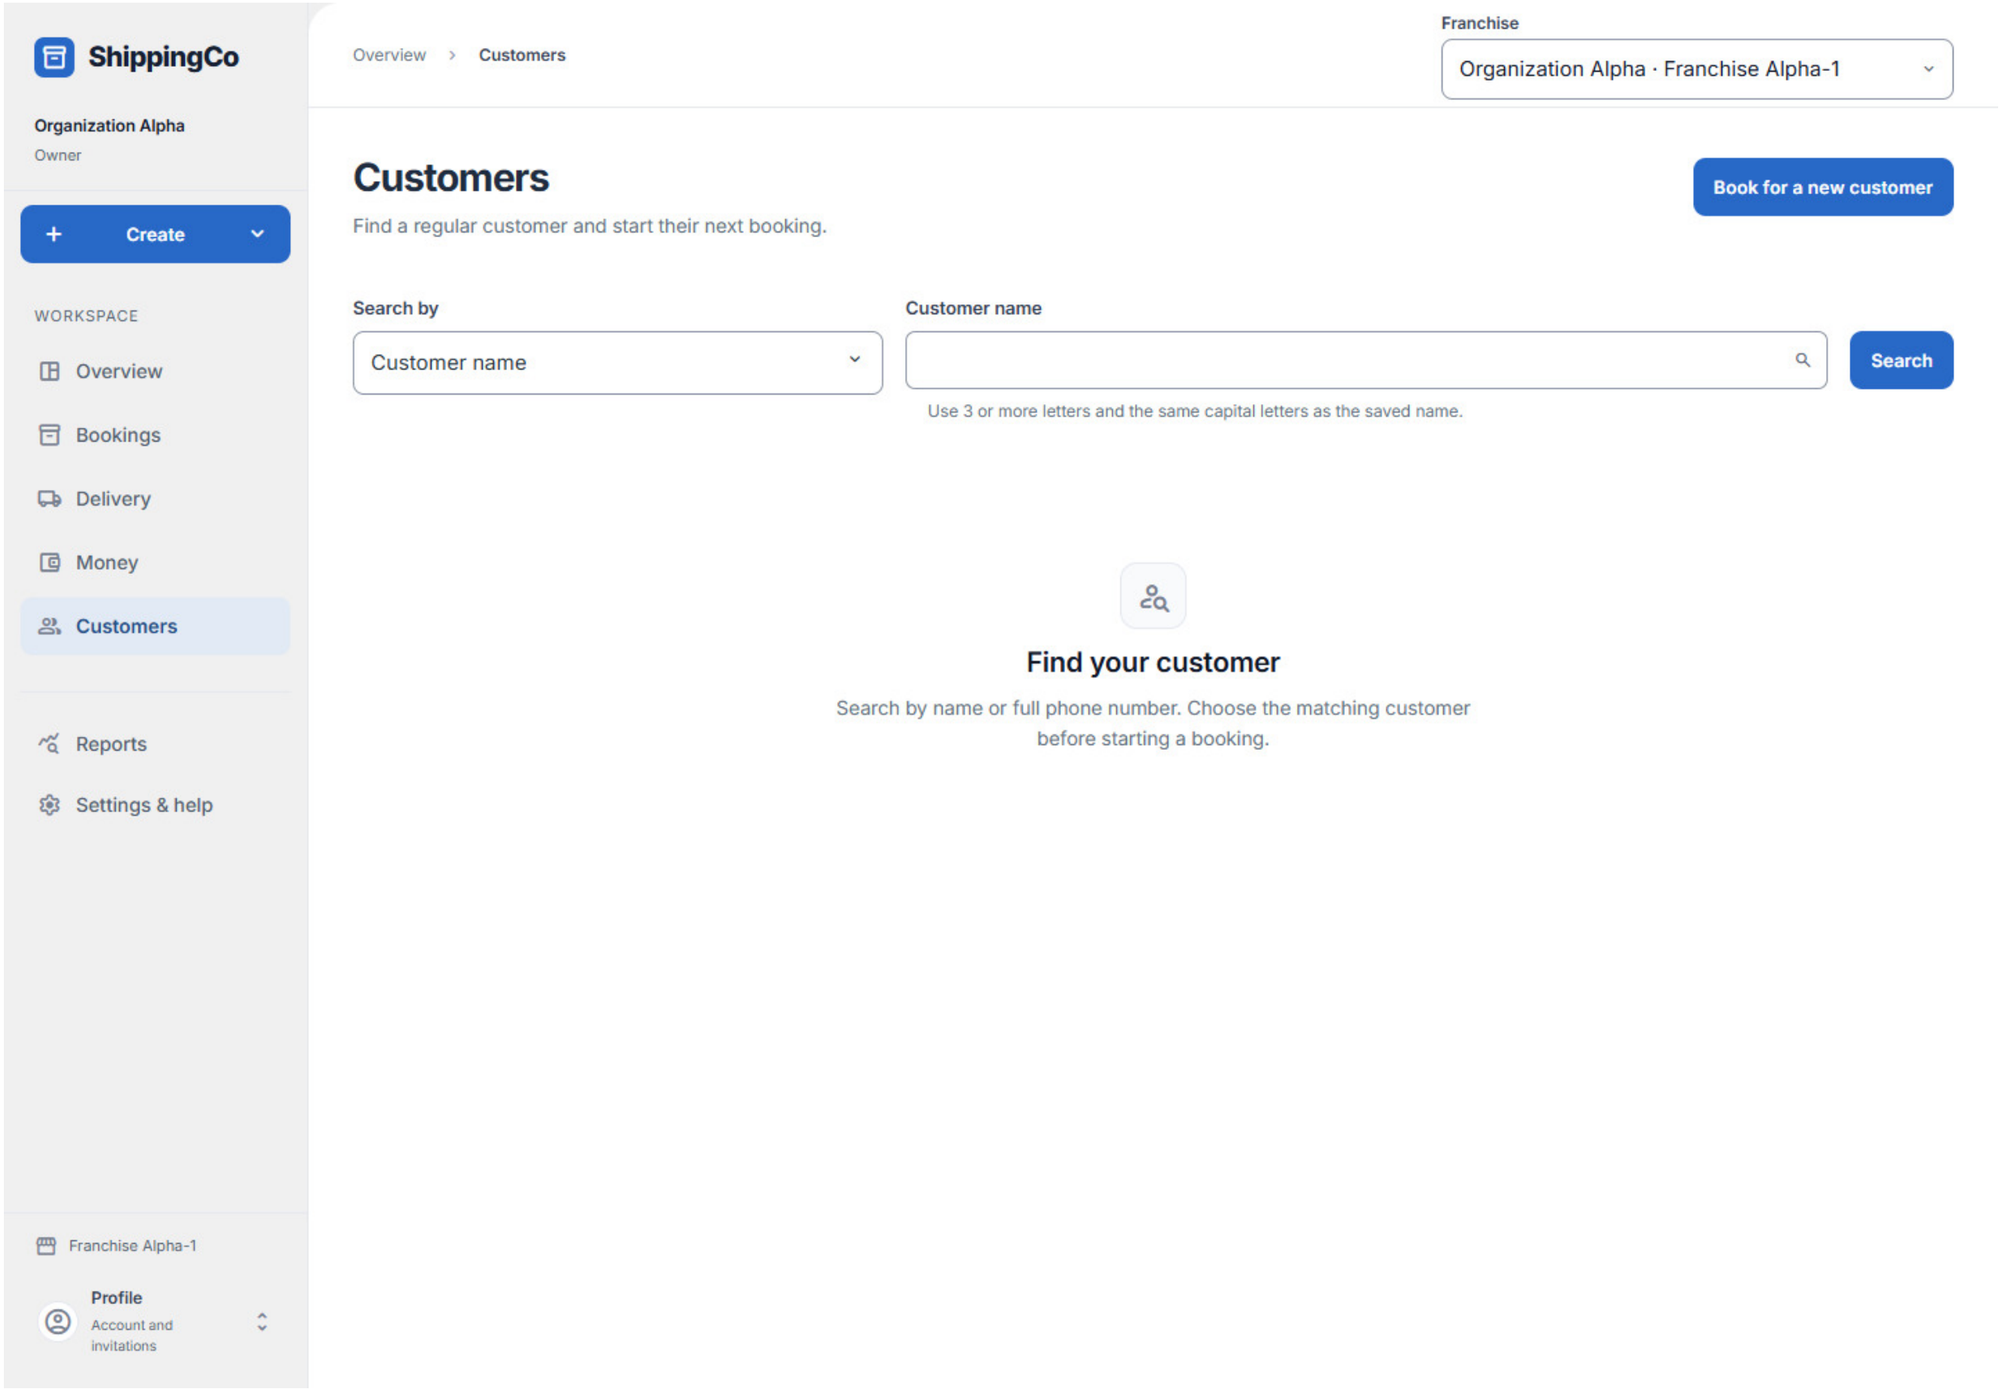
- Search by: Choose name or phone.
- Customer name: Use at least three letters. Match the capital letters in the saved name.
- Phone number: Use the full phone number with country code.

What to check

- If nothing matches, check the spelling and phone number. You can create the customer during a new booking.
- A phone number alone does not prove someone’s identity.
- Clear search to start again.

Find a customer

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen.



Choose and read a report

What this helps you do

Answer a business question using saved figures and the records behind them.

Before you start

Sign in and choose the correct branch. Your access decides which actions you can use.

Choose a report and save a matching set of figures

- Open Reports in the main navigation. Expand Choose a report to see questions such as How much did we bill?, Which payments are overdue?, How are deliveries doing? and Which bookings make up the figures?. Only reports allowed for your role appear.
- The report choice closes after selection. Reopen Choose a report to switch. Report scope details explains the active branch; it does not grant extra access or change an existing saved snapshot.
- For Booking snapshots, choose Which bookings make up the figures?. Expand What this report includes to read its limits. The report uses original booking charges and net funds applied to those bills; customer advances stay in Money receipts.
- Use Today or This week, or set From day and Through day manually in Indian time. Order chooses Newest first or Oldest first. Choose at most 31 days, then select Create snapshot.
- Read Saved period, capture time and booking count before comparing totals. Billed gross includes tax; Tax exclusive revenue excludes tax; Collections is money applied to those bookings; Outstanding is their remaining balance. Payments applied later can be included up to capture.
- The booking evidence table lists each booking, confirmation time, booked amount, collected amount and outstanding balance. Load more bookings continues the saved list. Download matching CSV exports this same saved snapshot where permitted.
- Costs and due dates are unknown in Booking snapshots. Use Sales and GST for corrections, actual refunds and adjusted balances; this snapshot is not a GST filing report.
- A snapshot holds up to 5,000 bookings and expires after 24 hours. If 20 reports are still active, reuse one or wait for expiry. Retry same snapshot request retries the original uncertain creation; Retry saved report reloads an existing result.

Quick steps

- Open Reports & insights.
- Open Choose a report and pick the question you want to answer.
- Set the dates and other choices shown for that report.
- Create the report. Check its saved period and capture time.
- Open source records to understand a total. Download a matching CSV where allowed.

Fields and choices

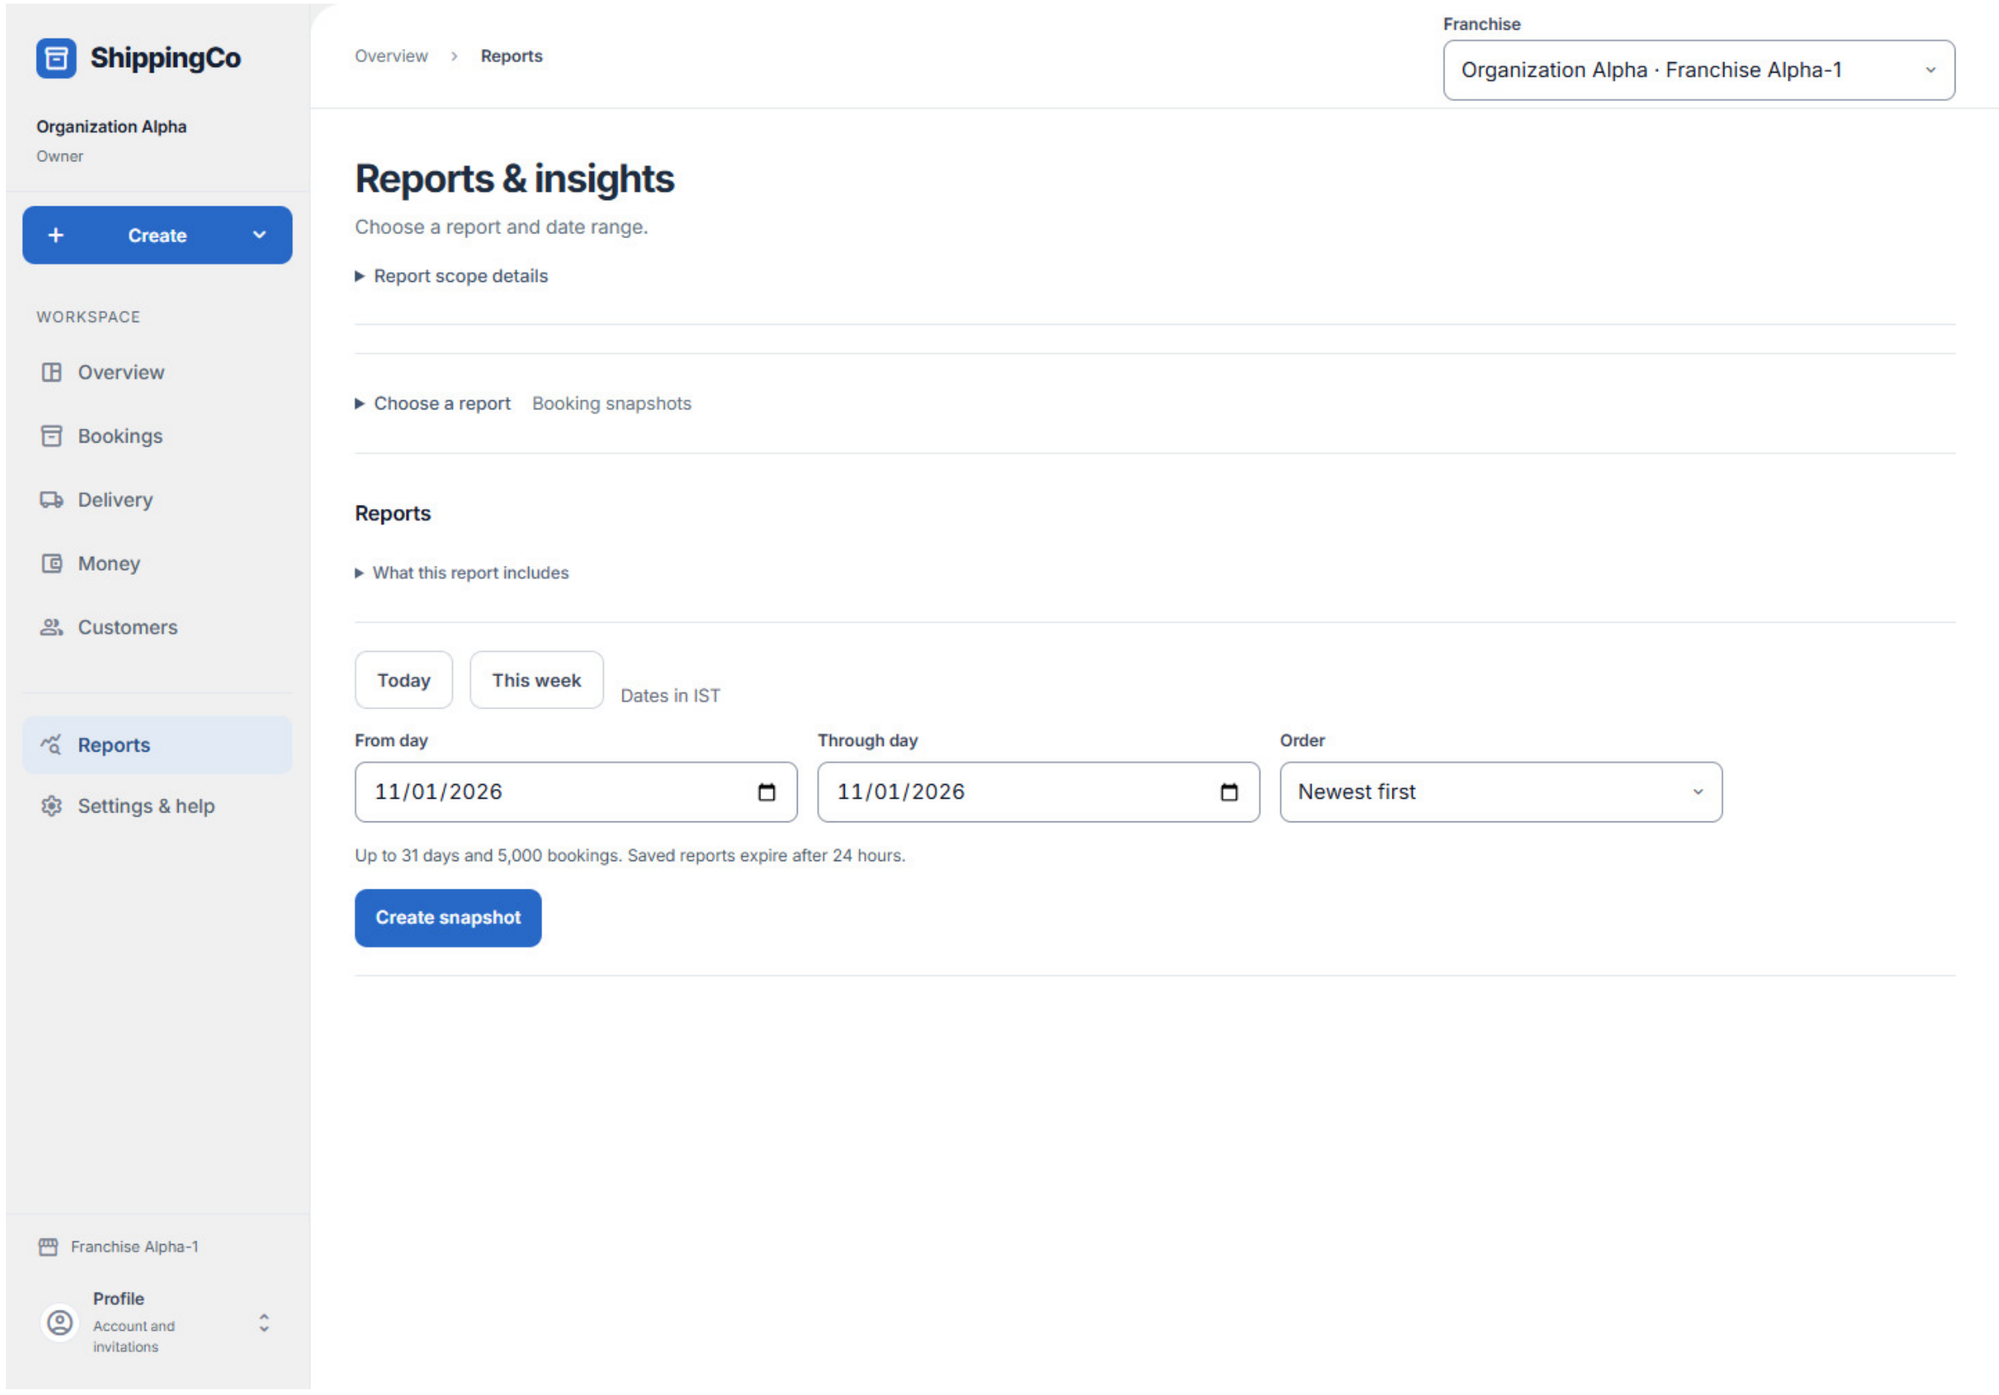
- Sales and GST: Billed amounts, tax groups and saved financial evidence.
- Booking snapshots: Original booking amounts and linked collections.
- To-Pay ageing: Unpaid balances grouped by how overdue they are.
- Delivery performance: Parcel and route results.
- Messaging and assistant: Message and assistant activity.
- Shipment costs: Recorded costs and contribution.
- Owner summaries: Scheduled summaries and overdue alerts.
- Accountant register: Financial records for the accountant.
- From day / Through day: The first and last date of the report.
- Order: For booking snapshots: newest first or oldest first.

What to check

- Booking snapshots allow up to 31 days and 5,000 bookings. They expire after 24 hours.
- A CSV uses the saved report, not a fresh set of numbers.
- The booking snapshot is not a GST filing report.
- Unknown means the app does not have the needed facts. It does not mean zero.
- You may have permission to view a report without permission to export it.

Choose and read a report

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen.



Delivery performance report

What this helps you do

See which parcels were delivered and compare delivery against the expected time.

Before you start

Sign in and choose the correct branch. Your access decides which actions you can use.

Read the delivery measurement correctly

- Open Reports, expand Choose a report and choose How are deliveries doing? / Delivery performance. Open How delivery performance is measured before comparing figures.
- Today and This week provide date shortcuts. From day and Through day select booking dates in Indian time, up to 31 days. ETA basis chooses Original dispatch-route ETA or Last applied ETA before delivery.
- Select Create performance snapshot. The saved group contains parcels from those booking dates; each parcel is counted once, including parcels attached through both a group and a direct route source.
- After the result loads, use Destination drill-through and Route drill-through to inspect the saved group. Selecting a destination clears the route selection. All destinations and All routes widen the result.
- Open Saved timing and route on a parcel row for actual delivery time, original and revised ETA and their versions, route, departure and arrival. Unknown timing does not prove an on-time delivery.
- Load more parcels shows the next evidence rows. Download matching performance CSV uses the saved report and selected group where your role permits export. An empty selection produces headers rather than invented rows.
- Saved reports contain at most 5,000 parcels and expire after 24 hours. Retry same performance request completes the original uncertain request; Retry saved performance reloads saved evidence. Create a new snapshot after expiry.

Quick steps

- Open Reports and choose Delivery performance.
- Set the dates and ETA basis. Create performance snapshot.
- Use the destination and route choices to narrow the saved result.
- Read the parcel evidence. Download the matching CSV if allowed.

Fields and choices

- From day / Through day: Choose a period of up to 31 days.
- ETA basis: Original dispatch-route ETA uses the first expected arrival. Last applied ETA before delivery uses the later estimate saved before delivery.
- Destination drill-through: Show all destinations or one destination in the saved report.

- Route drill-through: Show all routes or one route in the saved report.

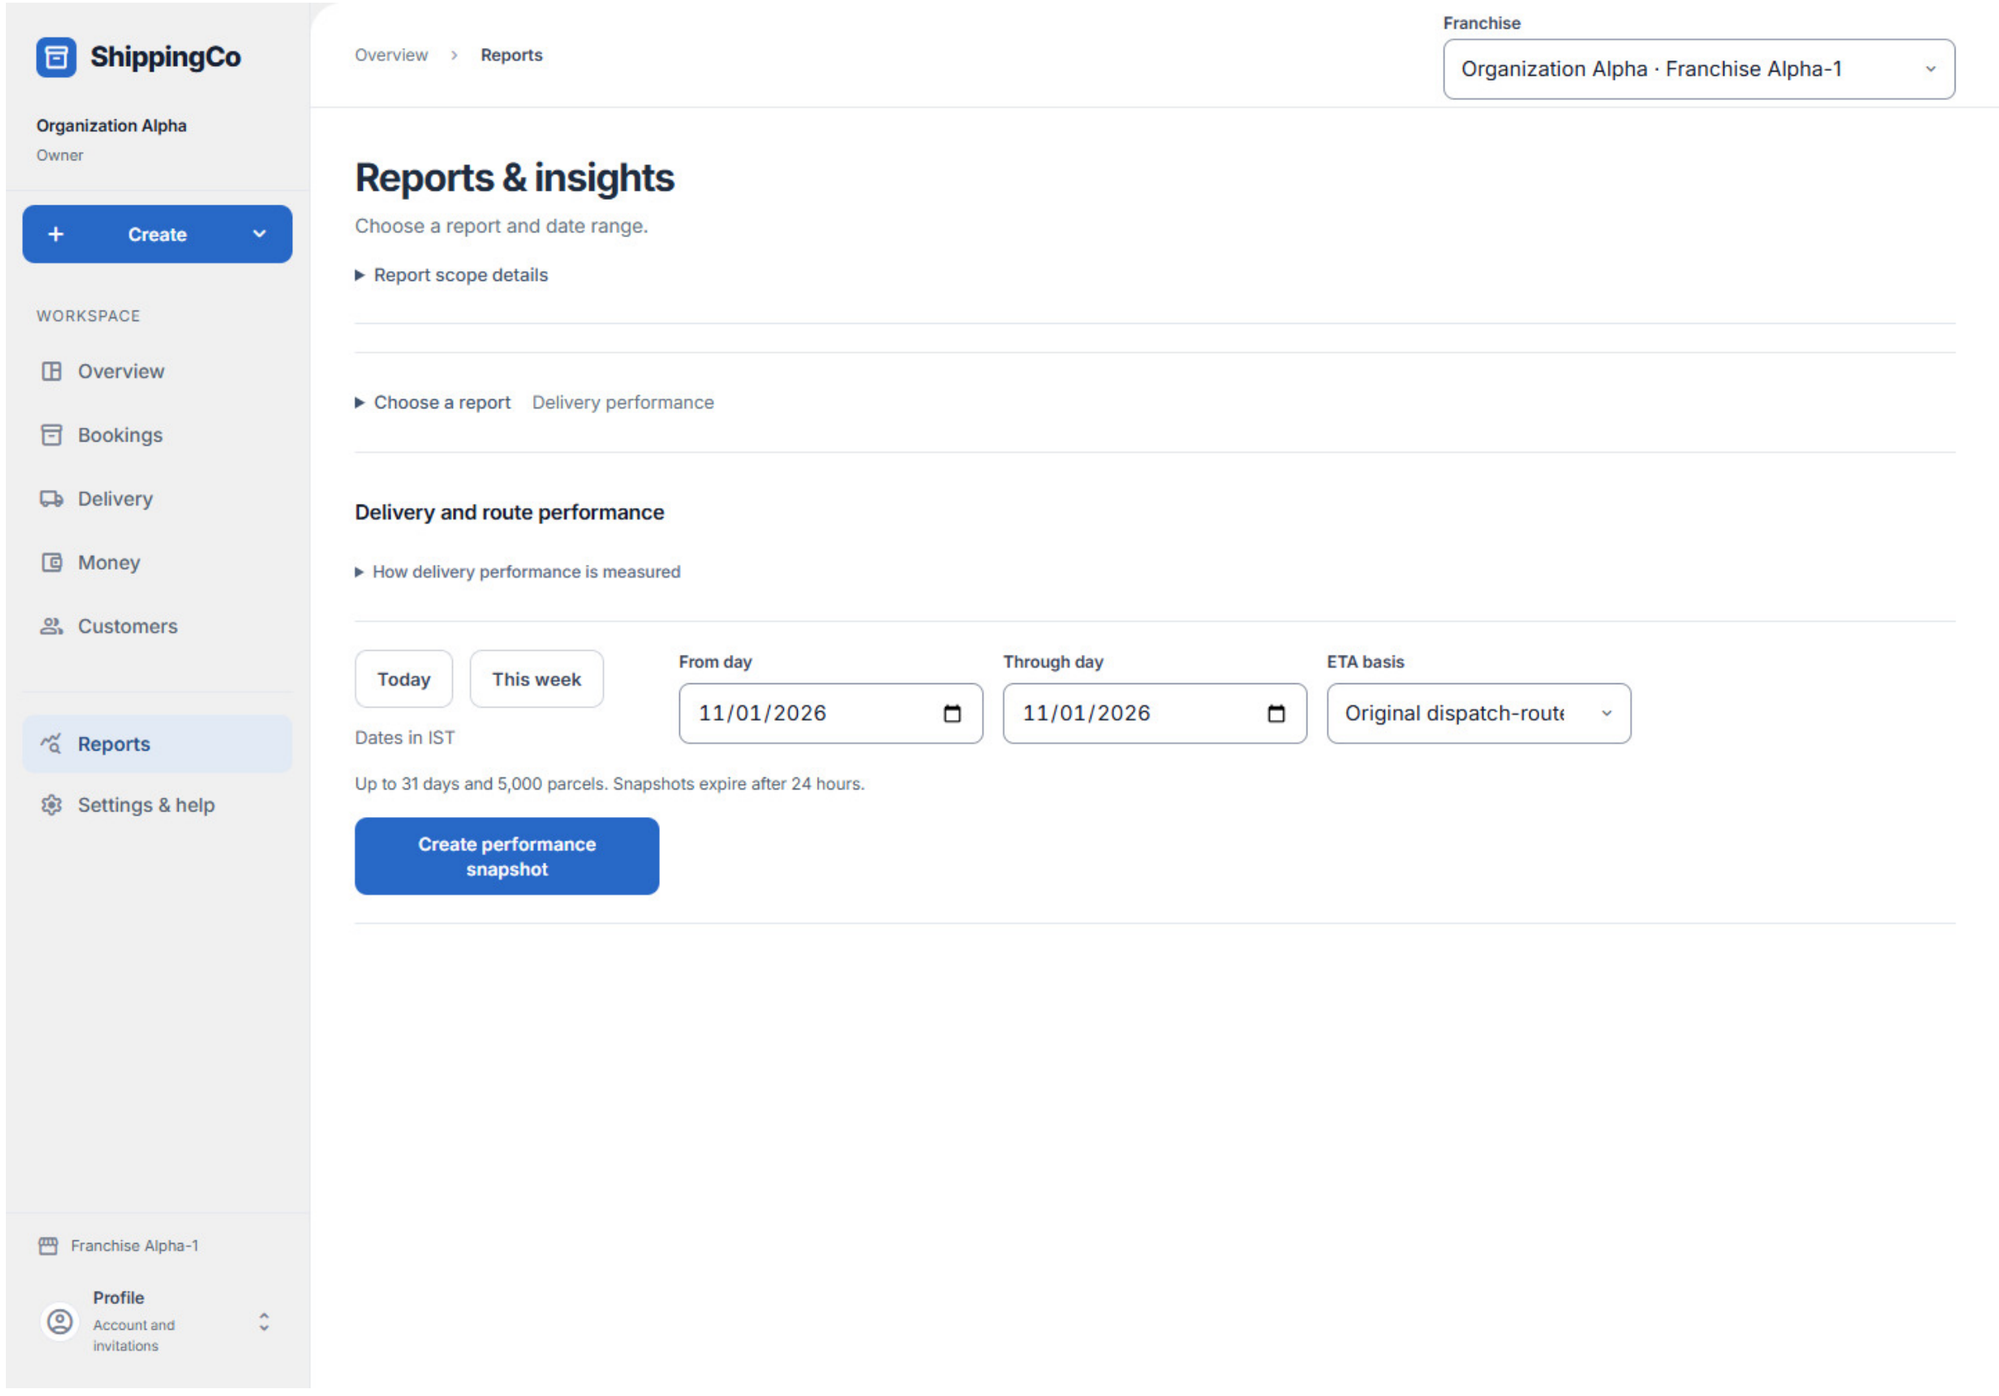
What to check

- ETA means expected arrival time.
- A report can include up to 5,000 parcels and expires after 24 hours.
- If the saved report expires, create a new one.
- Missing ETA information cannot prove that delivery was on time.

Saved performance result and filters

Delivery performance report

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen.



Delivery performance report

Synthetic review snapshot with zero parcels in the selected booking-date period. Zero counts are test-period results, not real business performance. On-time performance is unavailable because there are no eligible deliveries. | Screen section 1 of 2 (slight overlap keeps text readable).

Download matching performance CSV

No parcels match this selection. CSV contains headers.

Create a booking

Create a booking in four steps: From, To, Parcel and Billing, then Review and print.

Before opening the form

- Choose the correct branch. Its prices and tax policy must be published and active.
- Keep the sender’s contact details, receiver’s full address and packed parcel weight ready.
- Open Create in the sidebar and choose New booking. A centred form opens; on a small screen it fills the screen.
- Use Continue to move forward and Back to review earlier entries. The form keeps the entered details while you move between steps.
- A booking can contain several parcels, but they all go to the same receiver and use one destination and service.
- This flow is for domestic bookings within the app’s supported tax setup. International bookings and unsupported tax cases cannot be completed here.

Step 1 - From: choose the sender

- Customer search: type a name or use the customer’s phone number to find a saved customer. Check the name and phone before selecting.
- If the person is not listed, choose the Add option for the entered name. The new customer form opens inside the booking.
- Customer name: enter the person or business sending the parcel. This is required.
- Customer phone: choose the country code and enter the number, or paste a complete number starting with +. This is required.
- Customer address: enter a useful shop or contact address if available. This is optional and does not arrange a pickup.
- Select Create customer. Wait for the customer details to be confirmed before continuing.
- For a saved customer, Change selects someone else. Edit details lets you correct the customer and save the change.
- If someone else changed the customer, refresh and deliberately use the latest details. Do not continue with the wrong person.

Step 2 - To: enter the receiver

- Recipient name: enter the person who should receive the parcel.
- Recipient phone: enter their reachable phone number with the country code.
- Country: the current booking flow uses India.
- PIN code: enter the six-digit delivery PIN code. It must not start with zero.

- City: enter the delivery city or town.
- State / region: enter the delivery state or region.
- Recipient address: enter the building, shop or flat number, street and area. Do not rely on the PIN code alone.
- All these receiver and address details are required in this form. Every parcel added to this booking uses this receiver.

Step 3 - Parcel details

- Docket number: type or scan the number on the parcel label. Each parcel needs its own number. Keep any leading zeros.
- Start with Parcel 1. Contents type identifies whether it contains solid goods, documents, liquid, semi-liquid or another type.
- Weight (kg): weigh the parcel with its packaging and enter that packed weight. For example, 0.5 means 500 grams. Use up to three decimal places.
- Contents description: briefly say what is inside, such as Cotton shirts or Printed documents. This is required, up to 200 characters.
- Liquid quantity (litres): appears for liquid or semi-liquid contents. Enter the quantity as well as the packed weight.
- Litres do not replace kg. The service price still uses the packed weight.
- Select Add package for another parcel. Enter that parcel’s own contents and weight. Remove package removes only that extra draft parcel.
- You can add up to 50 parcels. The price calculation uses their combined packed weight.
- Scroll inside Parcel and Billing to reach the billing and attachments sections below the parcel and service fields.

Step 3 - Choose the service

- Destination: choose the destination covered by the available rate setup. It is a pricing destination, not a substitute for the receiver’s full address.
- Service: choose the service the customer has agreed to buy. The named service is shown again during review.
- If the service is missing, an authorised owner or administrator can open Add service inside the booking.
- An operator who cannot publish rates should ask an administrator to add the service. Do not use an unrelated service just to continue.
- Price changes - optional contains Freight override and Override reason. Use this only when you are authorised to change the calculated freight.
- A monthly account’s agreed rates are a separate choice. The app does not combine a named retail service with a negotiated account rate.

Inside Add service - Details, prices and review

- Service name: enter the name staff and customers should recognise, such as Local priority.
- Destination: enter the city or destination name. The matching internal code is managed automatically.
- Service category: select Standard, Express or Same city. Existing tax rules for that category are used.
- Accept liquids and semi-liquids: enable this only if your business accepts them for this service.
- Select Continue setup to enter prices.
- How do you charge?: choose Flat charge per booking or First kg + each additional kg.
- For a flat charge, enter Charge per booking (₹). For a weight-based charge, enter First 1 kg (₹) and Each additional kg (₹).
- Additional weight rounds up to the next whole kg. All parcels' packed weights are added together before this calculation.
- Packing charge (₹): enter the packing amount, including zero when no packing charge applies. These service prices exclude tax.
- Continue setup and check the service name, destination, category and prices. Tick the review confirmation, then select Save and use service.
- The booking details remain while service setup is open. Return to booking or Cancel setup goes back without using an unfinished service.
- If this is the first service, the app also publishes a first rate card with a one-year period, 10-minute quotes and no ordinary price override. Read and confirm this before saving.
- The first rate card may take a short time to become active. Wait for the saved result. If prompted, use Retry same service request.
- A separate active tax policy is still required. Service setup does not choose a new tax treatment for you.

Step 3 - Billing and tax details

- Bill-to account: keep the booking's customer for a normal sale, or select a linked monthly account when that customer has agreed account billing.
- The selected account may have a credit limit, hold or overdue restriction. Choosing it does not remove those restrictions.
- Payment choice: choose Pay later or Received at counter. This records the booking choice; it does not by itself record money.
- Payment method: when Received at counter is chosen, select the actual method offered, such as Cash or UPI.
- GST registration: select whether the service customer is GST registered.
- For a GST-registered customer, enter Billing state and GSTIN. Use their real billing details, not the parcel destination by guesswork.
- Parcel handed over in: choose the state where the parcel is actually handed over for this service.

- Tick I checked these billing and handover details with the customer only after checking those facts.
- The app now records the selected customer reference and this confirmation automatically. You do not type service-recipient or tax-evidence IDs in this booking form.
- Select Calculate booking price. Review delivery charge, packing, GST and total payable.
- Changing a relevant customer, service, parcel or billing detail can require the price or confirmation to be checked again.

Step 3 - Attachments

- Add supporting files in Attachments before you save: for example, an invoice PDF or a photo of the packed parcel.
- Supported files are PDF, JPEG, PNG, MP3, WAV and MP4.
- Each file must be nonempty and no larger than 8 MiB. A booking can have up to 10 files, with a combined limit of 32 MiB.
- Selected files stay on this device until the booking is saved. Ready to upload after booking does not mean the file has been stored yet.
- Remove a draft file if you selected the wrong one. Files are checked after upload before they become available.
- If a file fails after the booking saves, retry that attachment. Do not create the booking again.
- Closing or changing scope can discard files that have not been uploaded. Read the leave/discard message before confirming.

Step 4 - Review and print

- Check the sender, receiver, full address, parcel count and combined weight.
- Check the actual named service and who will be billed. A monthly account should show the intended account name.
- Review delivery charge, packing, GST and final total. Use the Edit links to correct a section.
- Check that the selected attachments are the right files. They upload after the booking is saved.
- Create booking saves the booking. Create booking & print saves it and then loads the saved receipt for printing.
- Check each parcel’s docket number and weight. The booking reference is created automatically.
- Wait for the saved confirmation. A saved booking is not automatically a completed delivery.

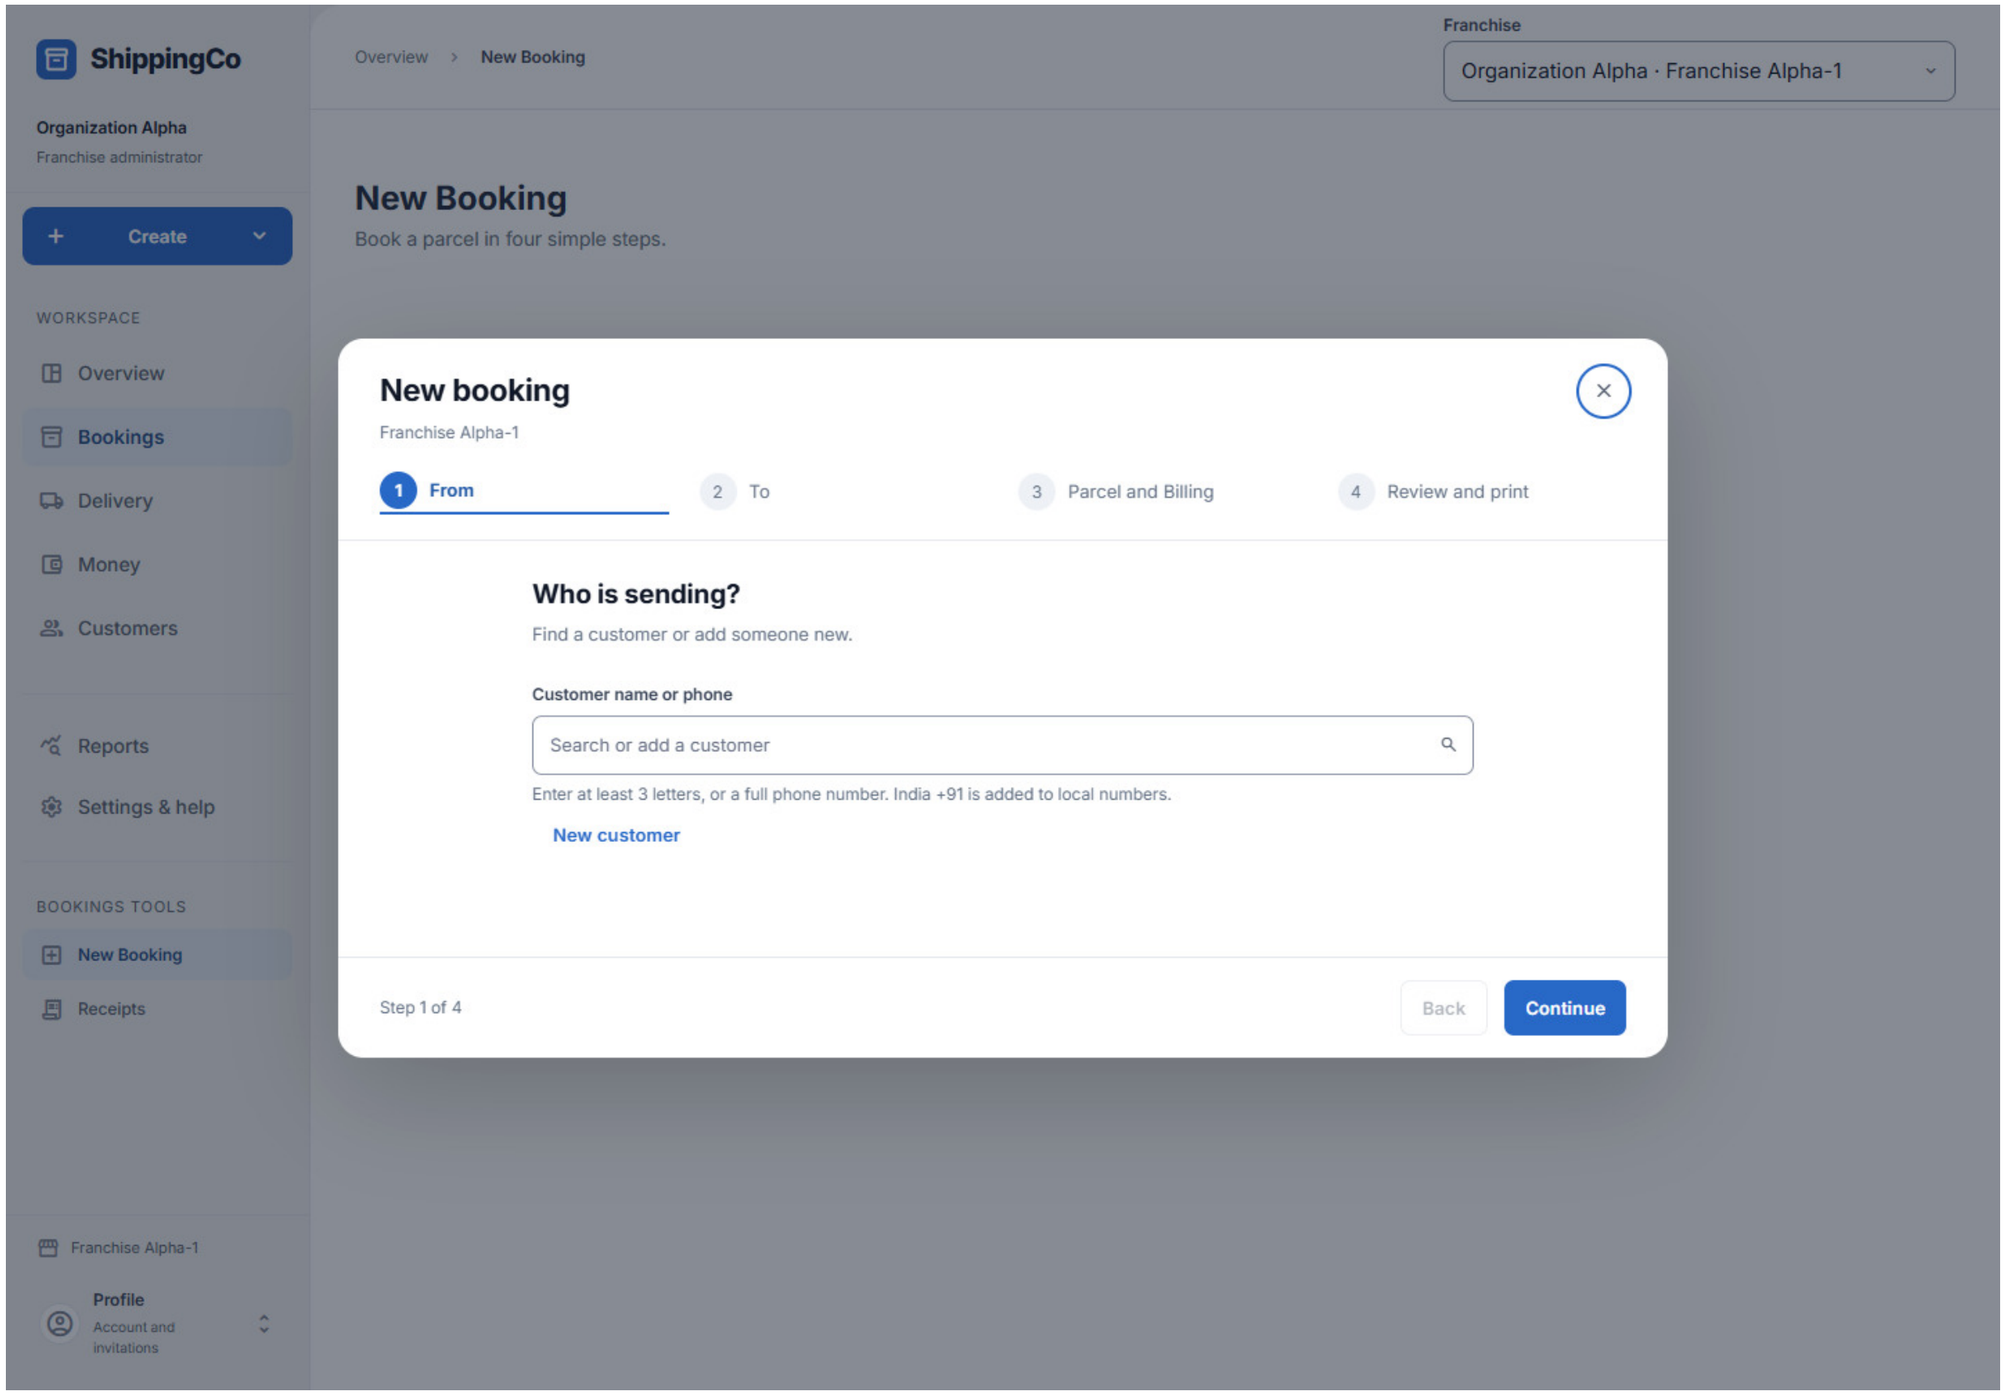
After saving

- The confirmation shows the parcel tracking numbers, booked total and outstanding amount at booking confirmation.
- If money was received, select Record received money and complete the actual receipt flow. See Money received for receiving account, amount and allocation details.

- Print booking receipt loads the saved receipt. A print failure does not undo the booking; retry printing instead of booking again.
- Wait for attachments to show their saved result. Retry failed uploads on this booking.
- Start another booking opens a fresh form when pending payment and file work is resolved.
- For a lost save response, use the same booking retry. For an expired price, calculate the price again. For an account restriction, resolve the account issue before continuing.

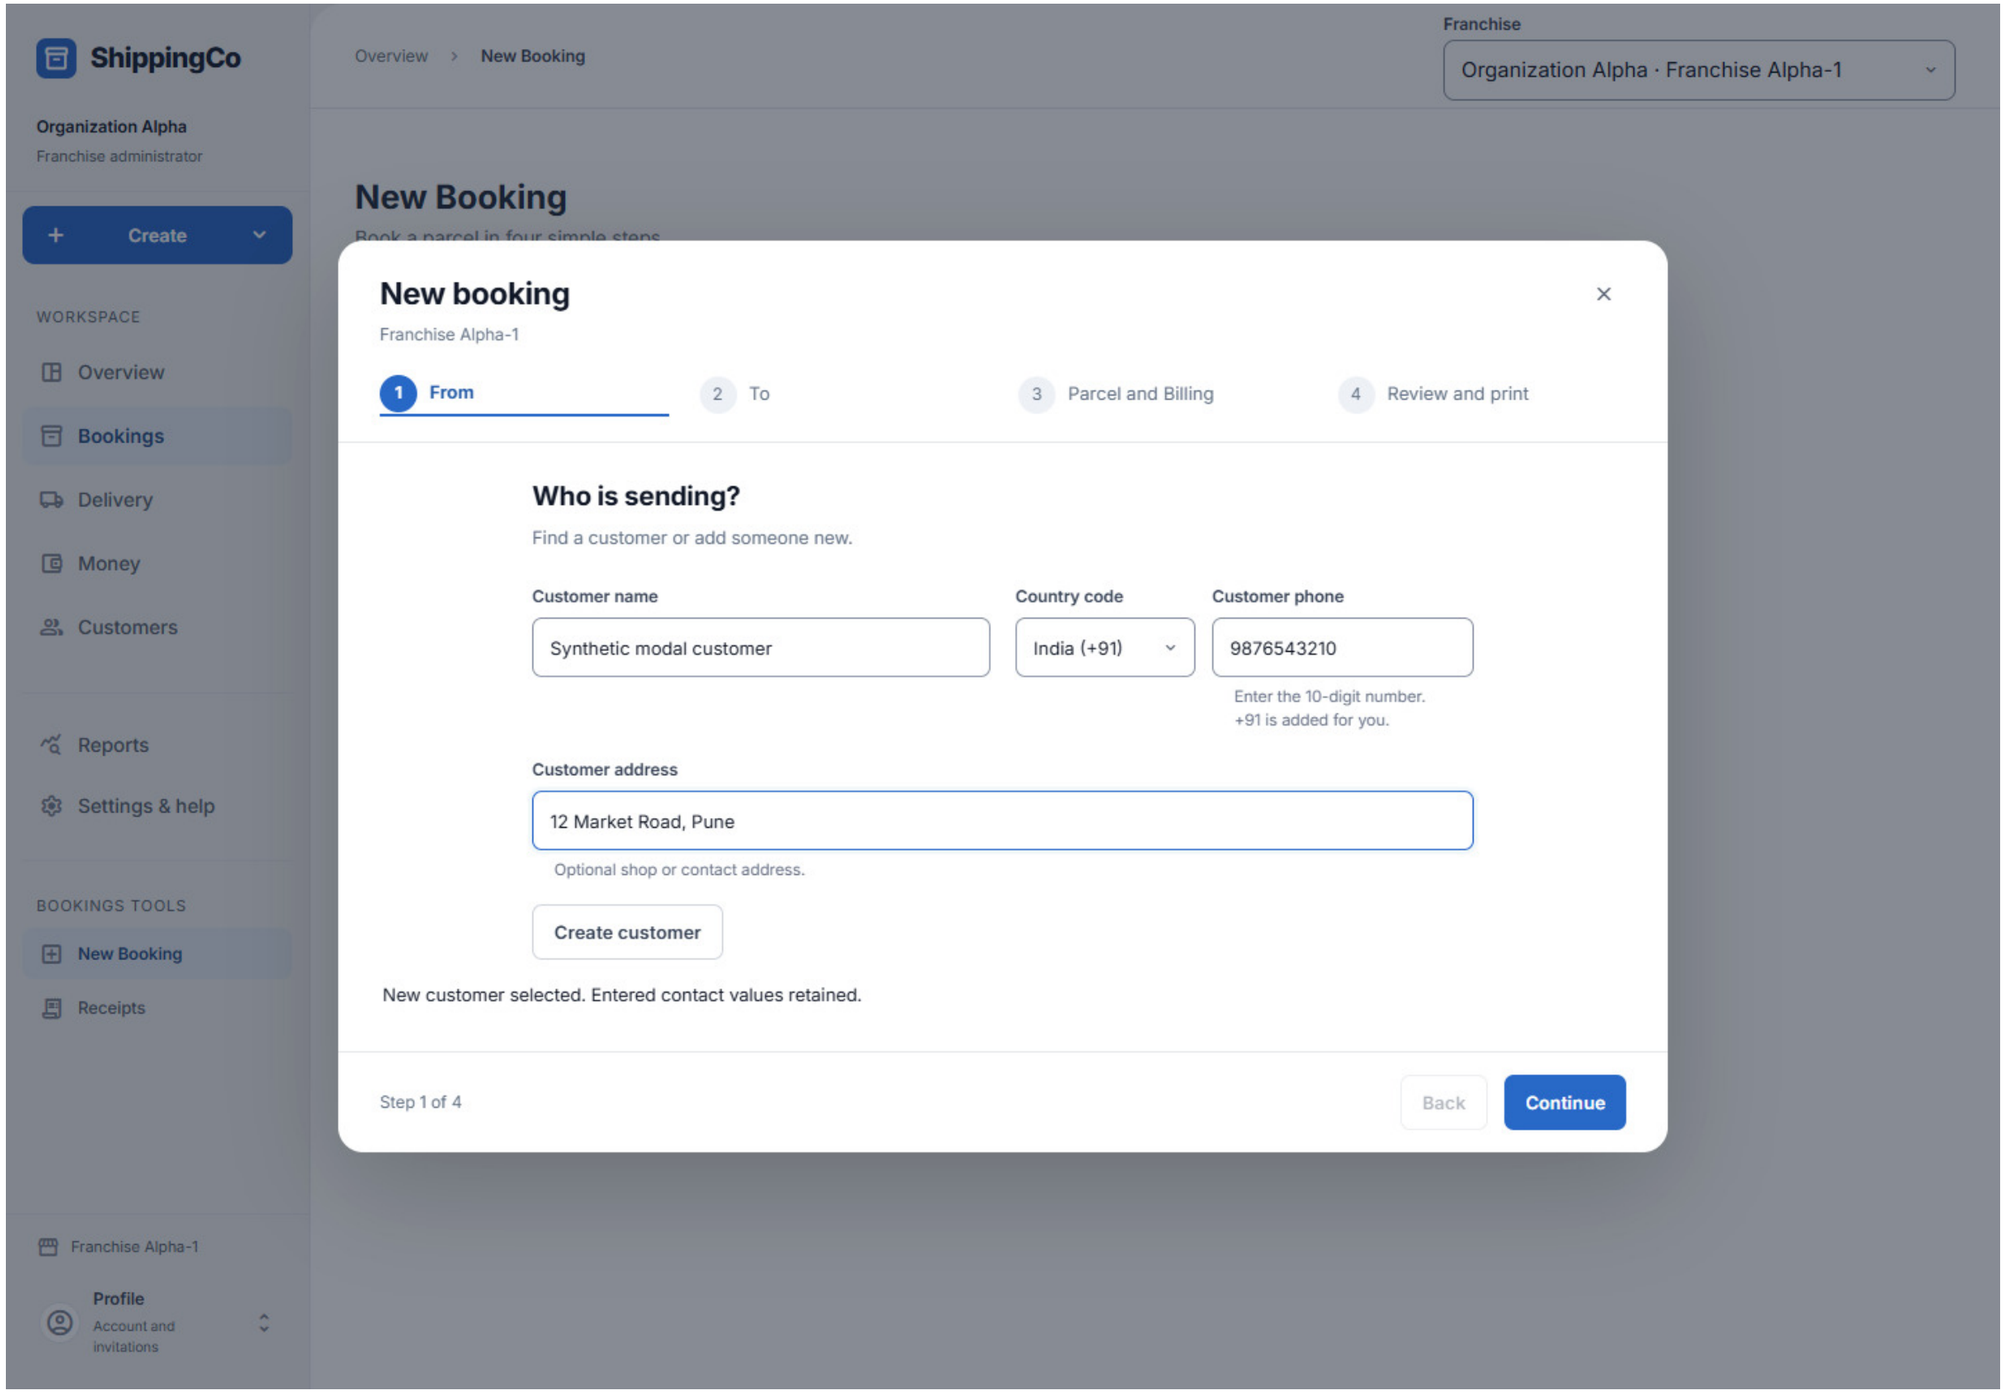
Create a booking

Step 1: search for the sender. Example screen using test records.



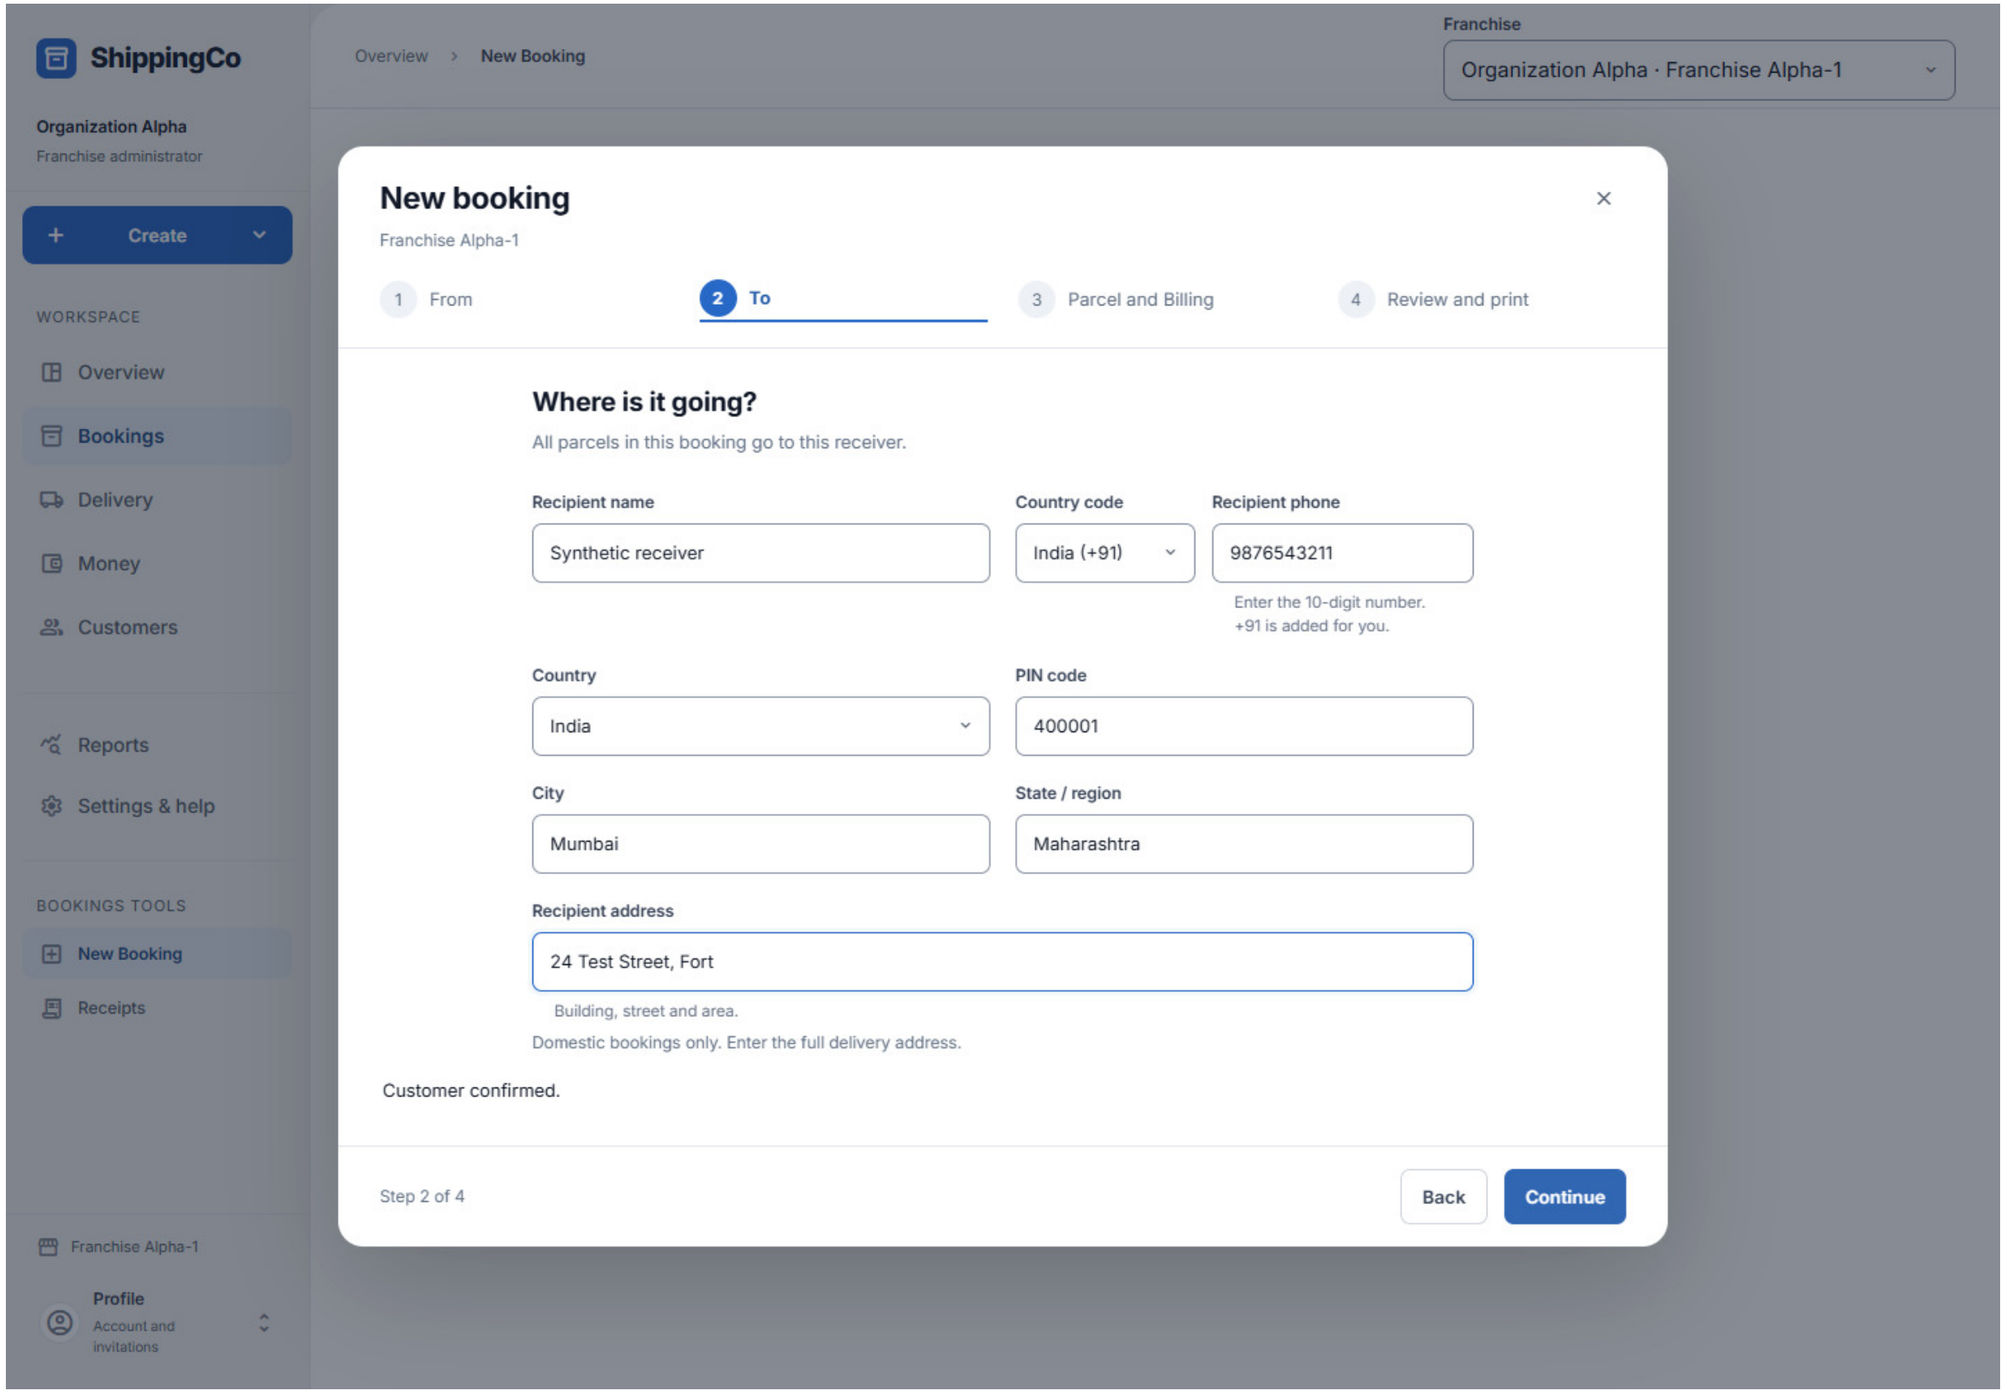
Create a booking

Add a missing customer without leaving the booking. Example screen using test records.



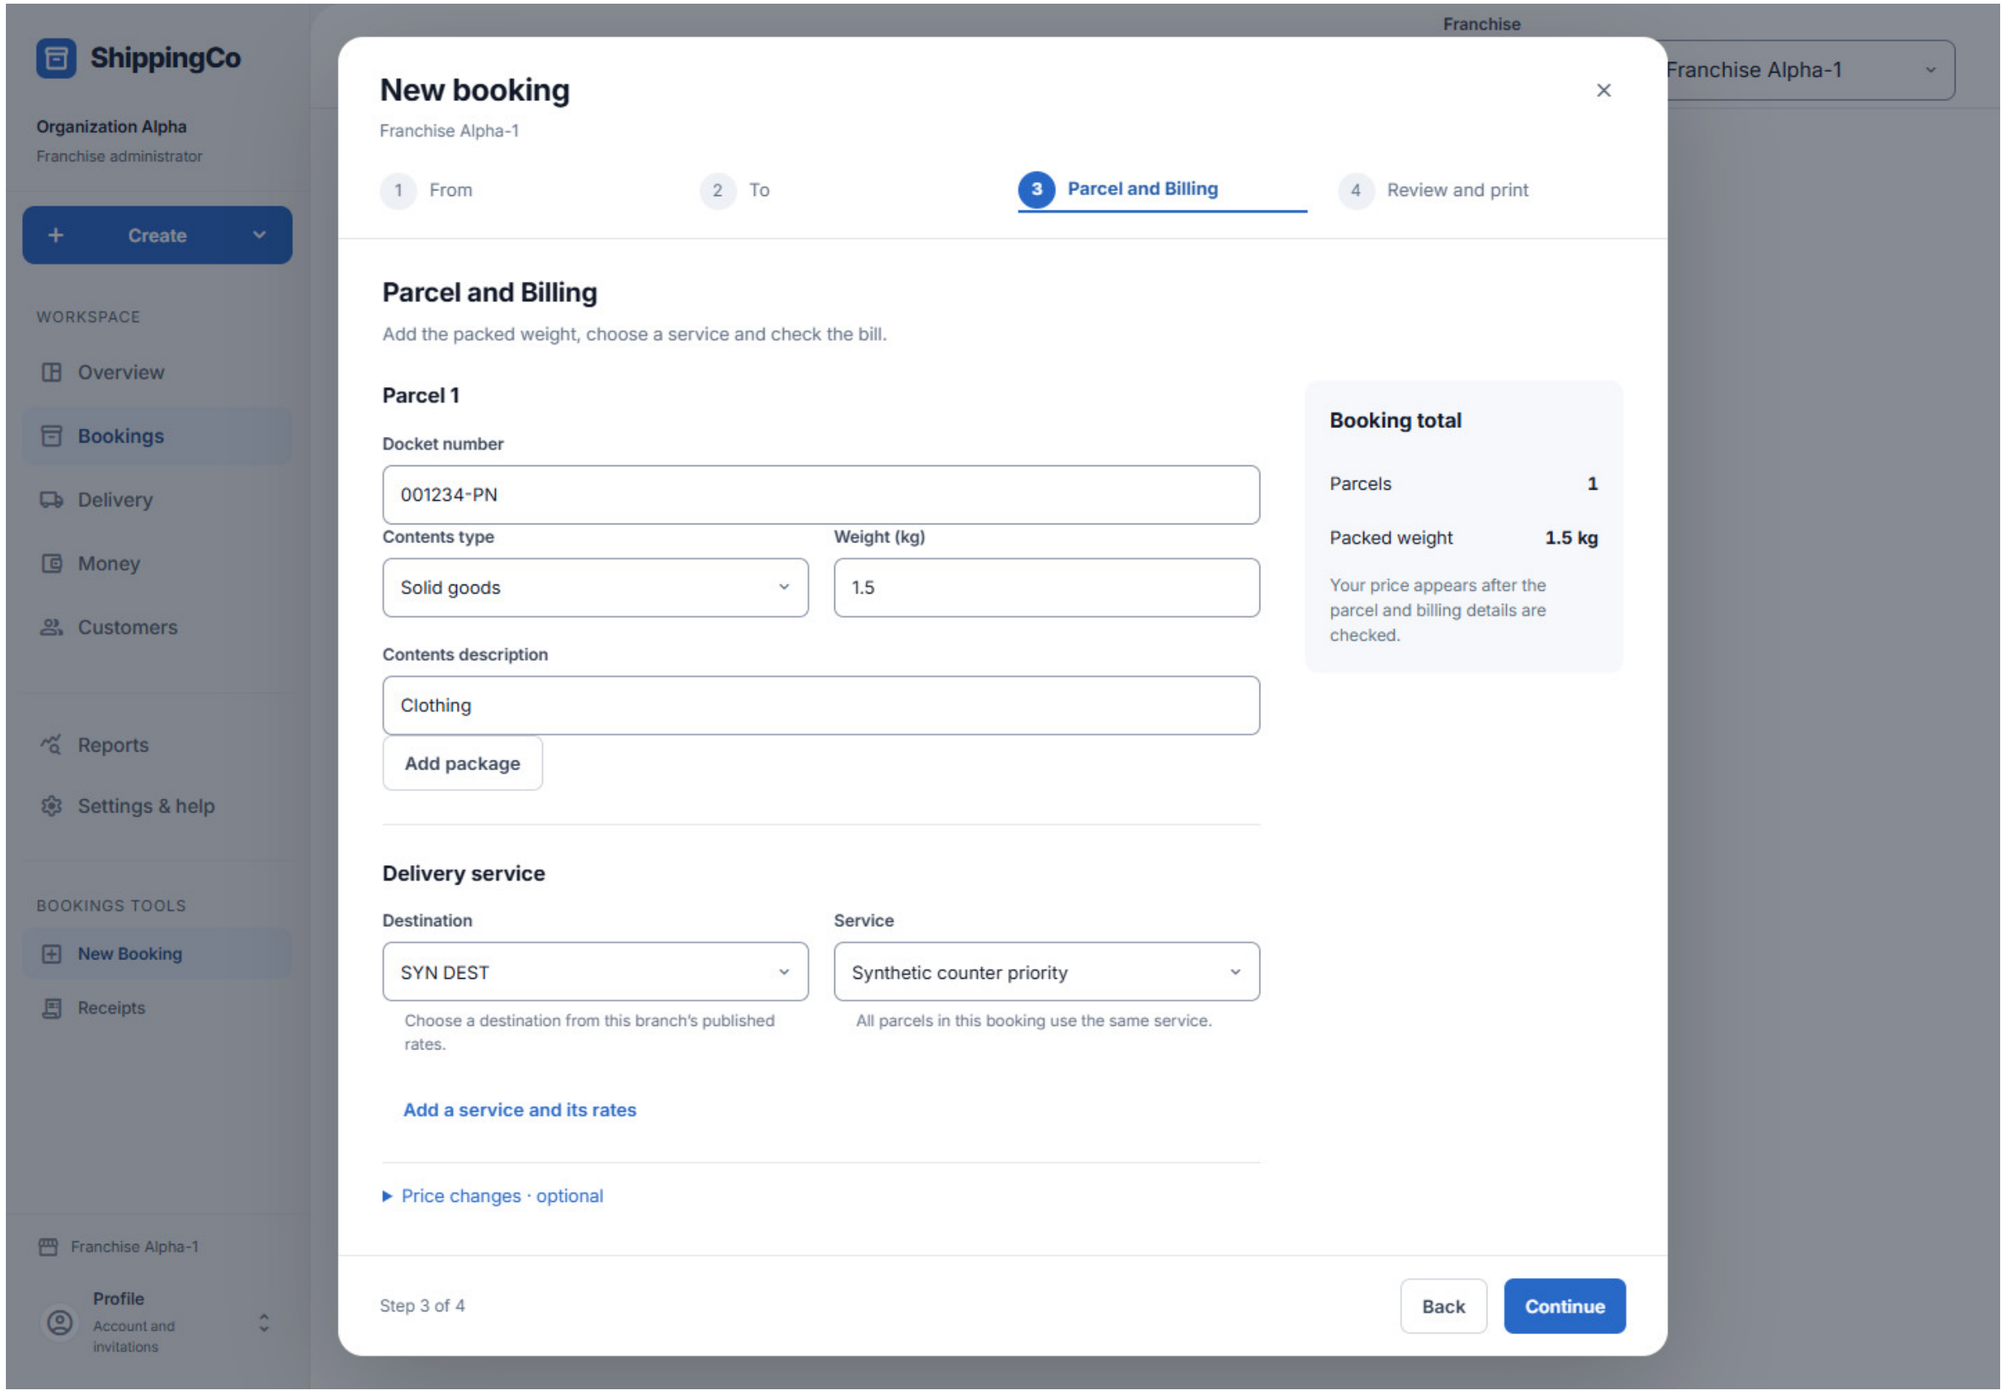
Create a booking

Step 2: enter one complete receiver and delivery address. Example screen using test records.



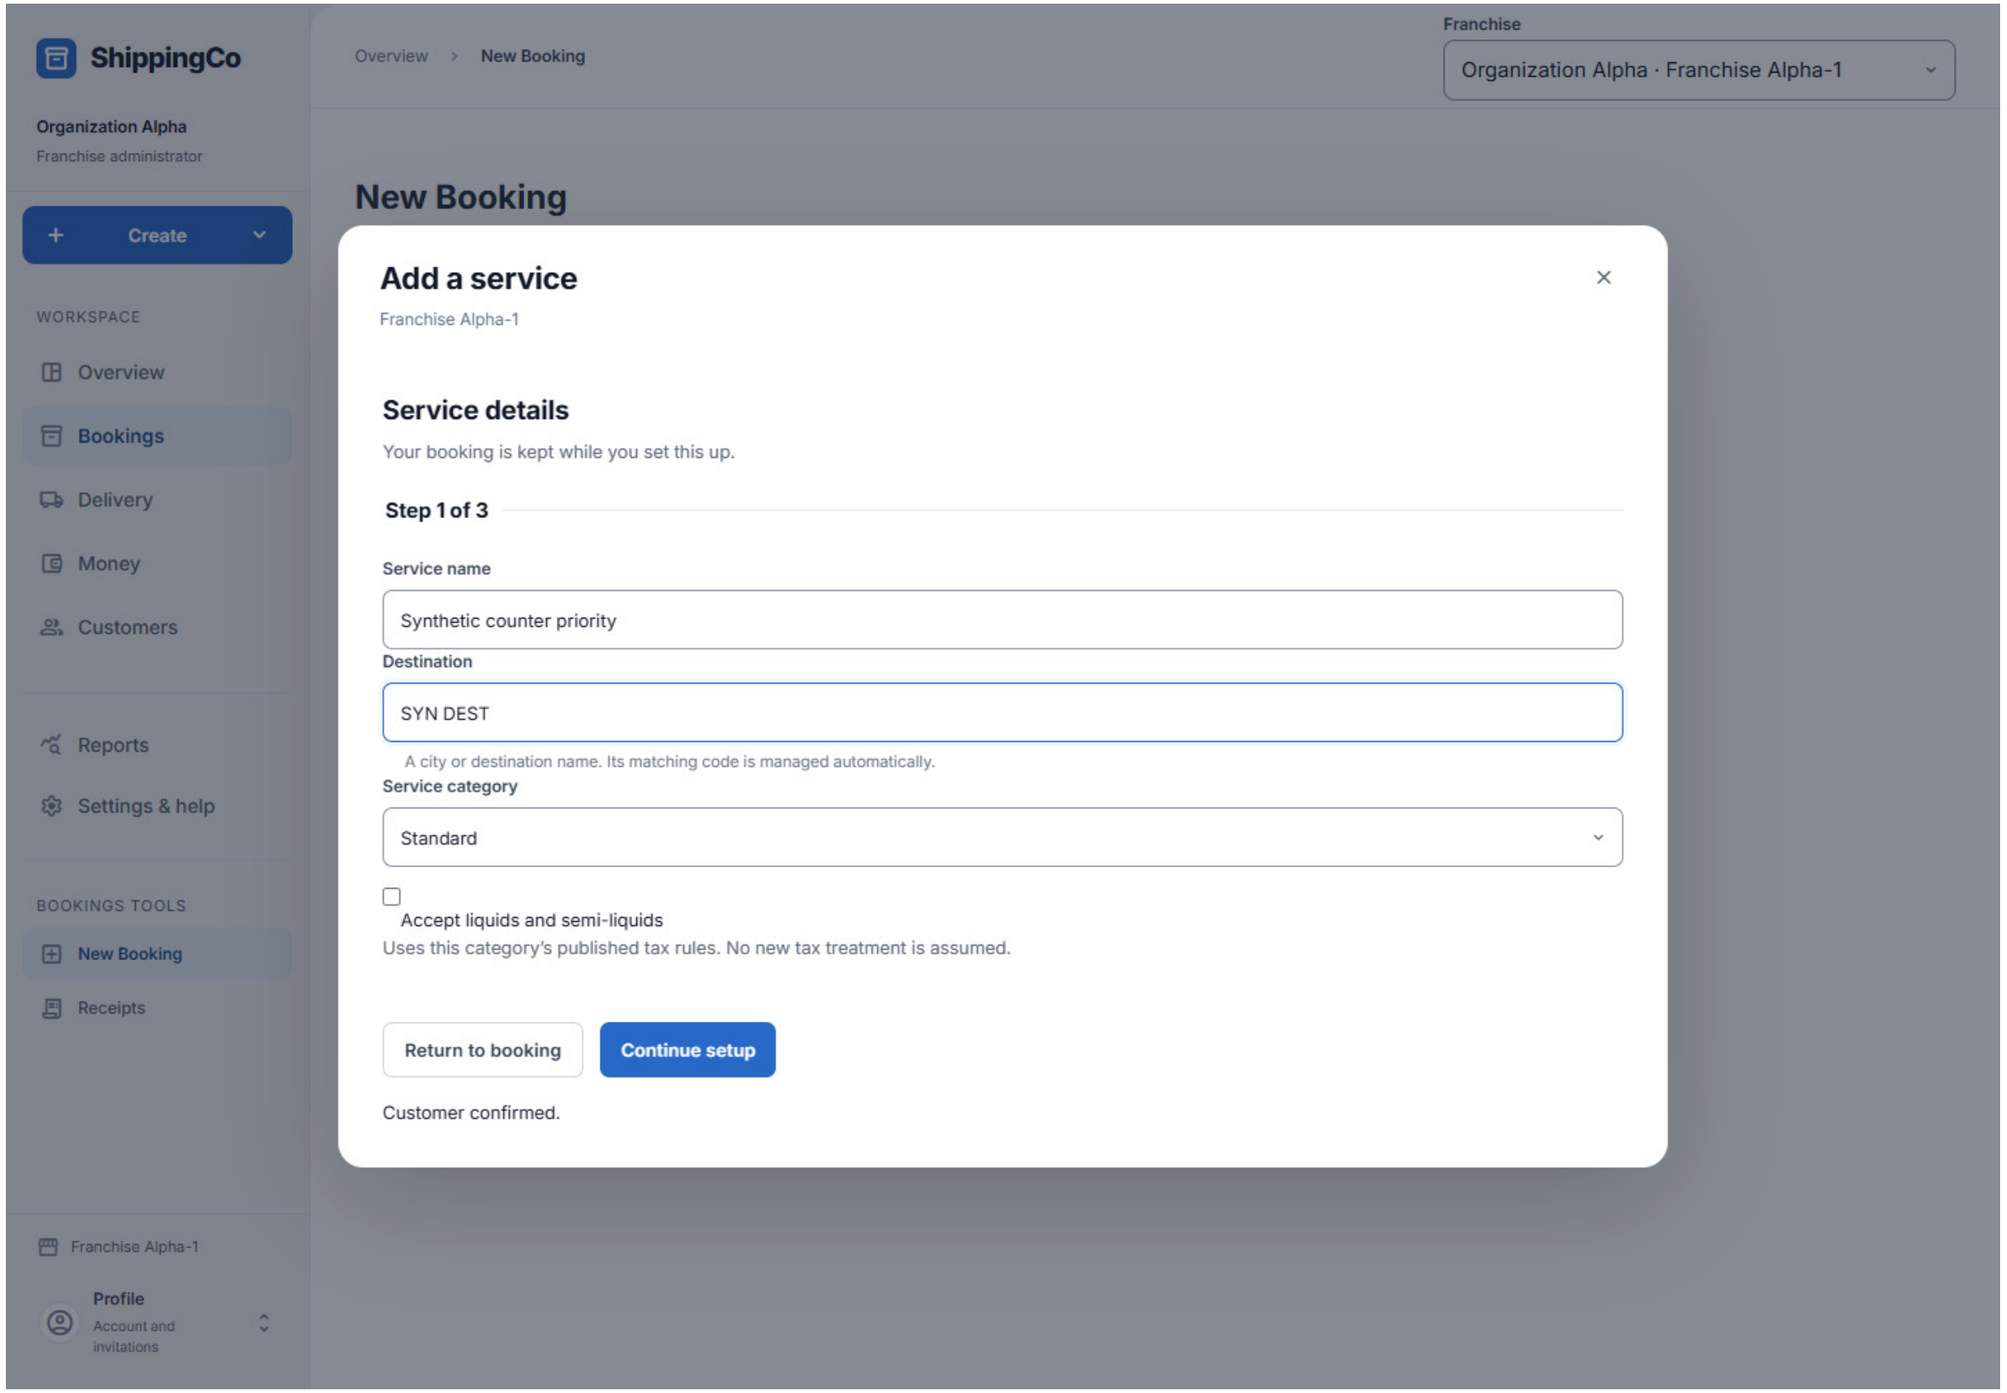
Create a booking

Step 3: add parcel details and choose the service. Billing and attachments are further down this form. Example screen using test records.



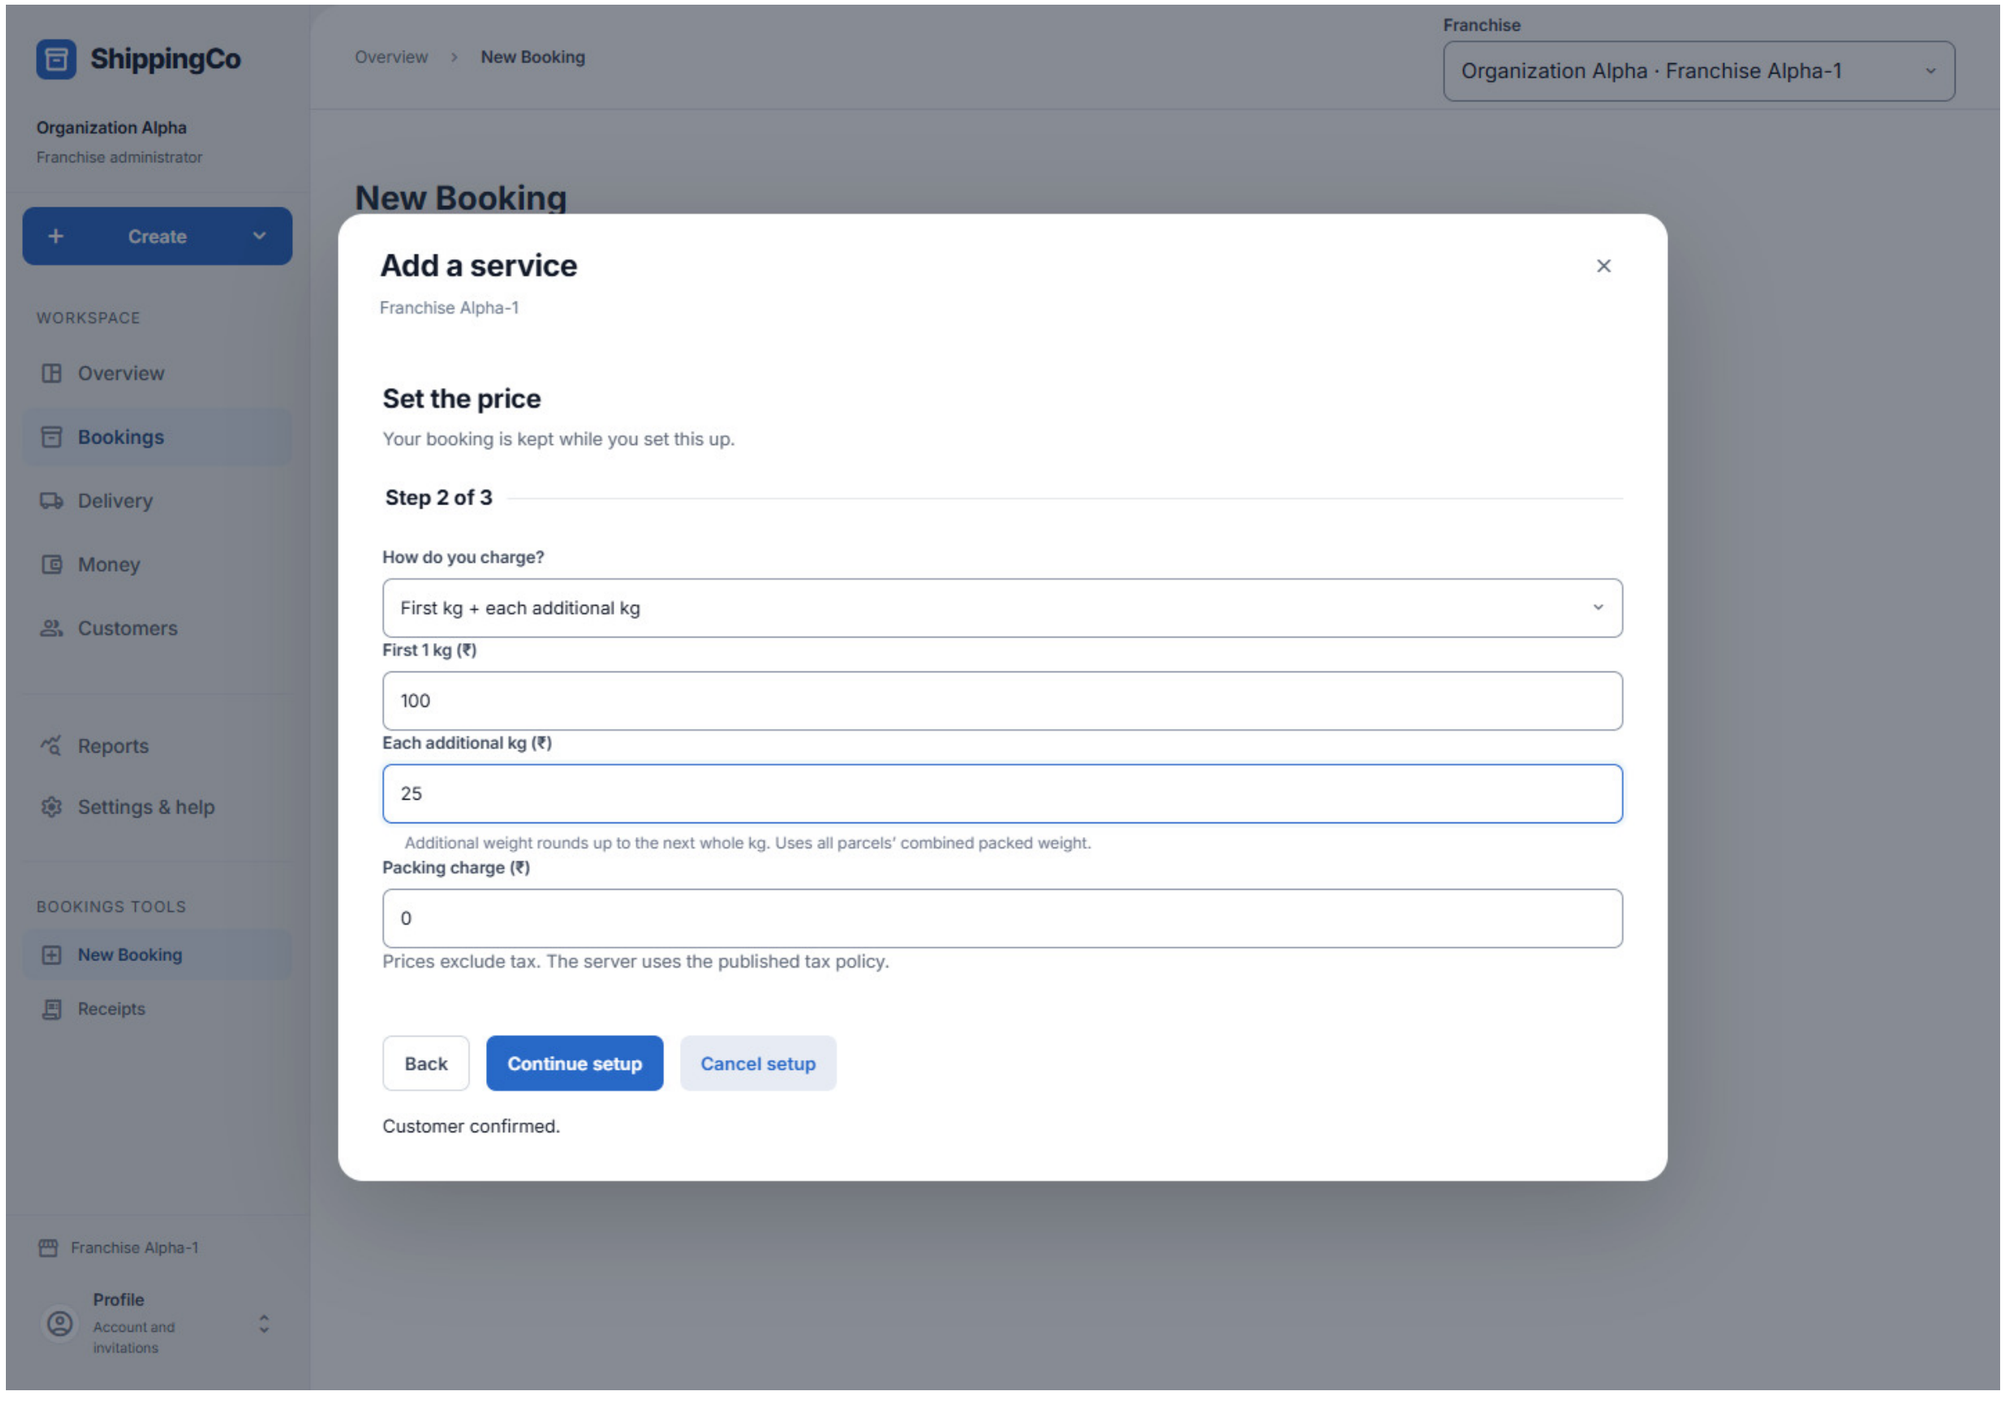
Create a booking

Inline service setup: name the service and choose its category. Example screen using test records.



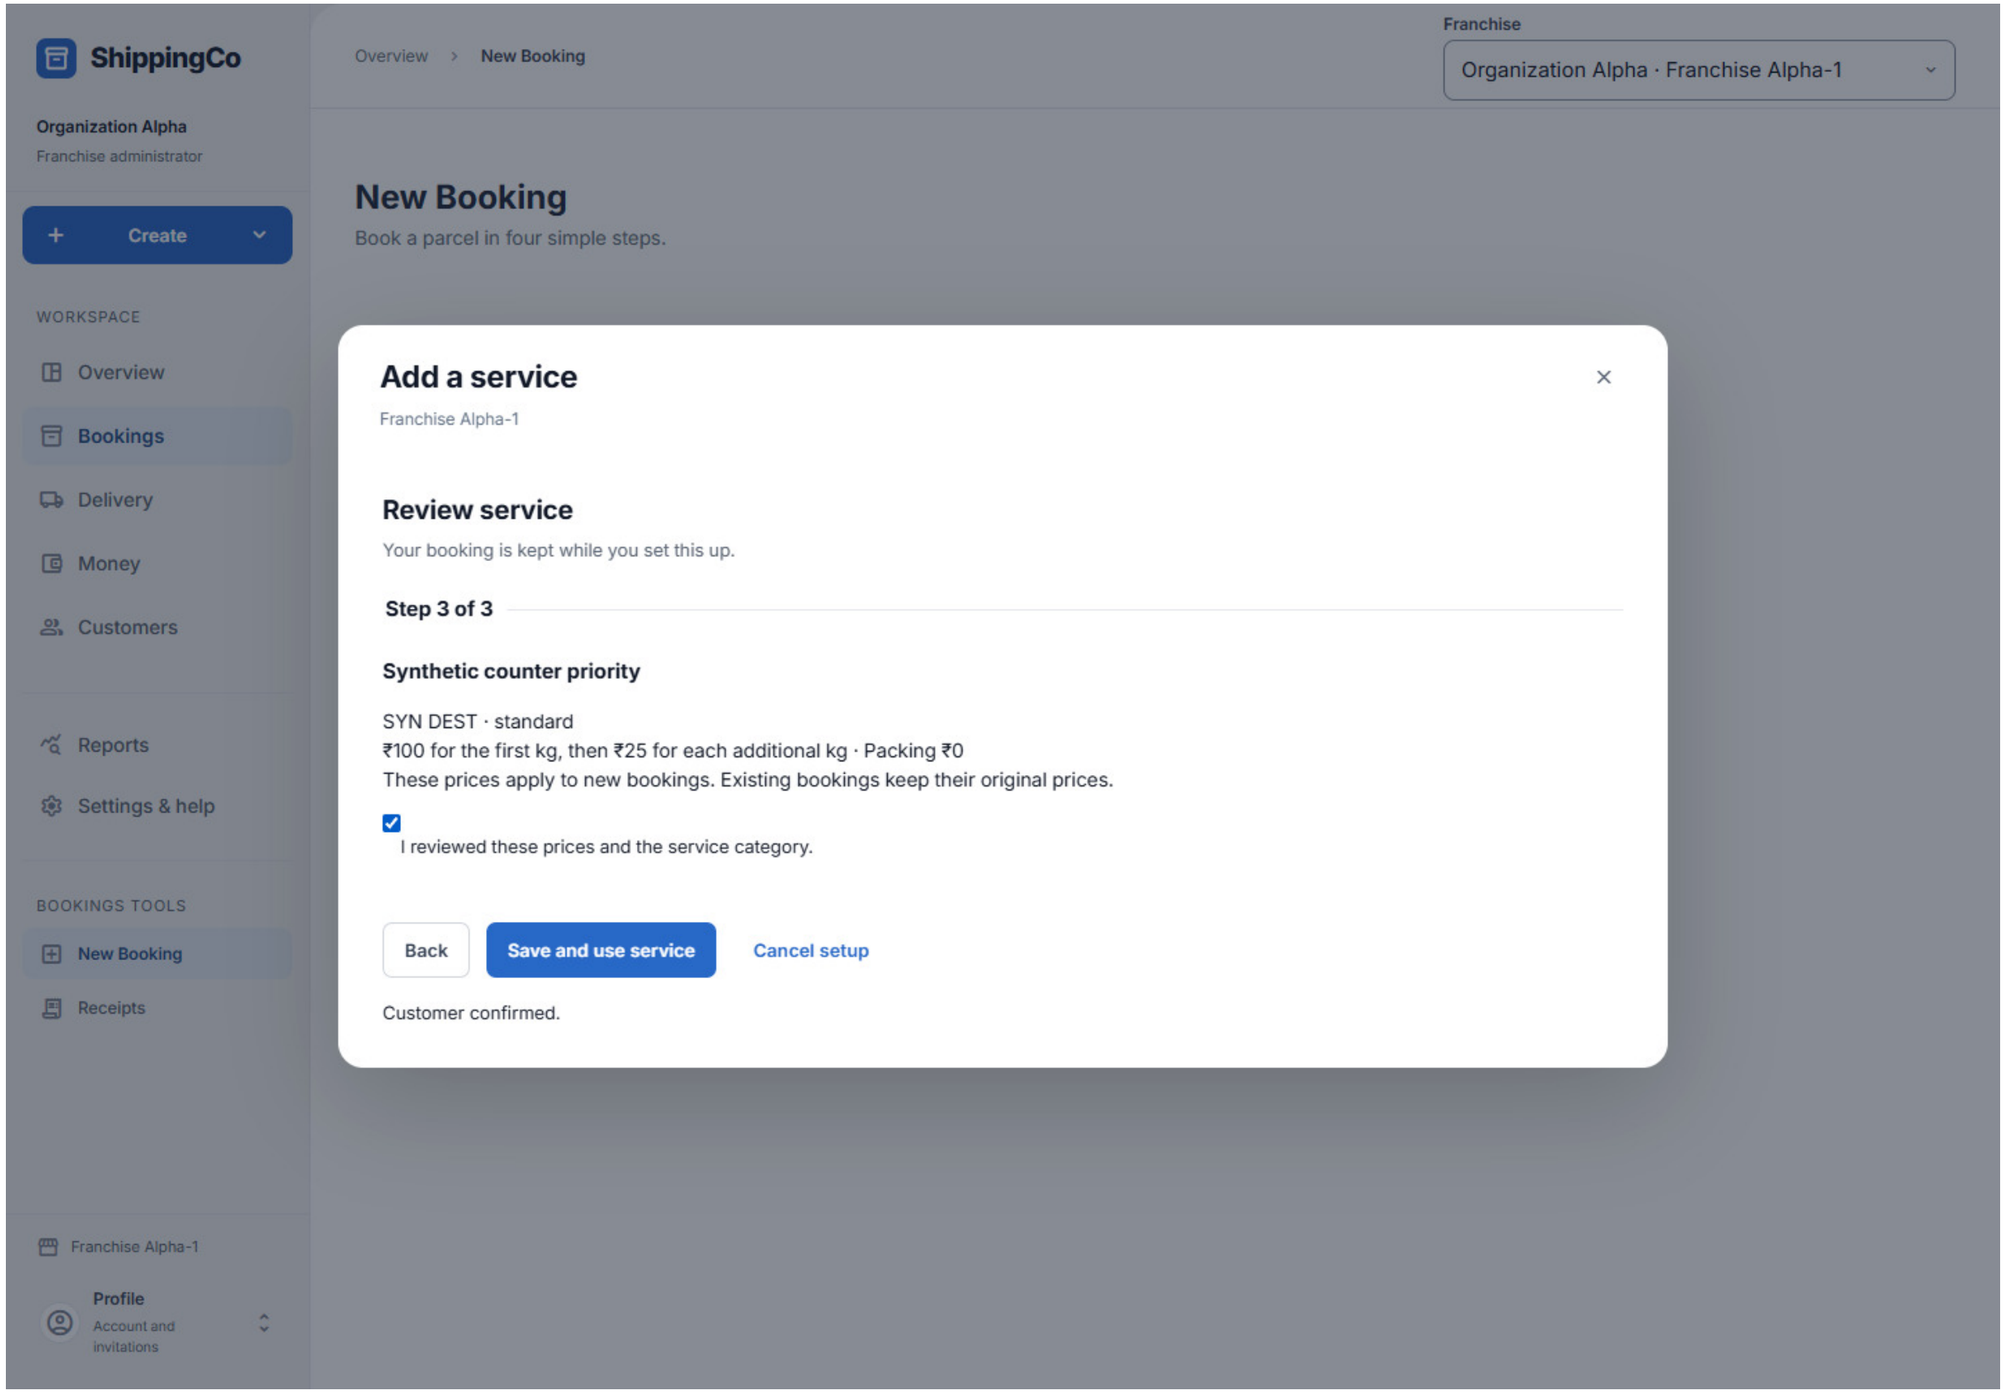
Create a booking

Inline service setup: enter the actual selling prices. Example screen using test records.



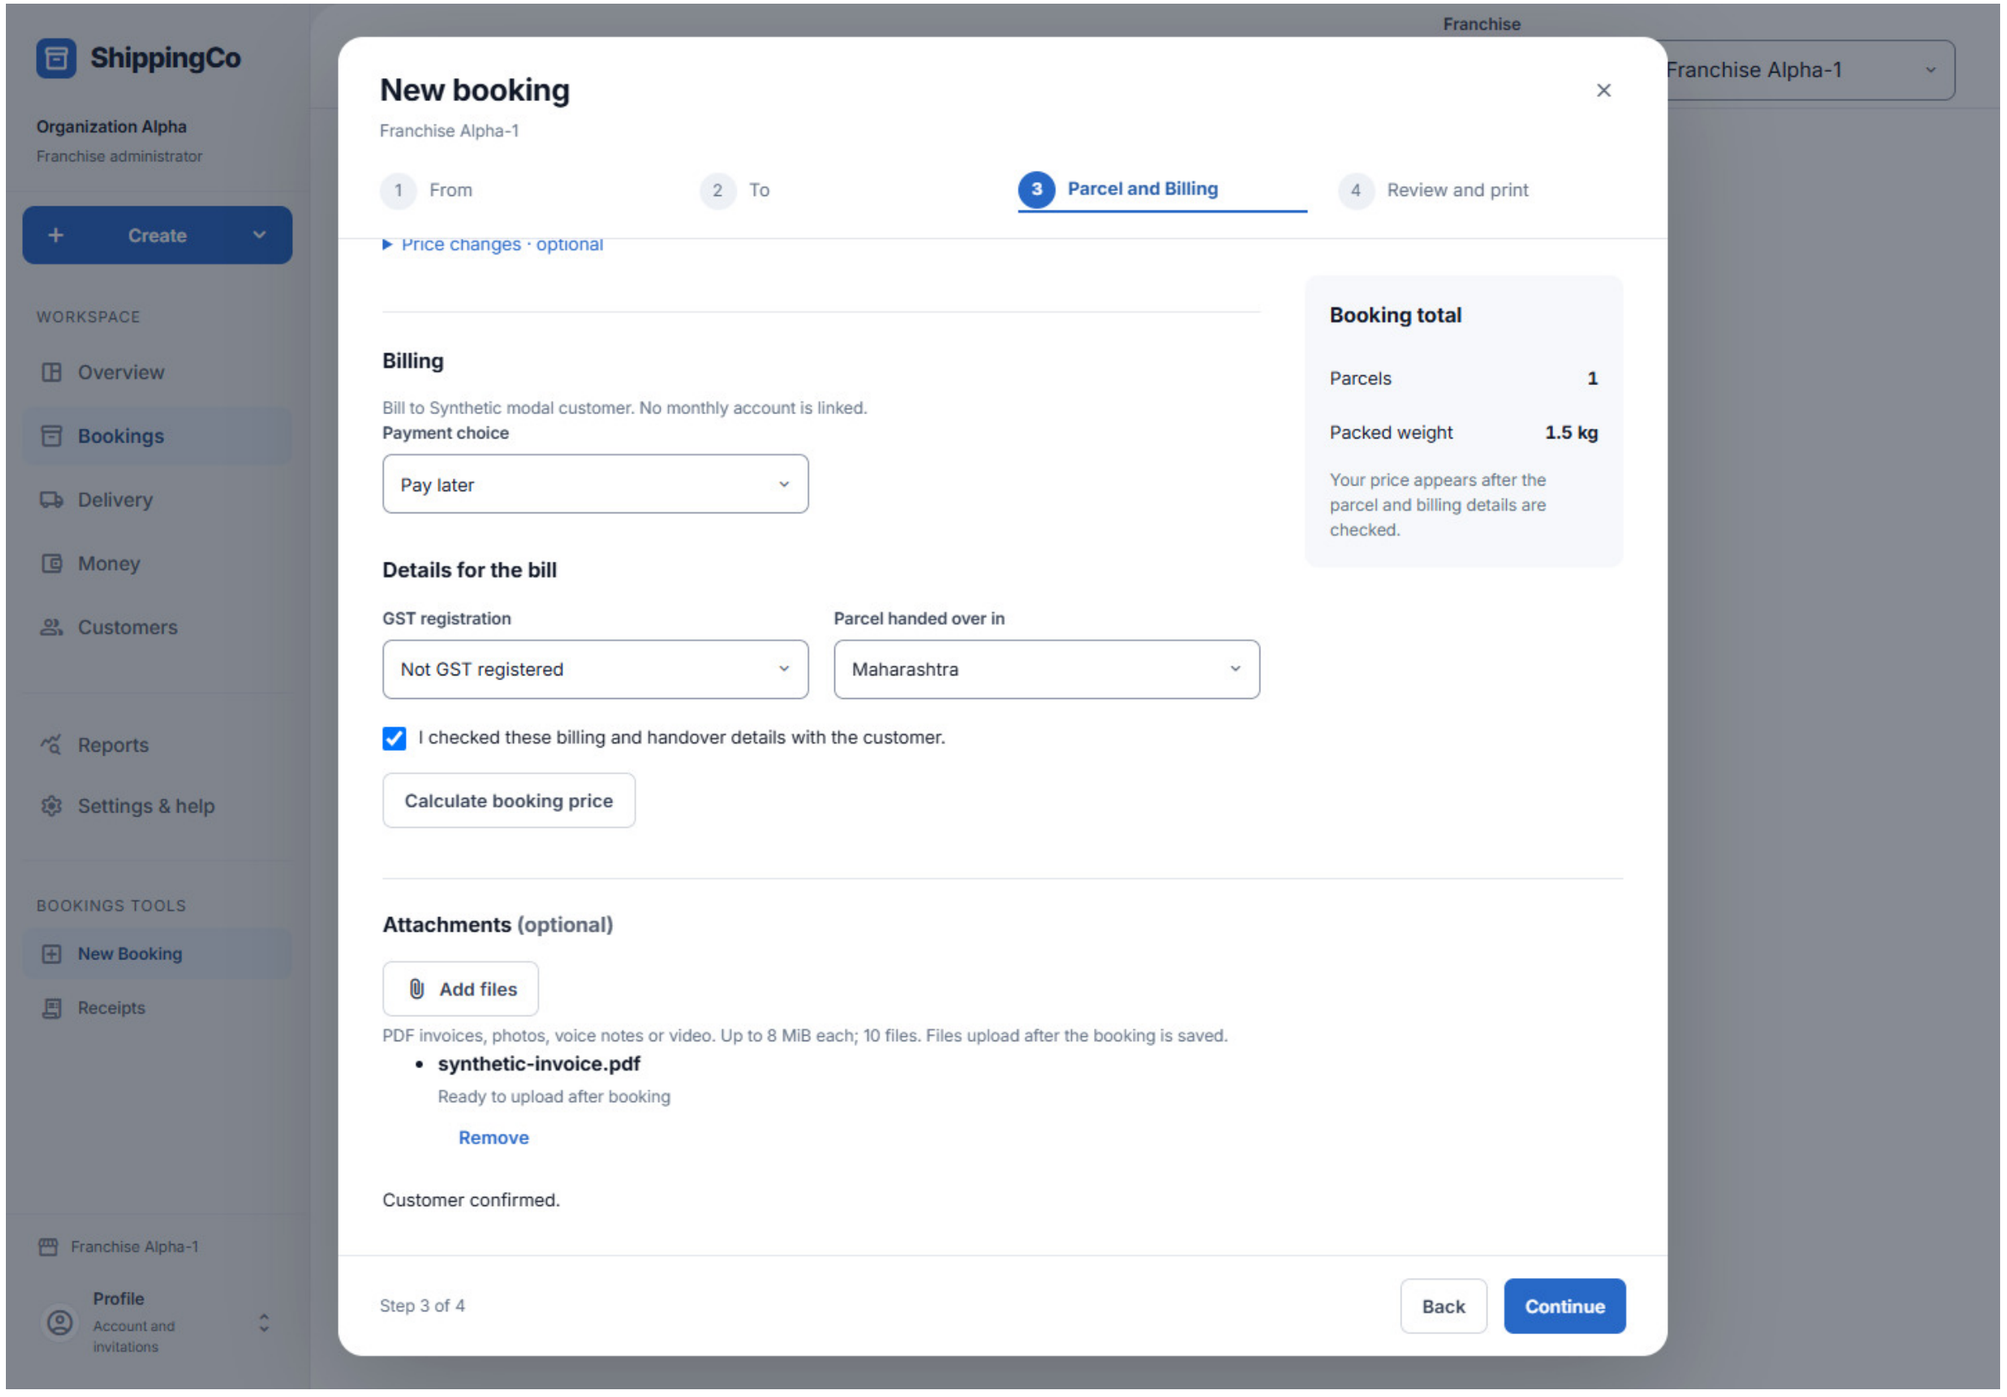
Create a booking

Review the service before saving and returning to the booking. Example screen using test records.



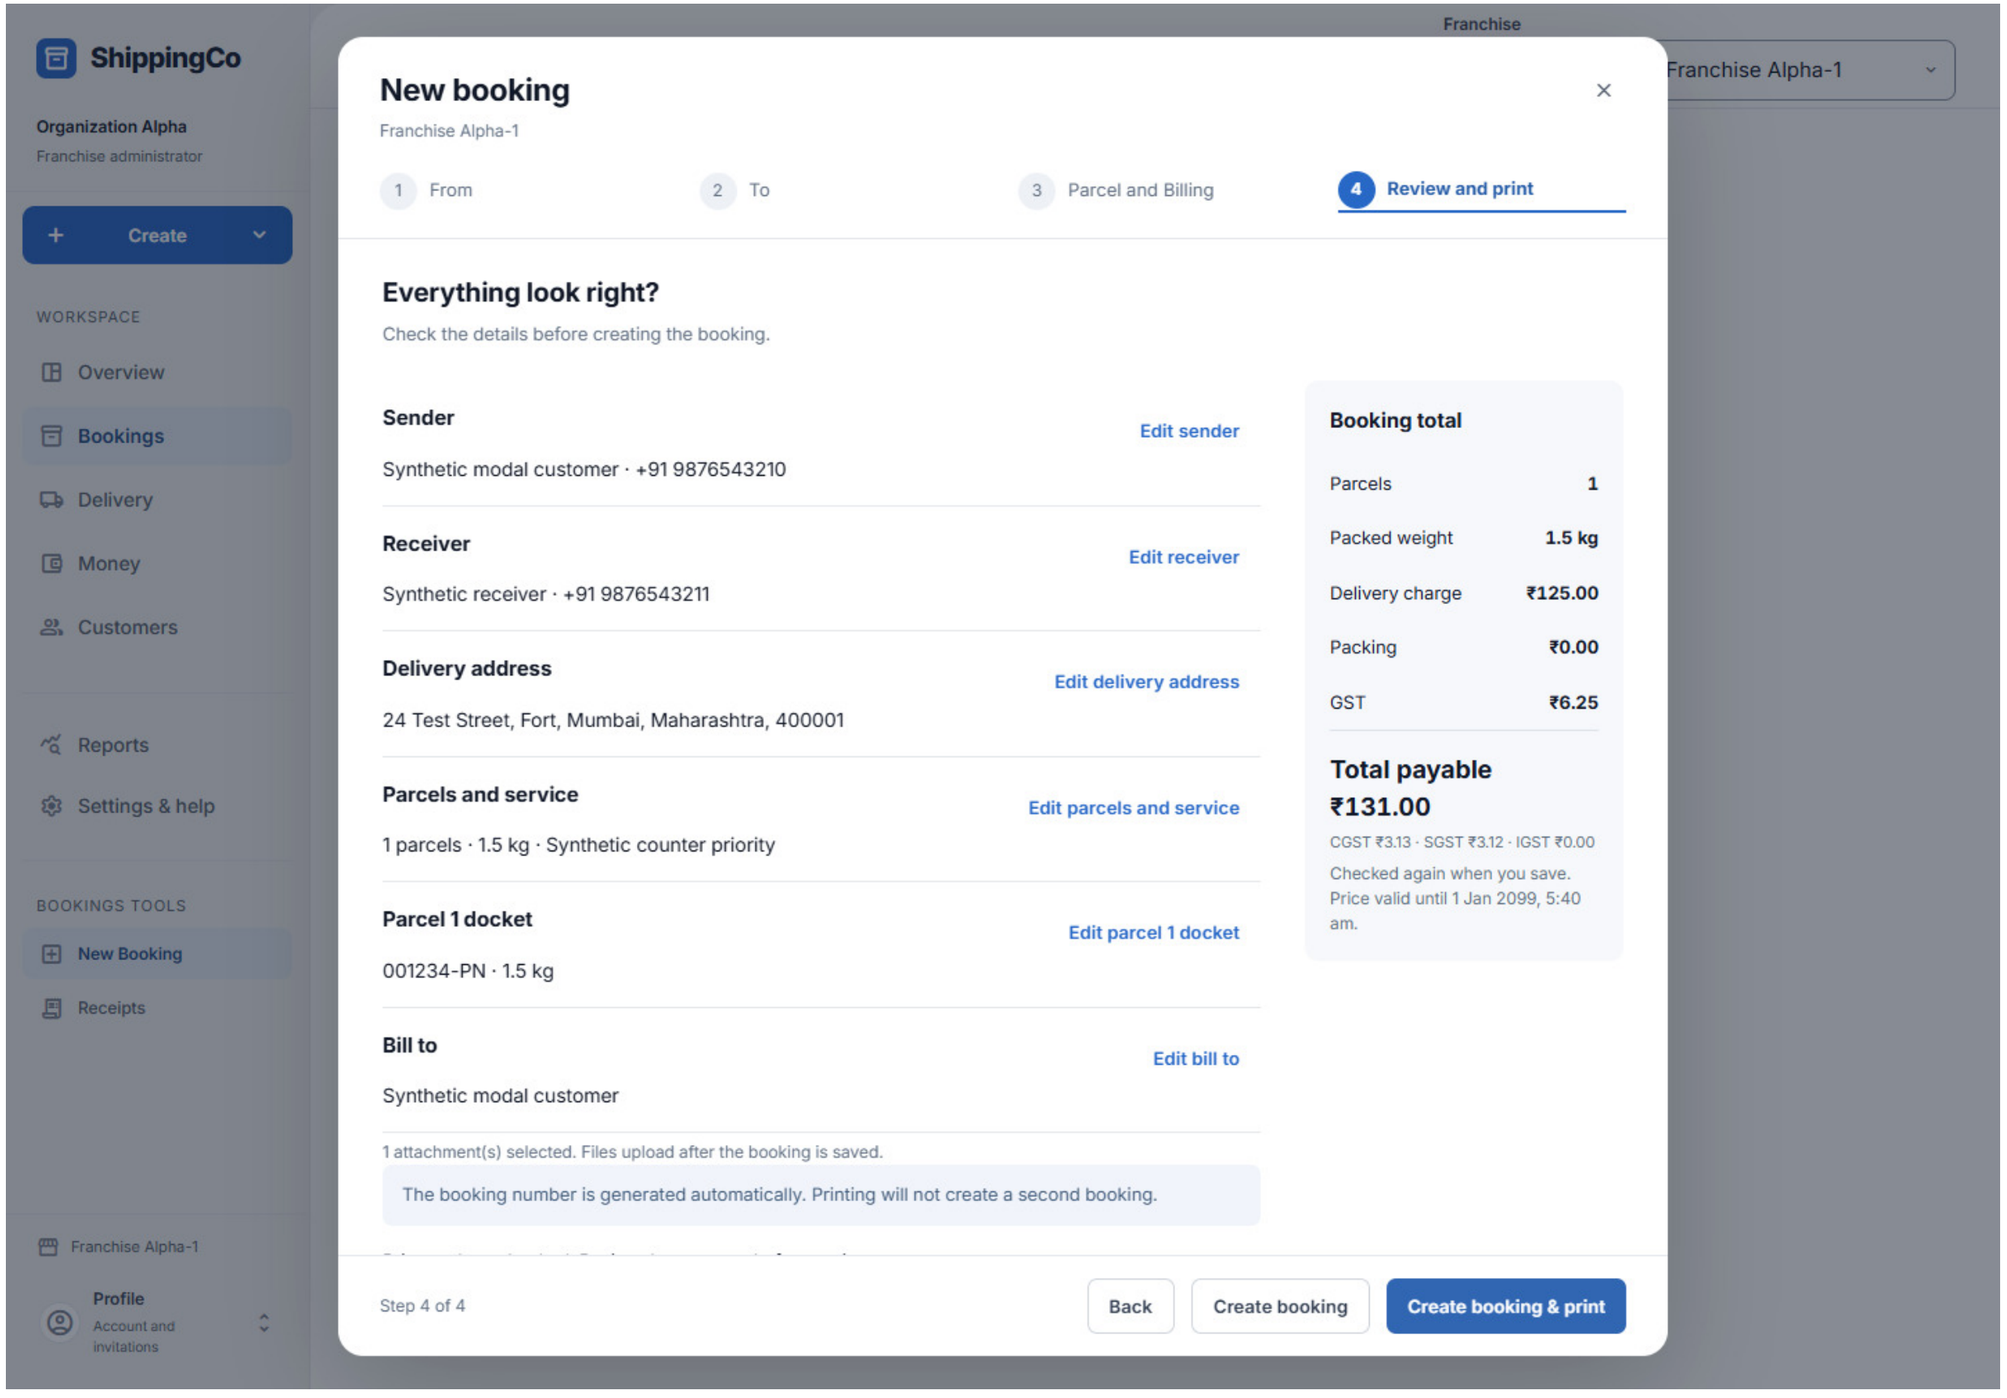
Create a booking

The lower part of Step 3: billing confirmation and selected attachments. Example screen using test records.



Create a booking

Step 4: check the chosen service, bill-to customer and calculated total before saving. Example screen using test records.



Set up a rate card

Set the prices a branch can use for bookings. Only an authorised owner or administrator can publish them.

Choose the right setup route

- For one new named service, use Add service inside New booking. It supports a flat price or first-kg plus additional-kg prices.
- For a complete dated price-band rate card, open Settings & help, then Rate card in Booking setup.
- The rate-card editor has three steps: Dates and business, Prices, then Review and publish.
- Have the actual approved selling prices ready. The app does not supply a selling price for your business.
- Only one policy editor is open at a time, so opening Tax policy closes the rate-card panel.

Step 1 - Dates and business

- Effective from: choose when these prices start, using the local time shown on your device. The start must still be in the future when published.
- Effective until: choose when these prices stop. The end time is excluded; the next rate card can start at that exact time.
- A new period must not overlap an existing published period. Check the current period shown above the form.
- More options - quote validity and review records contains less common settings. Leave the panel closed when its defaults fit the approved setup.
- Quote validity (seconds): how long a calculated quote remains usable. The convenience default is 600 seconds, or 10 minutes.
- Approval basis: Review when publishing records who publishes and when. Existing approval document is for a real approval you already have.
- Approval reference appears only for an existing approval document. Enter that real document’s reference; it is not a government approval number.
- Source basis: choose Entered directly in this form or Existing source document. A source reference is needed only for a document that actually exists.
- Allowed price adjustment (₹): the ordinary adjustment limit before extra approval. The default is zero. Use the business’s authorised limit.
- Select Continue to prices. No published prices change at this step.

Step 2 - Price bands and fields

- Destination key: enter the pricing destination, for example MUMBAI. Use capital letters, numbers and underscores, starting with a letter. Keep the same key for bands in the same destination.
- Service: choose Standard, Express or Same city.

- From weight (grams): the smallest combined packed weight included in the band. Enter a positive whole number of grams.
- Below weight (grams): the upper weight is not included. Leave it blank for no upper limit.
- For example, From 1 and Below 1000 covers 1 to 999 grams. A band starting at 1000 covers the next weights.
- Freight (₹): enter the fixed freight amount for the whole booking in that band. This field is not a per-kg multiplier.
- Packing (₹): enter the packing amount for the band. Zero means no packing charge.
- Add price band adds another destination, service or weight band. Remove price band removes that row from the draft.
- Avoid overlapping bands for the same destination and service. Check small, boundary and heavier weights before publishing.
- Use Back to dates if needed; entered prices remain. Select Save rate card draft when the rows are ready.

Step 3 - Review and publish

- Check the saved start and end, number of bands and every price row.
- Open Review every price band to see the complete saved row summaries.
- Tick I reviewed the dates, rules and approval references, then select Publish rate card.
- Publishing makes this version fixed. Existing bookings keep their original price evidence.
- If a correction is needed before publication, choose Revise as a new draft and review again.
- After publication, wait until the effective start before using the rates. The branch also needs an active tax policy.
- If the connection is uncertain, use Retry same request. Do not create a second draft to guess what happened.
- If publication rejects a past start or overlapping period, prepare a corrected new draft. Do not change a published version’s history.

Set up a rate card

Rate card Step 1: choose the period. Less-used options are inside More options. Example screen using test records. | Screen section 1 of 3 (slight overlap keeps text readable).

Set up a tax policy

Set the branch’s reviewed tax identity and rules. This guide explains the form; it does not choose a tax treatment for your business.

Before you start

- Open Settings & help, then Tax policy in Booking setup. Publication requires an authorised owner or administrator.
- Keep the supplier’s actual GSTIN, state and reviewed tax rules ready.
- The current tax setup is a states-only domestic pilot. Union Territories and special cases outside its supported setup need a separate supported process.
- The three steps are Dates and business, Tax rules, and Review and publish.
- The rate-card and tax-policy periods must overlap when a booking is created.

Step 1 - Business identity and dates

- Effective from and Effective until: choose a future starting time and a later ending time. Avoid overlap with the current published policy.
- Supplier state code: choose the state of the supplier issuing the bill. Do not choose the receiver’s destination state just to change the tax result.
- Supplier GSTIN: enter the supplier’s 15-character GSTIN. Its state prefix must match the supplier state.
- More options contains Quote validity (seconds), Approval basis and Source basis.
- Review when publishing records the publisher’s review. Use Existing approval document only when a real approval document exists.
- Entered directly in this form describes manual entry honestly. Existing source document requires its real reference.
- Select Continue to tax rules. The entered business details remain available if you go back.

Step 2 - Use a template or enter reviewed rules

- Use a domestic courier GST template is optional. Open it and read the displayed scope, rates and Government sources and scope before using it.
- Choose the supported courier services you actually sell. Confirm the registration and service-scope statement only when it is true for your business.
- Replace tax rules with this template replaces the draft rules; it does not publish them.
- After applying the template, the panel closes and a status states how many rules were added. Each complete rule appears as a compact summary.
- Open any rule summary to inspect or change its fields. Incomplete manual rules open for entry.
- The template does not fill your supplier GSTIN or choose a booking customer’s place-of-supply facts.

- Do not use a template for an excluded or unsupported case. Have the appropriate tax treatment reviewed before publishing.

What each tax-rule field means

- Service: the service category this rule covers.
- Customer registration: GST registered or Not GST registered. Each required combination needs its own rule.
- Tax jurisdiction: Within supplier state or Between states. The booking's checked facts determine which rule is used.
- Classification reference: the reviewed service classification, such as the applicable SAC supplied by the chosen template or your reviewed policy.
- Rule evidence reference: the real source supporting that rule. The template supplies its notification reference automatically.
- Treatment: Taxable, Nil-rated or Exempt. Use the reviewed treatment, not the option that gives a preferred bill total.
- Total tax (%): enter the reviewed total rate for a taxable rule. The app splits a within-state rule into equal CGST and SGST components; a between-state rule uses IGST.
- Apply tax to freight and Apply tax to packing: choose which charge lines the reviewed rule covers.
- Add tax rule creates another combination. Remove tax rule removes that draft row.
- Do not repeat the same service, customer-registration and jurisdiction combination. Check every required combination before saving.
- Select Save tax policy draft when the rule list is ready.

Step 3 - Review and publish

- Check the supplier GSTIN, policy dates and rule count.
- Open Review every tax rule and confirm the service, registration, jurisdiction, treatment, rate and supporting references.
- Tick the review confirmation and select Publish tax policy.
- A published policy is fixed. Existing bookings retain their saved tax evidence.
- Use Revise as a new draft for changes before publication. For a later change, publish a properly dated new policy.
- If the result is uncertain, use Retry same request. If a period or rule conflicts, correct a new draft rather than trying to overwrite history.
- After the effective start, return to booking and calculate the price using the customer's actual billing and handover details.

Change business settings

Change one setting in its own section, without losing the context of the page.

Open the correct business or branch

- Open Settings & help and check the selected Franchise at the top.
- Booking setup contains Rate card and Tax policy. Their separate chapters explain publication.
- Business preferences contains grouped settings. Open the group that matches the change you want to make.
- Organisation defaults apply at business level. Franchise overrides are local branch choices. Only permitted roles can change them.
- Using business default means the branch inherits the organisation’s saved value. A local override replaces that preference for this branch.
- Not set up means there is no saved value. Needs review means the saved preference is not currently usable; it is not a successful activation.

Change a preference

- Select Configure beside the setting. Its editor opens in that same section.
- The active section stays open while you edit, so the fields and validation remain visible.
- Change the required fields. Reason for settings change should briefly explain the business reason.
- Read the setting’s explanation and tick the review confirmation. Select Save reviewed settings change.
- Saving a preference does not change old bookings, receipts or reports.
- Discard settings draft closes the unsaved edit after any required confirmation.
- If someone else saved a newer version, refresh and compare. Use latest version for this draft only after checking the current value, then confirm the change again.
- If the result is uncertain, use the same-request retry. Keep the page open until the result is resolved.

Identity and preferences

- Operator display name: the name shown in the workspace. It does not change the legal supplier name or receipt issuer.
- Language preference: a saved language preference. The current app does not promise a full translated interface just because this is saved.

Counter operations

- Staff operating hours: choose Time zone and working days. For each selected day, enter the opening and closing time.

- Closes at end of day (24:00): use this when that day closes at midnight. Otherwise enter the actual closing time.
- Time zone: choose the correct named zone, such as India - IST. Enter another IANA time zone only when you know the correct zone name.
- New booking service suggestion: preselects Standard, Express or Same city for new booking drafts. Staff can choose another service.
- Collection calendar: select collection days and add individual Holiday dates when needed. Remove holiday removes that exception.
- A saved collection calendar does not automatically set collection deadlines or return parcels.
- Closing cutoff intent: saves a local time and time zone as a preference. It does not itself close a cash drawer or settle money.

Money and approvals

- Receiving account reference: select a current active receiving account and one of its supported receiving methods.
- This preference selects an existing account; it does not receive or verify a payment.
- Financial approval policy reference: select an available enabled policy. Change approval rules in Financial approvals, not by typing an invented reference here.
- Agent fee policy reference: select current active agent terms. Manage the real terms in Agent settlements.
- Load more financial references if the needed option is on another page. If choices cannot load, refresh rather than entering a made-up ID.

Customer accounts and reports

- Credit policy, Overdue policy and Billing terms in generic settings cannot set actual customer account terms. Use Open customer accounts to manage the real account.
- New report scope suggestion: choose currently authorised branches. It is a starting selection for a new report, not extra access.
- The local active branch must be included when required. You may need Load more authorised franchises to see later options.
- Report schedule intent: saves report kind, branches, weekday, local time and time zone as a preference.
- Automatic report sending is not available through this preference. Saving it does not send a report or grant report access.

Clear, check history and recover

- Clear override removes this branch’s local preference so it can use the business default. If no default exists, the preference is left blank.
- Clear default removes the organisation’s preference. Read the review message and supply a reason.

- Saved version details and Where this setting comes from show the source and saved version when you need to investigate a change.
- Show settings history lists previous saved changes, reasons, actors and times. Load older settings versions brings more history.
- A read-only role can inspect permitted settings but cannot configure or publish them.
- Use the links to Financial approvals or Messaging administration for those separate tasks.

Change business settings

Change business settings

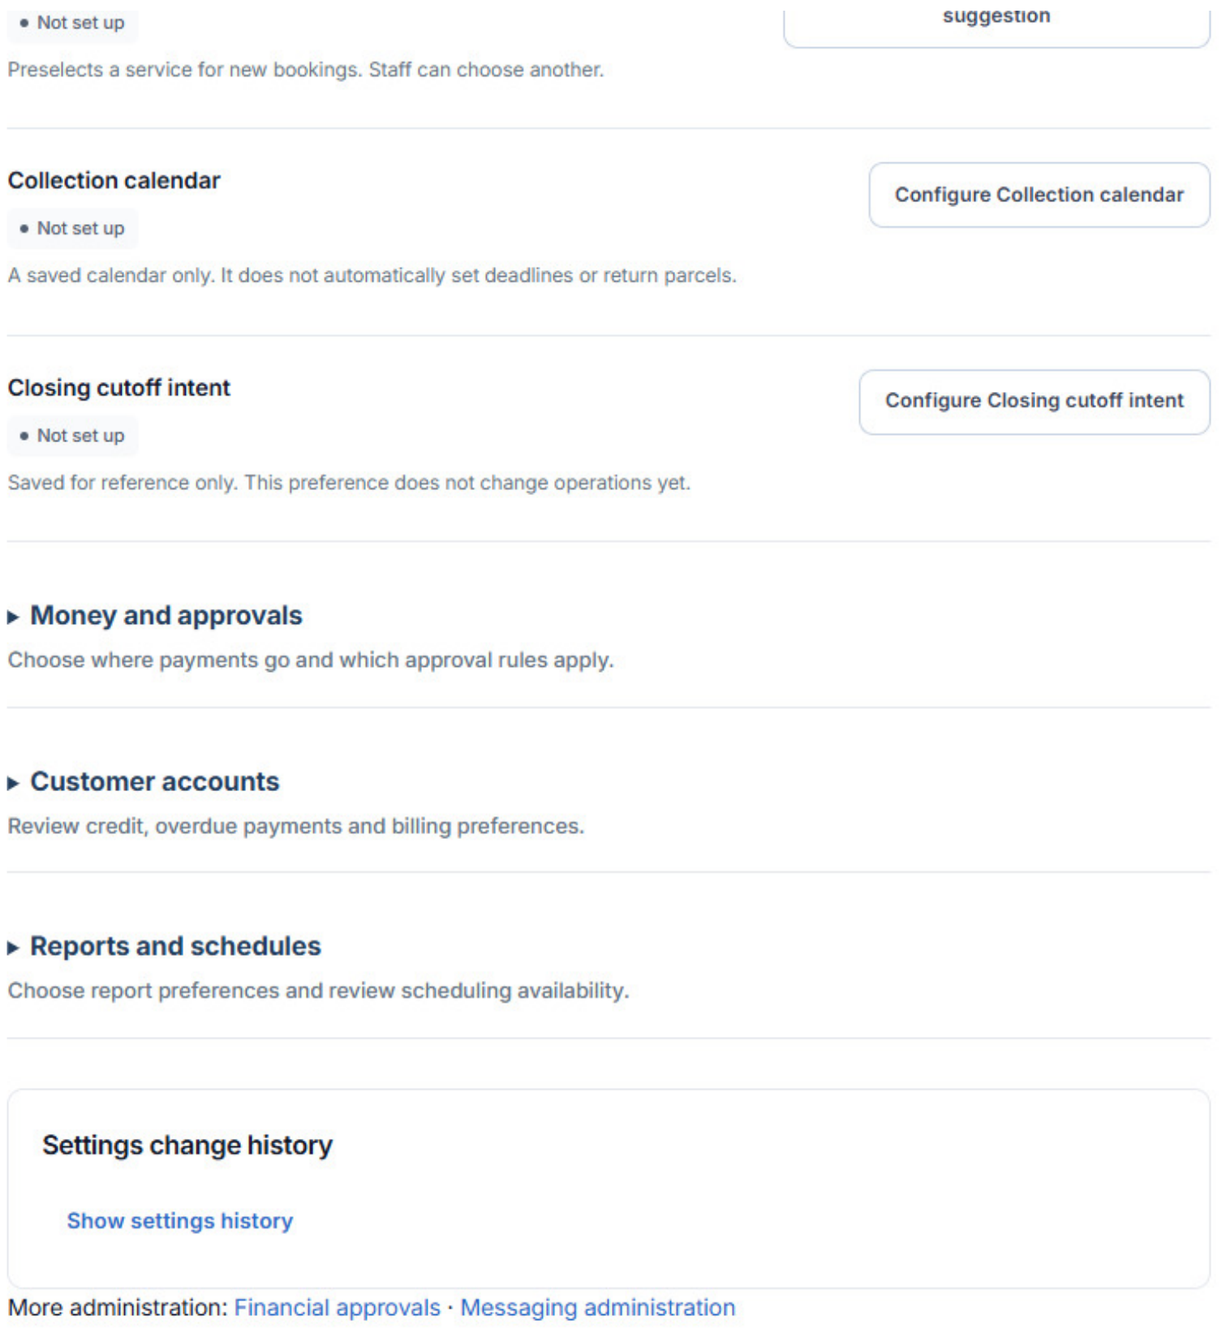
An operating-hours editor stays in its own settings section. Example screen using test records. | Screen section 4 of 4 (slight overlap keeps text readable).



Booking receipts and files

Find an issued booking receipt, print it again, and check the files linked to a saved booking.

Screen 1 - Find the receipt

- Open Bookings, then Receipts, or choose Open Receipts after saving a booking.
- Search by the parcel’s tracking number when you need a particular booking.
- Check the matching customer, booking and date before opening a receipt.
- Use Load more if the required record is not on the current page.
- Opening a receipt does not create another booking or record a payment.

Screen 2 - Load and print

- Select Load receipt in the Booking receipt panel. The app fetches the issued receipt.
- Check the receipt number, customer, issuer and total shown.
- Select Print receipt to open the browser’s print dialog. Choose the printer, or Save as PDF if your browser offers it.
- Reload receipt fetches the same saved evidence again. Printing another copy does not change the amount.
- If loading fails, select Retry receipt. If the print dialog fails, try Print receipt again.
- A booking receipt shows the booking bill. A collection acknowledgement records an actual money collection. Do not use one as proof of the other.
- Use Back to receipts to return to the list, when that button is shown.

Screen 3 - Files selected during booking

- Files selected in Parcel and Billing upload only after the booking saves.
- Ready to upload after booking means the file is still waiting locally. Uploading means bytes are being sent. Checking file safety means validation is still running.
- Saved securely is the successful file result. A rejected file is not available for use.
- Needs attention means use the attachment retry. The saved booking remains; do not book the parcel again.
- For a rejected file, add a supported replacement through Attachments on the saved booking.
- Do not close the page or change branch before selected files have finished unless you accept losing files that remain only on the device.

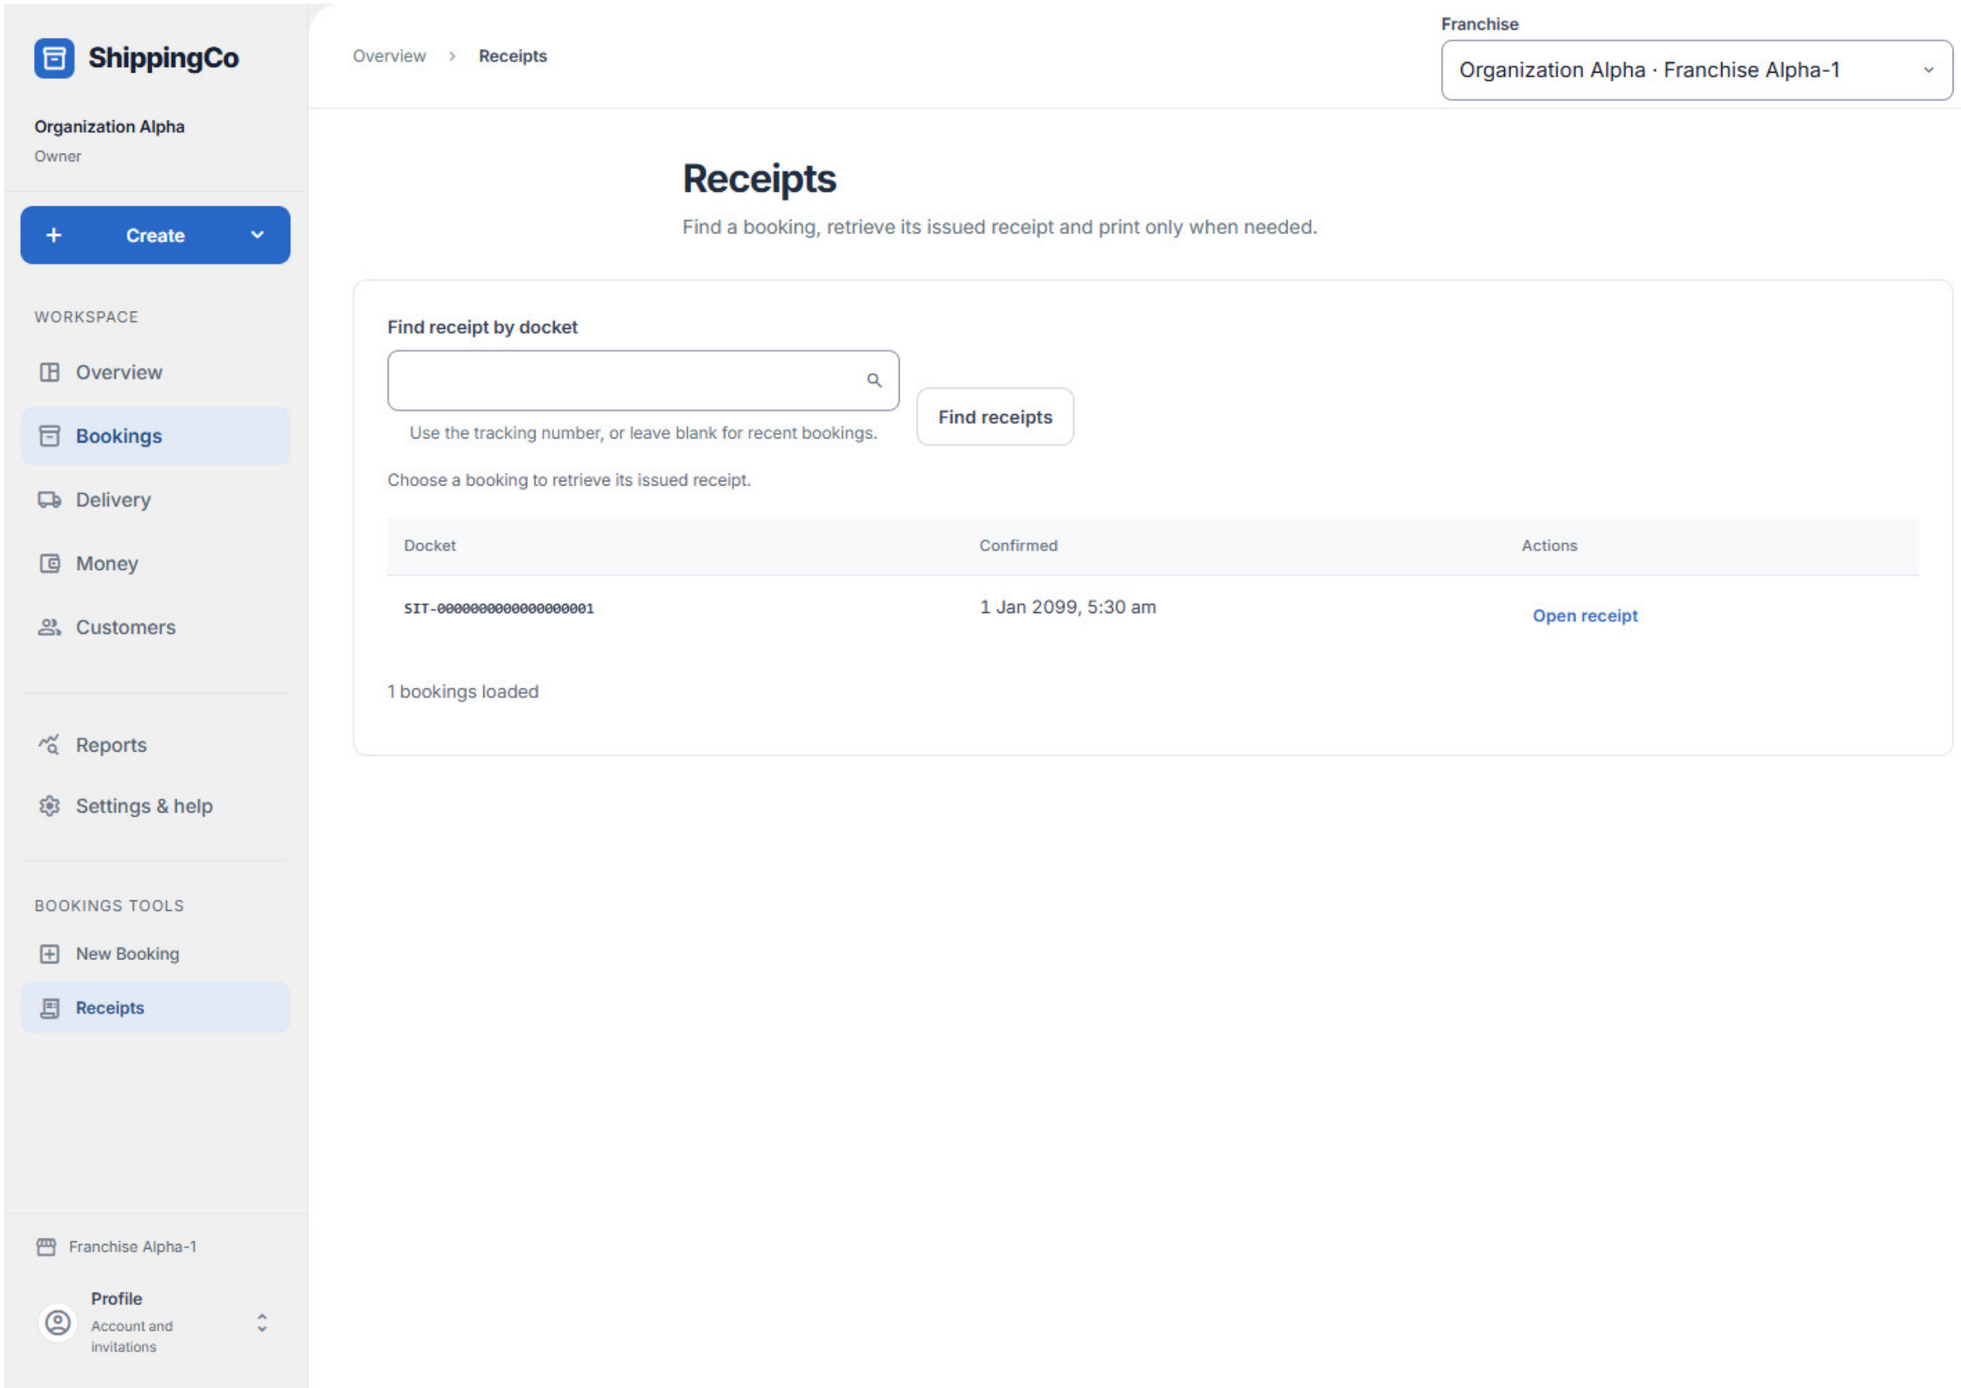
Screen 4 - Add or read files on a saved record

- Open the saved booking or parcel’s Attachments area when that action is available to your role.
- Choose the correct file and purpose offered by the form. Shipment evidence supports the booking; parcel proof is tied to a parcel when that option is used.

- Wait for upload and safety checks to finish before expecting the file to open.
- Use the download or open action only for a ready, clean file. A pending or rejected file cannot be treated as available evidence.
- Supported files are PDF, JPEG, PNG, MP3, WAV and MP4. Files must be nonempty and at most 8 MiB each.
- The booking limit is 10 attachments and 32 MiB in total. A PDF must pass content checks; a renamed or unsuitable file may be rejected.
- Read any delete or cancel confirmation carefully. Removing evidence is separate from cancelling a booking.
- A file upload is not a delivery confirmation, payment verification or external e-way validation. Complete the relevant business action separately.

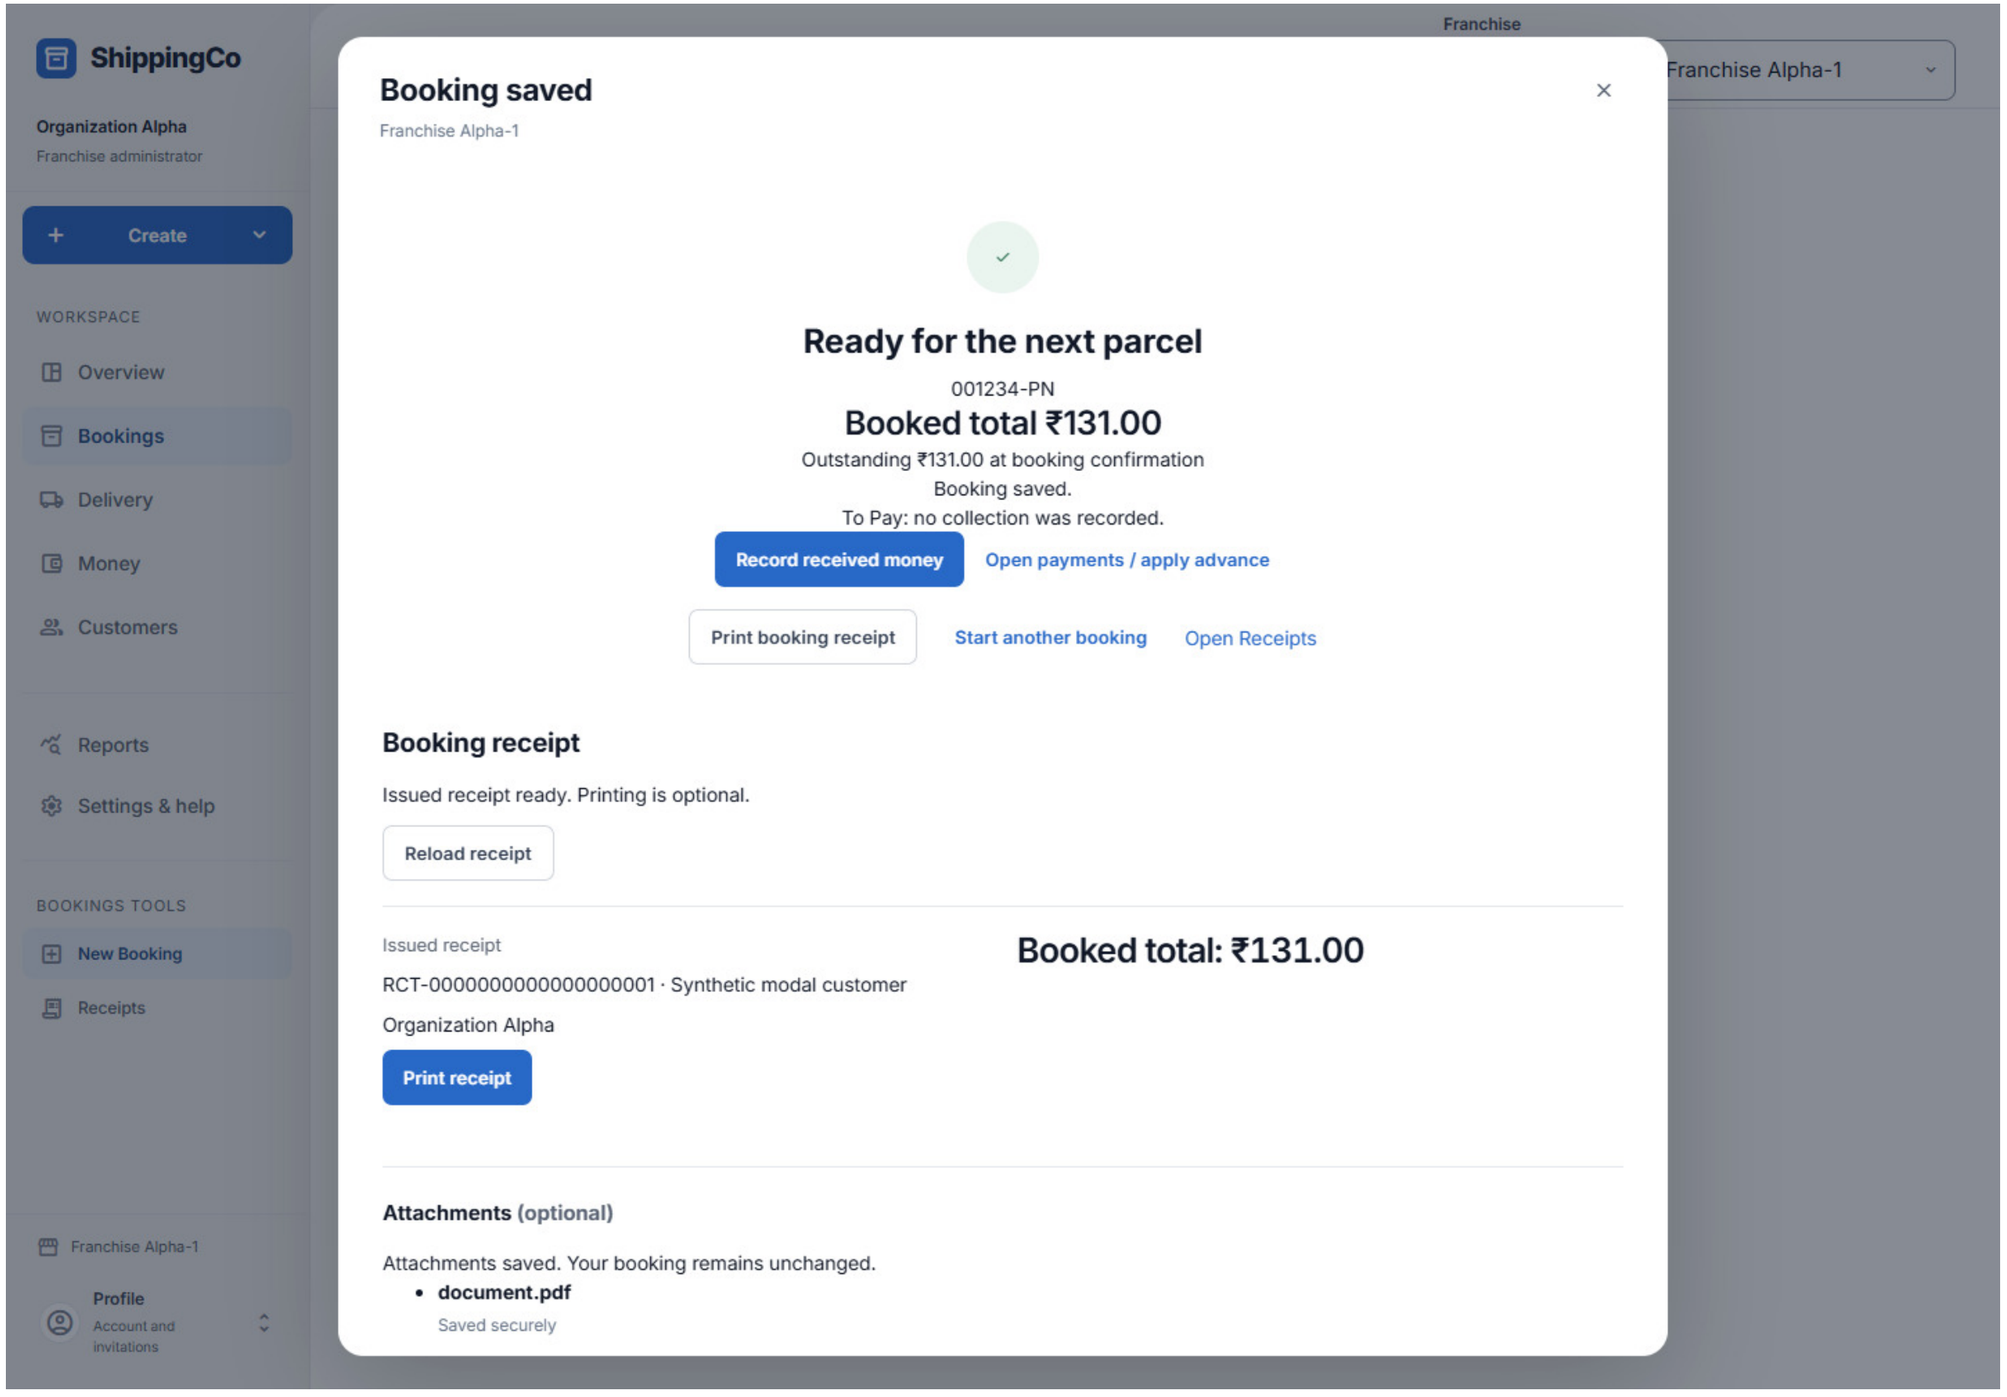
Booking receipts and files

Find the saved booking and open its receipt. Example screen using test records.



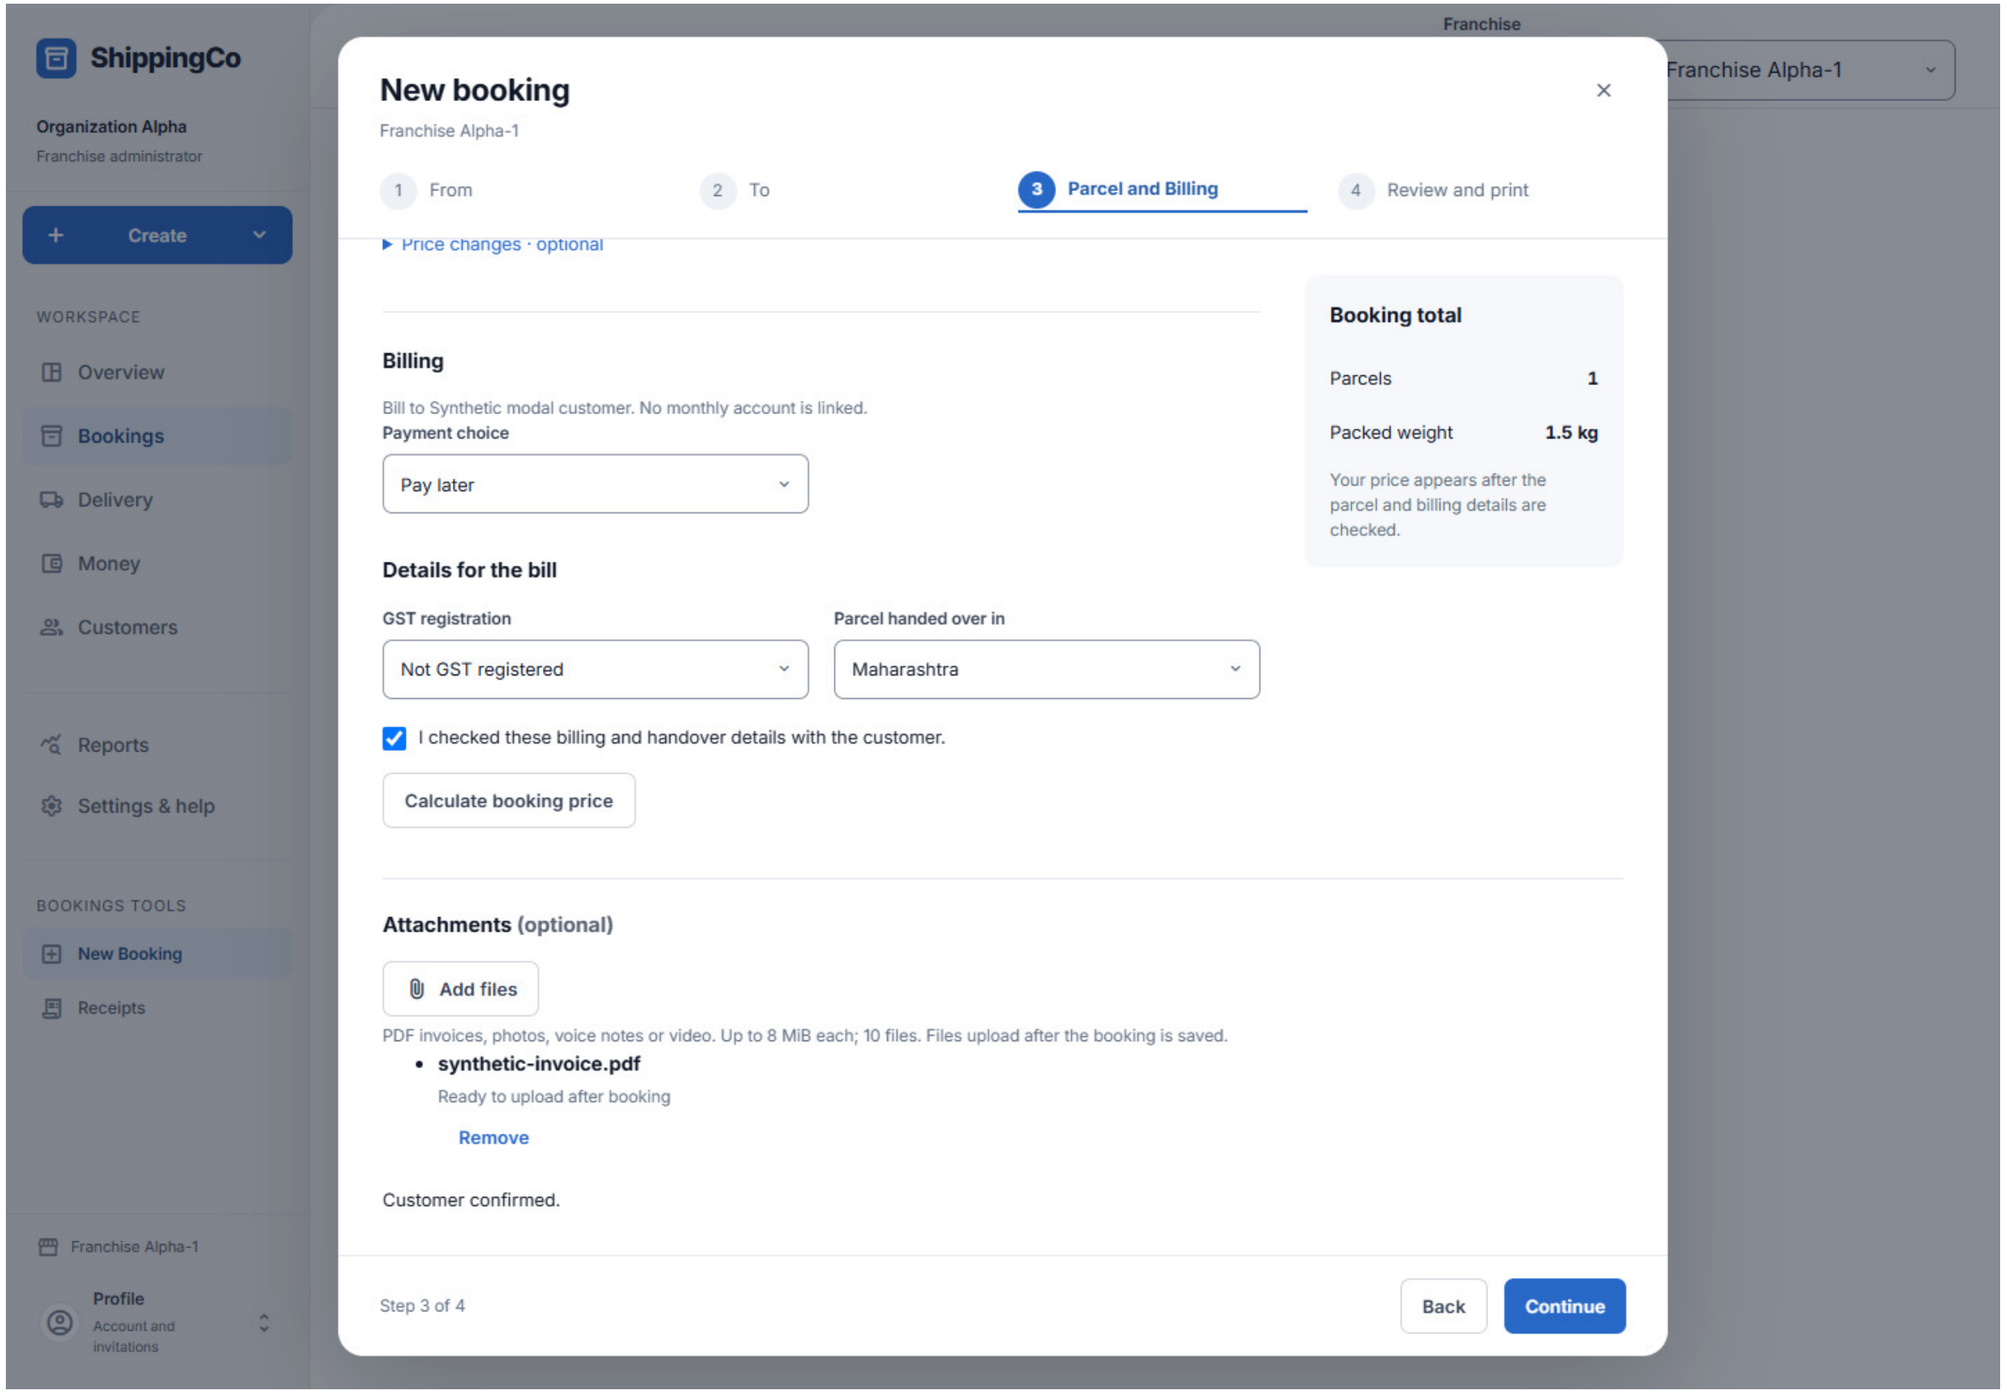
Booking receipts and files

A saved booking can load or print its receipt and record money separately. Example screen using test records.



Booking receipts and files

Files can be selected before saving, but upload and checks happen after booking confirmation. Example screen using test records.



Sales and GST

What this helps you do

- Review billed amounts, saved GST and subsequent financial changes.

Open this feature

- Reports > Choose a report > How much did we bill?.
- Check the active branch first. Available actions depend on your role and the selected record.

Create sales snapshot

- Choose Today, This week or inclusive From day and Through day in IST, up to 31 days.
- Filter by saved GST rate is optional. A fraction such as 5/100 filters existing saved rates; it does not change a tax rate.
- Expand Branches included only when needed and select permitted branches. Active branch stays included. Accept a configured report scope where offered for a new report.
- Create sales snapshot, review totals, GST groups and booking rows, then Load more sales as needed. Download matching sales CSV requires export access.

Inspect and act on evidence

- View saved evidence compares original and report amounts, corrections and statement references. Collections are net money applied to the bookings; unused advance remains separate.
- Reload current financial evidence before preparing a change. A saved report stays unchanged. Switch to the booking’s branch before managing another branch’s booking.
- Where permitted choose Action and real Approval evidence reference, then review reductions in rupees. Refund requires Actually refunded and Returned-to evidence reference. Confirm financial evidence records evidence; it does not send money. Complete independent review in Financial approvals where required.
- Open linked statements, or Issue account statement where offered for eligible unissued shipments without monthly terms. Monthly statements are managed in Customer accounts. Statements group charges, not a new sale.
- This is an application summary for accountant review, not an official GST return. Up to 5,000 bookings; saved reports expire after 24 hours.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- From day: First day of the report. Required.
- Through day: Last day of the report. Required. Up to 31 days per report.

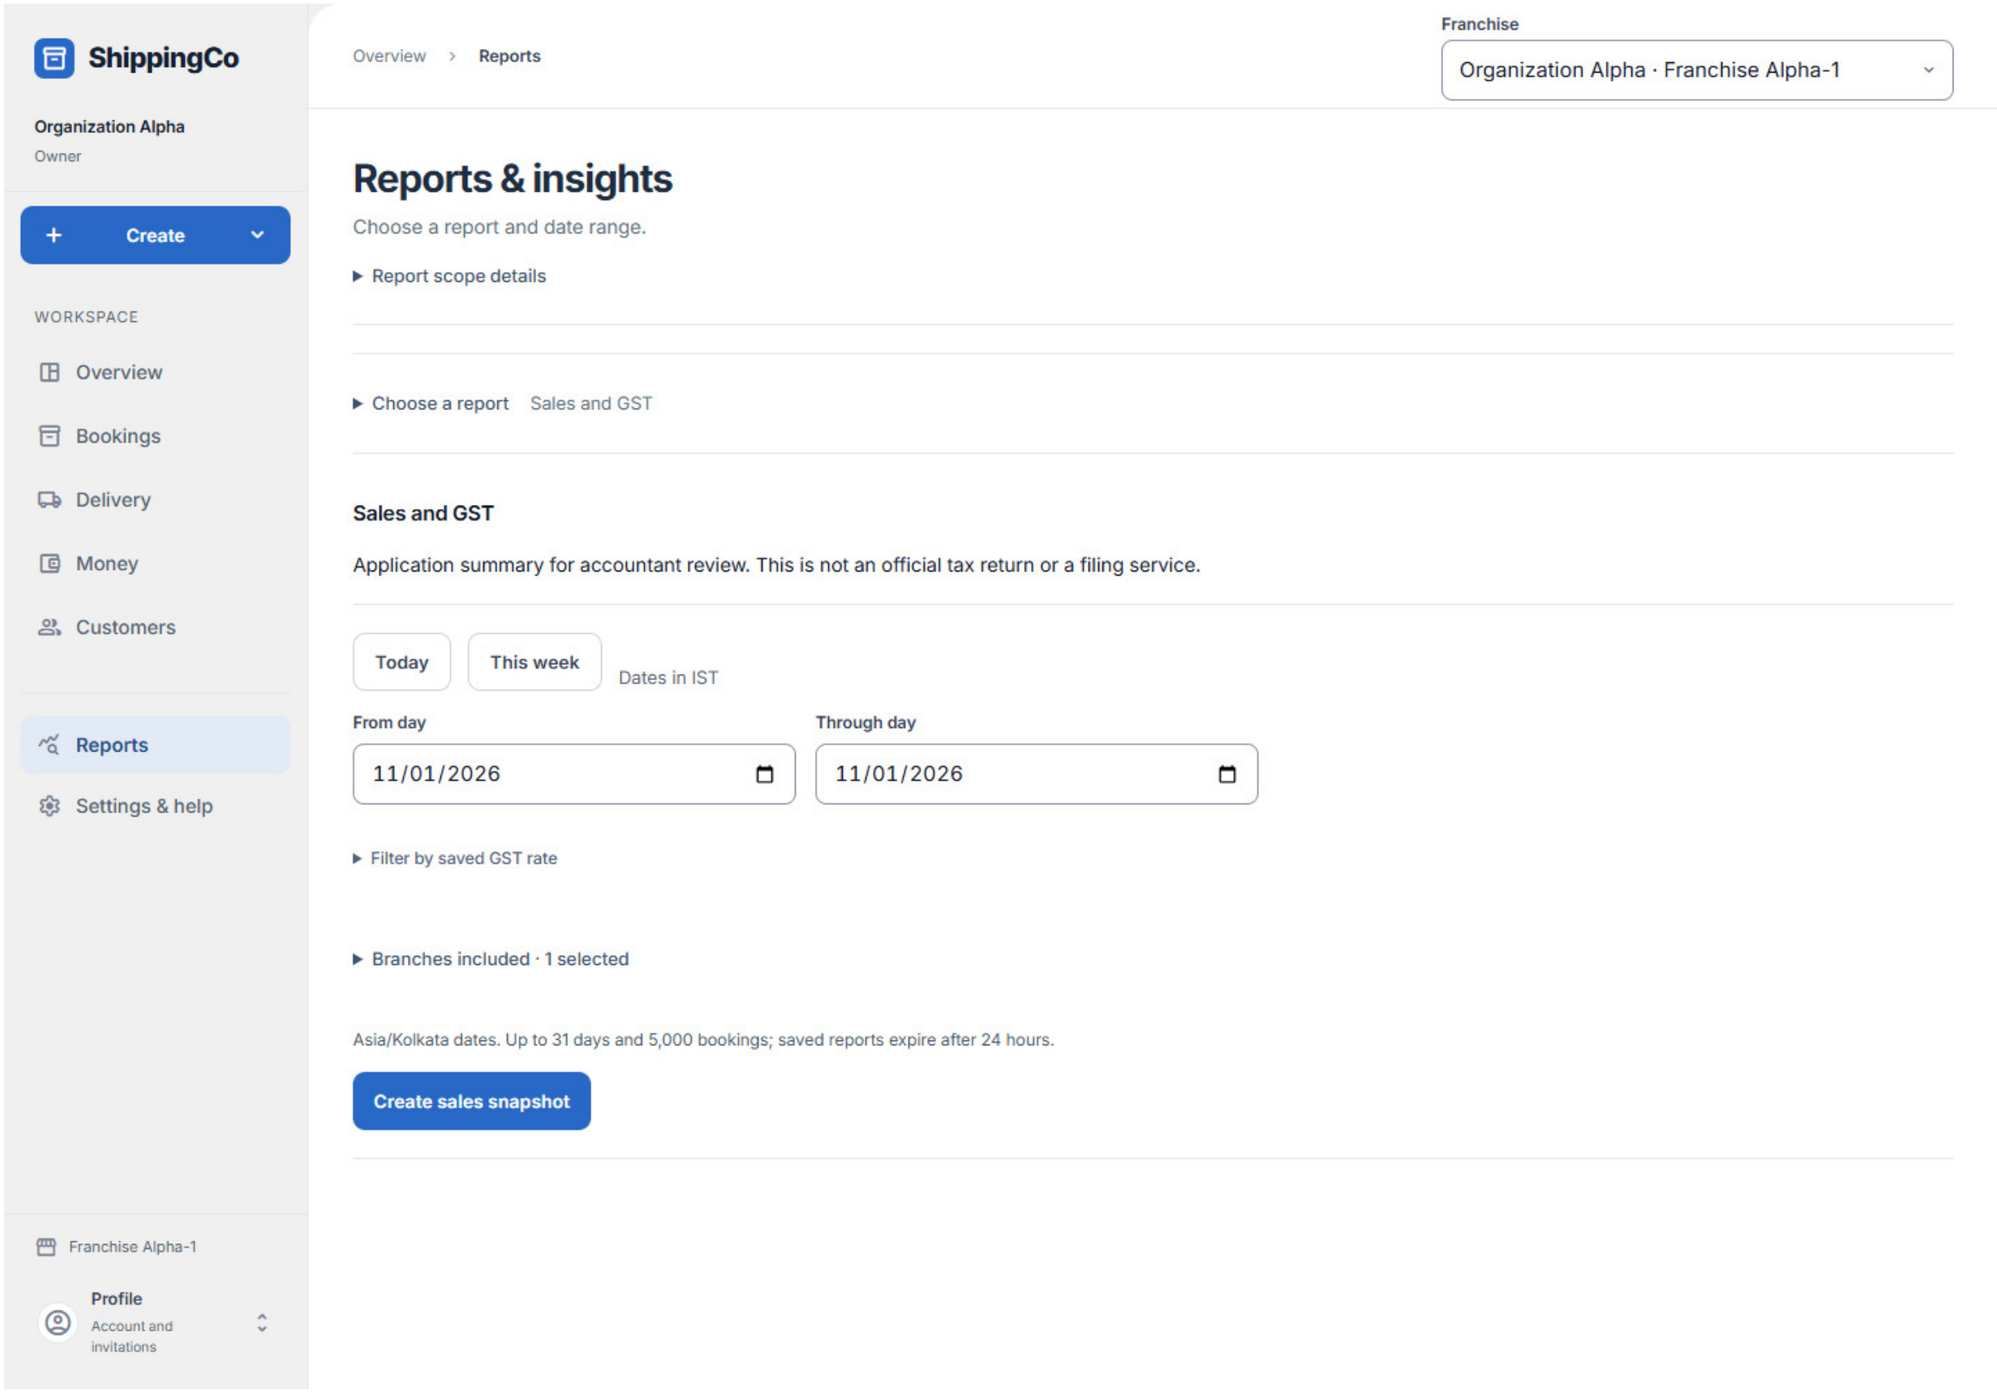
- Saved GST rate fraction (blank for all, e.g. 5/100): Filter by the fraction saved with bookings. For example, 5/100 means five percent. This filters existing records; it does not set a tax rate. Optional.
- Included franchises: Branches to include from those you can access. Active branch stays selected. Scope selection does not grant access.
- Action: Cancellation, Discount, Correction or Refund. Required choice when changing financial evidence.
- Approval evidence reference: The real approval record supporting the change. Required. It is not a free pass around the approval workflow.
- pre tax reduction (₹): The reviewed reduction in charges before tax. For Cancellation, Discount or Correction.
- taxable reduction (₹): The reviewed reduction in the amount on which tax was calculated. For Cancellation, Discount or Correction.
- cgst reduction (₹): The reviewed reduction in CGST. For Cancellation, Discount or Correction.
- sgst reduction (₹): The reviewed reduction in SGST. For Cancellation, Discount or Correction.
- igst reduction (₹): The reviewed reduction in IGST. For Cancellation, Discount or Correction.
- rounding reduction (₹): The reviewed change to the rounding amount. For Cancellation, Discount or Correction.
- Actually refunded (₹): Money already returned to the customer. For Refund. Recording it does not send money.
- Returned-to evidence reference: The actual record showing where the refund was returned. For Refund. Use real evidence.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Sales and GST

Sales and GST screen. Actual app screen using example data; names, dates and amounts are examples, not your business records.



Pickup requests

Agree a time to collect a customer’s parcel.

Before you start

A customer request must already be in the queue. This screen reviews requests; it has no new-request form.

Read the request, then save the decision

- Open Delivery, then Pickups. You can also choose Create, then Arrange a pickup. The list shows the request number, its state, the requested collection window, any agreed window, and whether manual review is needed. Use Refresh pickups for new requests and Load more pickups for older rows.
- Select Review pickup on the correct row. Check the collection address, verified WhatsApp contact, origin, destination, parcel weight and service. If contact is unavailable, review the original customer conversation before agreeing a time.
- Decision defaults to Accept. Enter Agreed start and Agreed end in your local time. Start must be in the future and within 30 days; end must be after start and no more than 24 hours later.
- Tick the capacity confirmation only after checking collection capacity and agreeing the window with the customer. If a manual-handling reason is shown, review it and tick the extra confirmation.
- Choose Decline when the request cannot be accepted. The agreed-time fields are not needed for this choice. Select Save decision once and check the updated state.
- The decision form is shown for submitted requests and permitted staff. An accepted request is not a booking and does not guarantee that a courier will arrive.
- After saving, check Customer message status separately. A failed, suppressed or uncertain message can leave the pickup decision saved. Ask an administrator to review message recovery instead of saving the same decision again.

Quick steps

- Open Pickup requests.
- Select Review pickup. Read the address, contact, parcel and requested time.
- Choose Accept or Decline. For Accept, agree the time with the customer and check your team can collect it.
- Complete the checks and select Save decision.

Fields on this screen

- Decision: Accept or Decline the request.
- Agreed start (your local time): Required to accept. Choose a future time within 30 days.
- Agreed end (your local time): Required to accept. Later than the start, and no more than 24 hours after it.
- I checked capacity and agreed this window with the customer.: Required to accept. Tick only after both checks are done.

- I reviewed the shipment requiring manual handling.: Shown and required when the request needs manual review.

What happens next

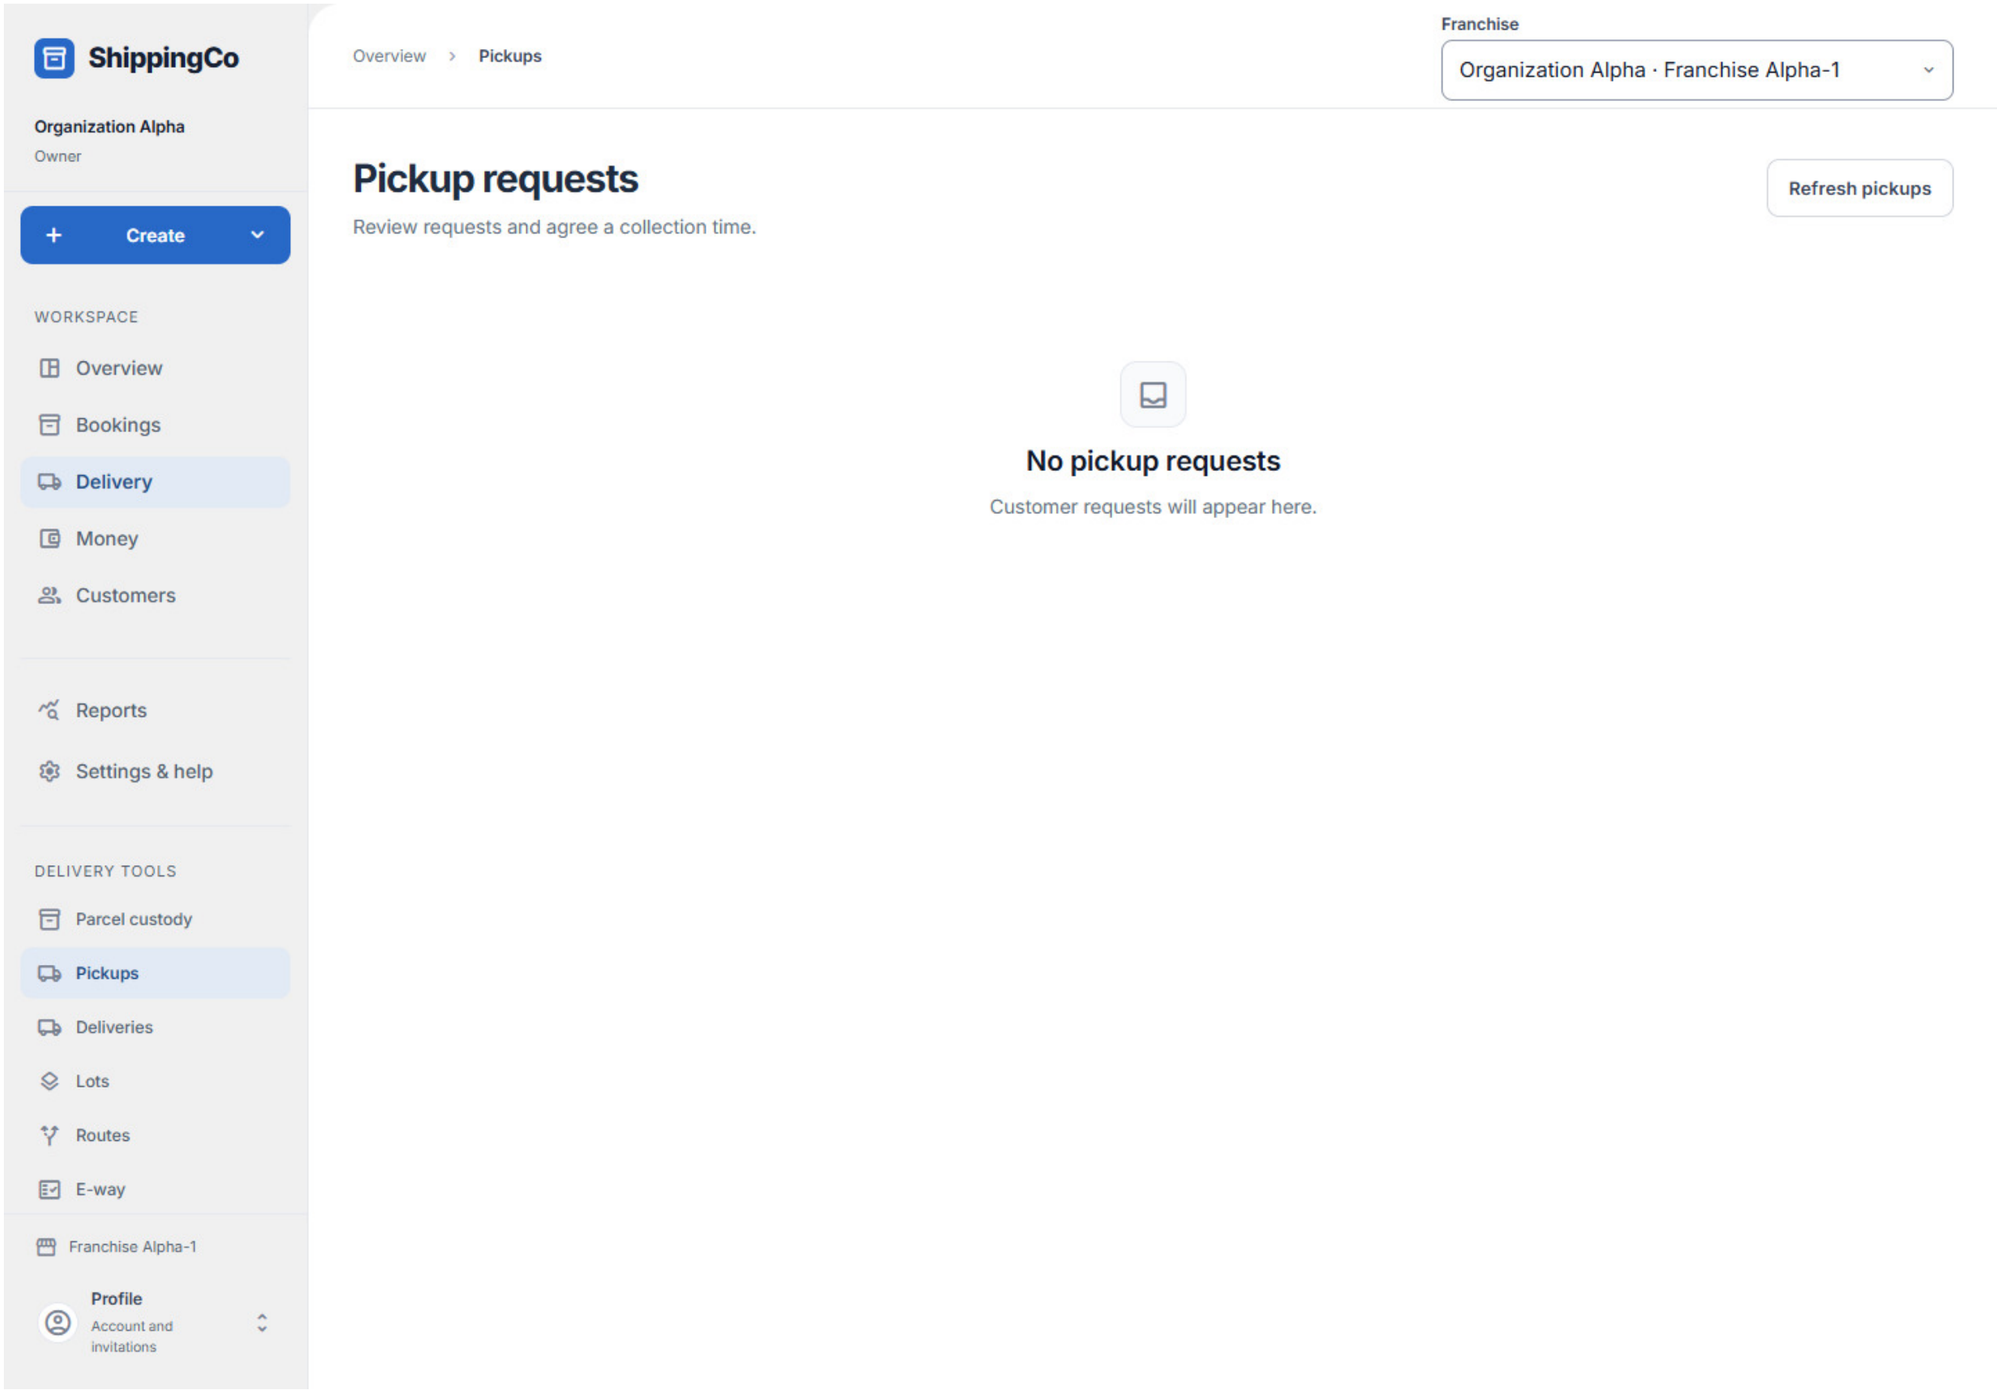
The decision and agreed time are saved. Accepting does not create a booking or guarantee that a courier will arrive.

If you get stuck

- No requests: customer requests have not appeared in this branch yet.
- No decision form: the request may already be handled, or your role cannot decide.
- A failed customer message does not undo the saved pickup decision. Ask an administrator to review it.

Pickup requests

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen.



Packages

Find parcels and record what has really happened to them.

Before you start

Create a booking first. Use real record references. A UUID is the long, 36-character ID of a saved record; it is not the tracking number.

Use the list and the selected parcel

- Open Bookings to reach the Packages list. Check the branch first. Enter a whole Tracking number and choose Search, or leave it blank to browse. Open Filters for status, routing destination and booking dates; Apply filters uses those choices.
- The selected parcel shows its tracking number, delivery status, weight, custody and booking reference. Read the Timeline to see the sequence of saved events. Open the relevant work area if you need the full booking or payment evidence.
- For Booked parcels, check in using the real location and evidence references. For Checked in parcels, dispatch using a finalized manifest and evidence. A transit action uses the route reference and evidence. Only use the next action offered for the current state.
- To start delivery, select an active eligible Assigned delivery agent and supply the Handover evidence reference. Assign and send challenge starts the recipient-proof process; it does not mark the parcel delivered.
- For an unsuccessful attempt, enter the active attempt reference and evidence, then choose the true failure reason. If Start final delivery attempt is offered, select the agent and handover evidence again. The screen supports at most two physical delivery attempts.
- Open Update several parcels for bulk check-in or dispatch. Choose only the eligible parcels shown in the loaded list, enter the shared supporting references and submit. Read each result; failed items remain selected for review.
- Lot membership shows the saved group name/code. Remove from lot changes group membership only. The To-Pay ledger shows gross charges, applied funds and outstanding money; use Money receipts for recording or applying payments.

Quick steps

- Open Packages. Search by the full tracking number, or leave it blank to browse.
- Use Filters if needed. Select Search or Apply filters.
- Select Open for a parcel. Check its sender, receiver, status, timeline and lot.
- Use the next action offered for your role. Enter its supporting references, then submit.
- For several parcels, open Update several parcels. Choose the action and references, select eligible parcels and review the result for each one.

Fields on this screen

- Tracking number: Optional search. Enter the whole tracking number.
- Parcel status: Optional filter for the stage of delivery.
- Destination city / routing key: Optional rate-card destination, such as MUMBAI. Not a PIN code.
- Booked from / Booked through (Asia/Kolkata): Optional first and last booking dates. End must not be before start.
- Evidence reference (UUID): Required for a parcel action. ID of the real supporting record.
- Location reference (UUID): Required when checking in a booked parcel.
- Finalized manifest ID (UUID): Required when dispatching a checked-in parcel. Use the final dispatch list.
- Route ID (UUID): Required when recording transit.
- Active attempt ID (UUID): Required when recording a failed delivery attempt.
- Failure reason: Choose the actual reason: customer unavailable, customer requests pickup, address issue, refusal, payment not collected or operational issue.
- Approval reference (UUID) / Return plan reference (UUID): Both required for a return-to-origin action.
- Bulk action: Check in booked parcels, or dispatch checked-in parcels. Only eligible loaded parcels can be selected.
- Assigned delivery agent: Choose an eligible active agent when starting delivery.
- Handover evidence reference (UUID): Required to assign delivery and send the recipient challenge.

What happens next

The saved action updates the parcel and its history. Failed bulk updates stay selected. Delivery completion still needs recipient proof.

If you get stuck

- No parcels: clear filters, check the branch, or create a booking.
- No next action: your role or the parcel’s current stage does not allow it.
- Do not invent a UUID to unblock a form. Ask the responsible team for the actual record.
- Cancellation of charges is a whole-booking request in Financial approvals. It does not stop movement or refund money by itself.

Selected package and its history

1 Jan 2099, 5:30 am · sequence 4

Out for delivery
1 Jan 2099, 5:30 am · sequence 5

Lot membership

This parcel is not in a group.

Booking cancellation

Request cancellation of the whole booking's remaining charges in Financial approvals. Individual packages cannot be cancelled here. Physical movement and returns remain separate guarded operations; cancellation does not stop a parcel or refund money automatically.

Review whole-booking cancellation

To-Pay ledger

Gross	Applied funds	Outstanding	Ledger state
₹134.00	**₹100.00**	**₹34.00**	**partially collected**

Record new money and apply existing advances through named receipt evidence. Legacy single-booking records retain their original amounts and unknown source details.

Open money receipts

Lots - parcel groups

Keep parcels for the same destination together.

Before you start

Use the destination key in your rate card. You need permission to manage lots.

Create a group and choose its parcels

- Open Delivery, then Lots. Active lots are for current work; Archived lots are retained for reference. Each row identifies the group by code and name, destination, number of active members and last update.
- In Create lot, enter a useful Lot name and the Destination key from your rate card. For example, Mumbai morning group is a name; the routing key must match the configured destination. A PIN code is not a routing key.
- Open the group. Select ungrouped packages lists eligible parcels for this destination. Select the correct tracking number, check the Selected line, then choose Add parcel. Selecting a row alone does not add it.
- Expand Filter eligible parcels when needed. Booked from and Booked through narrow booking dates in Indian time. Ready package status chooses Booked or Checked in. Use More candidate packages to see another page, or Clear candidate filters if nothing matches.
- Use a saved parcel reference is an optional alternative for staff who already have the actual parcel record ID. Normal selection fills this reference for you.
- Expand Edit group name or archive to enter New lot name and Save name. An authorized administrator can Archive lot after reviewing the confirmation. Review members before archiving.
- Move and Remove act on a listed member. For Move, choose the named Target parcel group. Each choice shows its code, name and parcel count. Choose a different active group for the same destination; use More groups if needed. Review the target code, name, destination and state before Confirm move. Use a saved group reference is an optional alternative. For Remove, check the success notice confirming whether the parcel is now ungrouped.

Quick steps

- Open Lots and choose Active lots.
- Enter Lot name and Destination key. Select Create lot.
- Open the lot. In Select ungrouped packages, choose a parcel. Select Add parcel.
- Use Move to send a member to another active lot. Review the target details before Confirm move.
- Use Remove to take a parcel out of the group. Use Save name to rename it.
- If allowed, Archive lot and confirm when the group is no longer needed.

Fields on this screen

- Lot state: Show active or archived groups.

- Lot name: Required. A clear name, up to 120 characters; for example Mumbai morning group.
- Destination key: Required. The rate-card key, up to 32 characters. Uppercase letters, digits and underscores; start with a letter.
- Lot selection booked from / Lot selection booked through: Optional dates for finding ungrouped parcels.
- Ready package status: Choose Booked or Checked in for the candidate list.
- New lot name: Enter a replacement name, then select Save name.
- Parcel ID to add (UUID): Choose a candidate to fill this, or use the exact parcel record ID.
- Target parcel group: Choose the named active group for the same destination. Target active lot ID (UUID) is an optional alternative under Use a saved group reference.

What happens next

The app saves group membership. Grouping or archiving does not record physical parcel movement.

If you get stuck

- No candidates: clear dates and status, check the destination, or check whether parcels already belong to a lot.
- Target archived: choose another active lot.
- Record changed: reload and review the latest group details before trying again.

Selected lot and optional name controls

Lots - parcel groups

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen.

Routes and dispatch lists

Plan a journey and keep its parcel list together.

Before you start

Have the origin, destination, departure time and parcel tracking numbers ready. Named lot choices are available for adding groups.

Build the dispatch list without typing record IDs

- Open Delivery, then Routes. Choose All states, Planning, Finalized or Archived to find a journey. Open a row to review it; use Create planning route for a new journey.
- Enter Origin and Destination, choose Road, Rail, Air or Sea, and enter Scheduled departure in Asia/Kolkata time. Carrier code is optional. Create route saves a planning journey, ready for a parcel list.
- In the selected route, Add to dispatch list offers A parcel group (lot) or One parcel. For a group, select the named Parcel group: the choice shows its code, name, destination and parcel count. More groups loads additional choices.
- For One parcel, enter its Tracking number and select Find parcel. Check the returned sender, recipient, status and weight. Choose Use this parcel, then Add to dispatch list. The lookup result is a selection, not yet an attachment.
- Repeat for the required sources. Review Current manifest and its parcel sources. Detach lot or Detach parcel removes the selected source while planning. Review the resulting list before Finalize manifest.
- Expand Edit journey details only when a planning journey needs changes. Save journey details updates the route metadata. Use a saved internal reference is the optional alternative to the named group or tracking-number lookup.
- After finalization, record Departure, Delay or Arrival using the real effective time and evidence reference. Departure needs current movement authority; a finalized list alone does not establish physical departure.
- For Departure, Base route-leg ETA is optional. For Delay, enter the absolute total delay in minutes: a total of 90 replaces the previous delay; it does not add another 90. Check Latest route event and ETA after saving.
- Previous dispatch list is an optional history panel. Enter a saved Historical manifest ID belonging to this route and select Load snapshot. Old lists are retained evidence and cannot be edited there.

Quick steps

- Open Routes. Complete Create planning route and select Create route.
- Open the route. Expand Edit journey details and use Save journey details if needed.
- Choose A parcel group (lot) and its named group, or One parcel and find it by tracking number. Select Add to dispatch list. Repeat as needed.
- Review Current manifest. Detach a source if it should not be on the list.
- Select Finalize manifest when the list is ready.

- Record departure, delay or arrival separately, using the real event time and evidence.

Fields on this screen

- Route state: Filter Planning, Finalized, Archived or All states.
- Origin / Destination: Required journey start and end. Each may be up to 120 characters.
- Mode: Road, rail, air or sea.
- Carrier code (optional): Your carrier’s code. Up to 64 uppercase letters, digits, hyphens or underscores.
- Scheduled departure (Asia/Kolkata): Required planned date and time in Indian time.
- Manifest source: Lot snapshot or Direct parcel. A manifest is the dispatch list.
- Lot ID / Parcel ID (UUID): Required ID for the source you attach.
- Event: Departure, delay or arrival. Available after finalising.
- Effective time (Asia/Kolkata): Required time the event happened.
- Evidence reference (UUID): Required ID of the supporting event record.
- Base route-leg ETA (Asia/Kolkata, optional): Expected arrival for this journey when recording departure. Cannot be before departure.
- Absolute total delay (minutes): For a delay event: the total delay, not extra minutes to add. Whole number from 0 to 43,200.
- Historical manifest ID (UUID): Use an older saved manifest ID, then Load snapshot to inspect it.

What happens next

The route retains its dispatch list and events. Finalising a list does not record departure. The app calculates any revised ETA from saved event data.

If you get stuck

- Missing parcels: load more where offered. A partial list is not the full manifest.
- No event form: the route and manifest must be finalized, and your role must allow it.
- Archive planning route keeps history; it does not cancel bookings or confirm movement.

Routes and dispatch lists

Parcel handovers and custody

Record who physically holds each parcel.

Before you start

Assignment and physical receipt are different. Check the actual parcels before confirming a handover.

Follow the physical handover in order

- Open Delivery, then Parcel custody. Current worklist identifies parcels assigned to you or recorded in your custody. Read the current holder before choosing an action.
- Prepare handover creates a list for a named receiving agent. Select up to 50 actual parcels. A different assignment needs its dispatcher instruction; a parcel already held by another agent needs its specific transfer approval.
- Open Handover manifests and choose View handover. The receiving agent checks all listed parcels and confirms receipt only when every listed parcel is physically present. Preparing the list alone does not change physical custody.
- For a transfer between holders, the authorized person first approves the specific parcel and destination. The giver then records release using that approval. The named receiving agent records receipt separately. For transfer to an agent, use the receiving manifest reference; leave it empty for office release.
- When receiving an office return, select the true condition: without discrepancy, damaged, tampered, label mismatch or missing. Missing does not falsely transfer custody to the office.
- The selected handover can show saved outcome counts and evidence time. Failed counts can overlap physical outcomes; genuine delivery proof is still required for delivered counts.
- Use Cancel this prepared handover only to stop that preparation being acknowledged, then review Confirm cancel handover. It is not a record of movement. An unused approval can be revoked; this does not undo a completed transfer.
- Expand Manage receiving agents for invitations and access changes if your role permits it. Finish any uncertain custody request using the recovery controls before changing branch or beginning another request.

Quick steps

- Open the custody worklist and check the parcel and current holder.
- For a handover, choose Prepare handover, choose Receiving agent and select up to 50 parcels. Supply approvals where asked.
- Submit custody action. The receiving agent opens View handover and checks every listed parcel.
- The receiving agent selects Confirm I received every listed parcel only after receiving them.
- For a transfer, obtain a specific approval. The giver opens Approved outgoing transfers and records release to the named destination.
- The new receiver confirms receipt separately. For an office return, record the actual condition.

Fields on this screen

- Action: Prepare handover, Authorize reassignment, Approve specific transfer, Receive office return, Confirm parcel release or Revoke transfer approval. Choices depend on your role.
- Receiving agent: Required for preparation, reassignment or transfer to an agent.
- Select up to 50 parcels: Choose only the parcels going to this receiver.
- Dispatcher instruction for [tracking number]: Required when the parcel is assigned to a different agent. Use the saved instruction ID.
- Transfer approval for [tracking number]: Required when another agent currently holds the parcel.
- Parcel: Select the current parcel for a single-parcel action.
- Transfer destination: Named agent or Office.
- Office receipt condition: Received without discrepancy, damaged, tampered, label mismatch, or missing. Missing leaves custody with the agent.
- Transfer approval reference: Required for release or revocation. Paste the saved approval UUID.
- Receiving manifest reference (leave empty for office): Required supporting handover ID for transfer to an agent. Leave empty when releasing to the office.

What happens next

The app keeps preparation, release and receipt as separate records. A delivery assignment alone does not prove that an agent received a parcel.

If you get stuck

- No parcel in the list: load more or check the branch and current assignment.
- An approval alone does not move custody. Complete the giver and receiver steps.
- Cancel this prepared handover stops acknowledgement of that preparation; it does not undo physical movement.
- Revoking an unused transfer approval does not reverse a completed handover.
- If the result is uncertain, use the on-screen recovery action before starting another request.

Delivery work

Complete delivery using the recipient’s proof.

Before you start

A dispatcher must start the delivery attempt from the parcel screen. The assigned delivery agent handles the delivery.

Complete the active attempt with the recipient

- Open Delivery, then Deliveries. Open the correct active assignment. Check the tracking number, physical attempt number, code expiry, Proof attempts left and Resends left.
- The assigned agent asks the recipient for the code they received, enters exactly six digits in 6-digit recipient code, and selects Verify and complete delivery. Staff cannot reveal the code from this screen.
- If proof is rejected, read the remaining-attempt count and recheck with the recipient. Do not guess codes. Completion is confirmed only after the saved result succeeds.
- Expand Customer did not receive the code? for recovery. Resend same code is available only after the displayed cooldown and while resends remain. It neither extends expiry nor resets proof attempts.
- If the challenge expired and the action is offered, Replace expired challenge requests a replacement. Recheck the current state before asking the recipient to verify.
- Expand Delivery needs an exception only for a genuine exception with the recipient present. Choose recipient channel unavailable, provider unavailable, or challenge locked reviewed. Supply the real Protected evidence ID and Request independent approval.
- An authorized independent reviewer checks the request and uses Approve exceptional proof where offered. The agent completes using Complete with approved exception only after approval is recorded. Requesting approval alone does not complete delivery.
- Close detail returns to the list. Refresh checks current assignments. If the assignment no longer appears, review the current branch and saved parcel state rather than creating another delivery attempt.

Quick steps

- Open Delivery work and select Open beside the assigned parcel.
- At delivery, enter the recipient’s six-digit code and select Verify and complete delivery.
- If needed, use Resend same code when the timer allows it. Use Replace expired challenge only when offered.
- If normal proof cannot be used, choose the true Exceptional reason and provide the protected evidence ID. Request independent approval.
- After approval, use Complete with approved exception. Record any collected payment separately against the correct bill.

Fields on this screen

- 6-digit recipient code: Required for normal completion. Use the code supplied by the recipient at delivery.
- Exceptional reason: Recipient channel unavailable, provider unavailable, or challenge locked reviewed. Choose the real reason.
- Protected evidence ID (UUID): Required for an exception request. Use the saved protected proof record.

What happens next

Successful proof completes the delivery. A request for an exception is not completion. A separate authorized person must approve it first.

If you get stuck

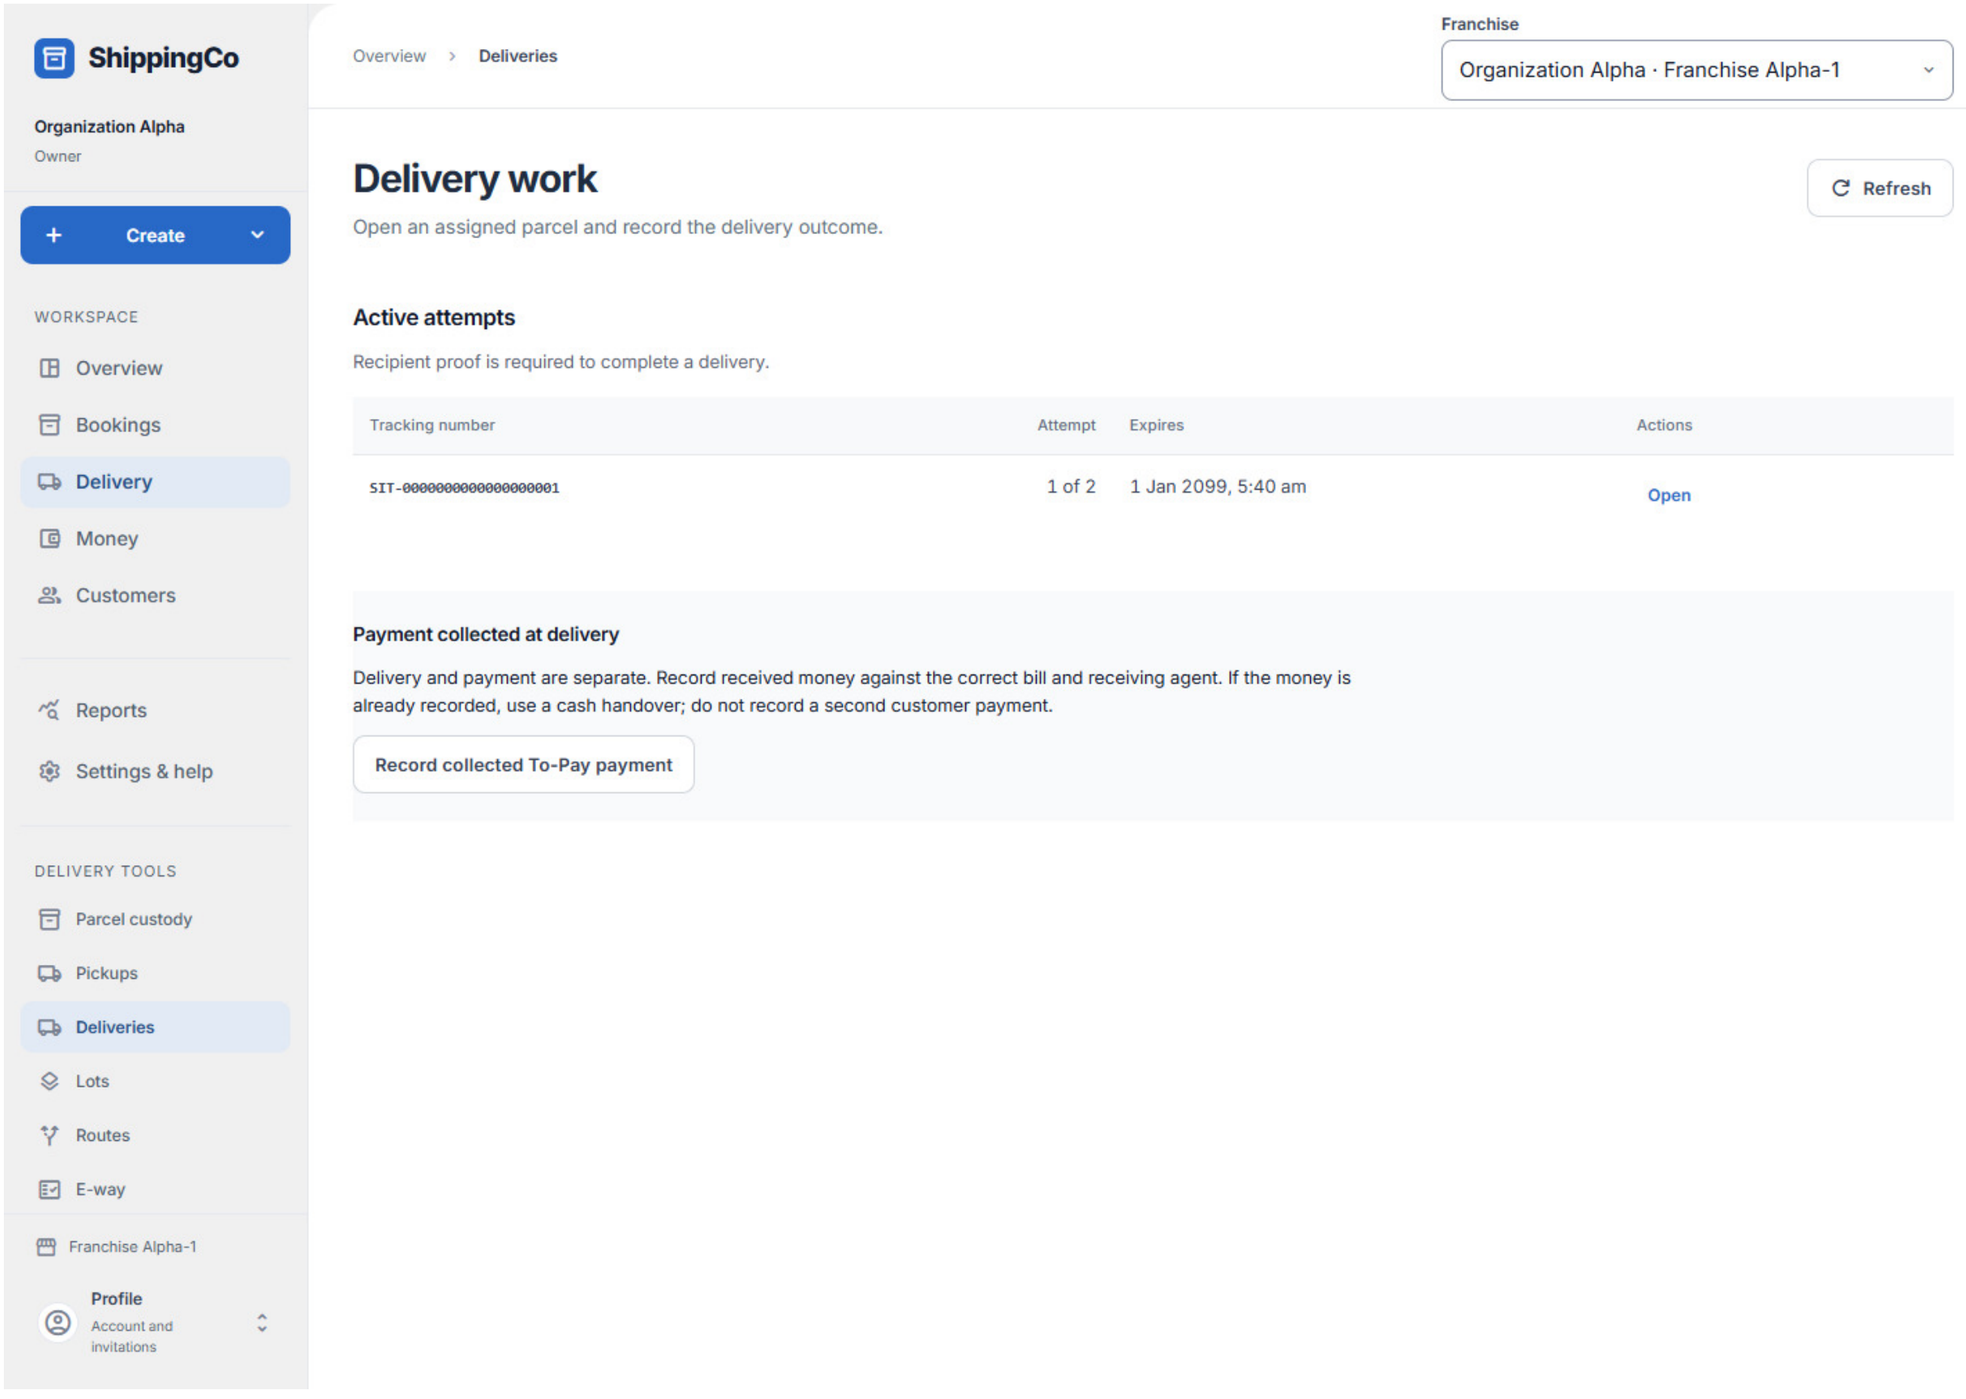
- No active deliveries: check your assignment and selected branch.
- Code rejected: read remaining attempts. Do not guess codes.
- Resending does not reset proof attempts or extend expiry.
- The current app shows at most two physical attempts. A dispatcher starts the second attempt from the parcel.
- Payment and delivery are separate. If a customer payment was already recorded, use a cash handover rather than record it again.

Assigned agent: recipient proof screen

- Check Send state before asking the recipient for a code. Failed · provider unavailable means the app has not confirmed a successful send. An active challenge by itself does not prove that a message reached the recipient.
- Use the offered resend or exception workflow only under its rules. Never make up a code or mark a parcel delivered simply because a provider is unavailable.
- Delivery proof and payment are separate. Open my cash handovers and daily statement takes the agent to money records. Do not record a second customer payment when handing over money already recorded.

Delivery work

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen.



Delivery work

Synthetic review assignment in an assigned-agent session. Send state is failed because the provider is unavailable. This image does not show successful code delivery or a completed parcel delivery. | Screen section 1 of 2 (slight overlap keeps text readable).

External e-way records

Keep the details of an existing external document with a booking.

Before you start

Have the source document and parcel tracking number ready. This screen records observations; it does not issue an official e-way bill.

Find the booking and open only the details you need

- Open Delivery, then E-way. In Find booking by tracking number, enter the parcel Tracking number and choose Find parcel. Check the sender, recipient, status and weight, then select Use this parcel. The app opens that parcel’s booking e-way record.
- You can also choose Open in Booking checks. Open by saved booking reference is an optional panel for an existing Booking ID; a tracking number belongs in the tracking search, not in the Booking ID field.
- For a new record, expand Declared goods value, E-way document, or Vehicle and distance. Leave unavailable sections empty. At least one section must contain a valid observation before Create record is available.
- Declared goods value needs both the rupee value and the declaration source reference. E-way document needs both External issuer and External reference when that section is used. Copy the source document rather than guessing missing dates.
- After saving, review Record, Official validity, ShippingCo estimate, Verification, Applicability and Value check separately. Reminder reasons identify items to review; no reminder is not official verification.
- Expand Correct saved details to change one target. Choose its reason, enter the supporting Reason reference and either supply replacement data or tick Clear selected field. Save correction retains previous revisions.
- Expand Calculate a travel estimate only when distance is saved and an approved policy exists. Enter the estimate start in Asia/Kolkata time and a reason reference, then Calculate with approved policy. The estimate does not change the official validity.
- Expand Previous records to review version, external reference, declared value, capture time and correction reason. Retry history reloads failed history; Load next page shows older revisions.

Quick steps

- Open E-way. Find the tracking number, review the match and select Use this parcel, or open a booking check.
- For a new record, fill at least one section. Copy the facts from the document. Select Create record.
- For a change, choose Correction target and Correction reason. Enter Reason reference. Fill only the selected section, or choose Clear selected field. Select Save correction.
- If needed, request a ShippingCo estimate using a saved distance and an approved policy.
- Review the saved record and revision history.

Fields on this screen

- Booking ID (UUID): Required to look up a booking directly. Use its record ID, not its tracking number.
- Declared value (₹): Optional section. Value stated on the source document; use rupees.
- Declaration source reference: Required if you enter declared value. The document reference stating that value.
- External issuer / External reference: Both required when entering the External document section. Use the issuer code and actual document number.
- Source reference (optional): Reference to the source evidence. Required if you enter official validity.
- Issued at (Asia/Kolkata, optional): Issue date and time from the document.
- Official valid until (Asia/Kolkata, optional): Enter only an official value. Also provide Source reference and Validity evidence reference. If issue time is given, expiry must be later.
- Validity evidence reference (optional): Required together with official validity. Identifies its supporting record.
- Vehicle number (optional): Actual vehicle number. Up to 32 letters, digits, spaces or hyphens.
- Distance km (optional): Whole kilometres, from 1 to 100,000.
- Correction target: Choose which one section or field to change.
- Correction reason: Metadata correction, source extension or declaration correction.
- Reason reference: Required for correction or estimate. Reference to the reason or supporting record.
- Clear selected field: Removes the current value of that field. Old revisions remain saved.
- Estimate starts at (Asia/Kolkata): Required date and time for the ShippingCo estimate.

What happens next

The app saves the observation and keeps old revisions. A ShippingCo estimate never changes official validity. “No reminder reasons” is not official verification.

If you get stuck

- Create disabled: enter at least one complete section. Value and declaration reference must be filled together.
- References must be short record codes, not sentences or web links. Use letters, digits and permitted separators such as hyphens.
- Estimate unavailable: saved distance and an approved policy are needed.
- The guide describes app behaviour, not the legal rules for whether your shipment needs an e-way bill.

External e-way records

Automation and messages

See whether shipment messages were queued, sent or delivered.

Before you start

Messages come from saved business events. This is a history and recovery screen, not a general message composer.

Read message evidence before recovery

- Open Settings & help, then Automation & Messages under Settings & help tools. Messages is the delivery-status history; Automation is the record of processing decisions. Changing History view resets its status and kind choices.
- Message status can distinguish Waiting, Sending, Accepted by provider, Delivered, Read, Suppressed, Failed and Uncertain. Automation outcomes describe processing, not a customer receipt. Choose All to widen the list.
- Notification kind selects the business update, such as booking confirmation, dispatch, route delay, delivery verification or delivery completion. Reference filter is optional: open it, enter an existing Correlation reference and select Apply correlation.
- Inspect opens Notification evidence. Read recorded attempts, their outcome/reason and time, and any route fanout decisions. Refresh detail checks for a newer status. Load older history extends the main list.
- Redrive original message and Send route reminder appear only for permitted recovery states and staff. If an uncertain send needs confirmation, investigate existing provider evidence first; another send may duplicate a message.
- This page does not send arbitrary emails or connect a new courier or messaging provider. It records configured message processing. Message bodies and delivery codes remain private.

Quick steps

- Open Automation & Messages. Choose Messages or Automation.
- Filter by status and notification kind.
- Select Inspect to read status, attempts and safe references.
- Refresh detail before a recovery action. An authorized administrator can use Redrive original message when offered.
- If a route reminder is eligible, select Send route reminder.

Fields on this screen

- History view: Messages shows delivery status. Automation shows decisions made by the app.
- Message status / Automation outcome: Choose a status, or All.
- Notification kind: Choose the type of update, or All.

- Correlation reference (UUID): Optional advanced filter linking related records. Enter a saved reference and select Apply correlation.

What happens next

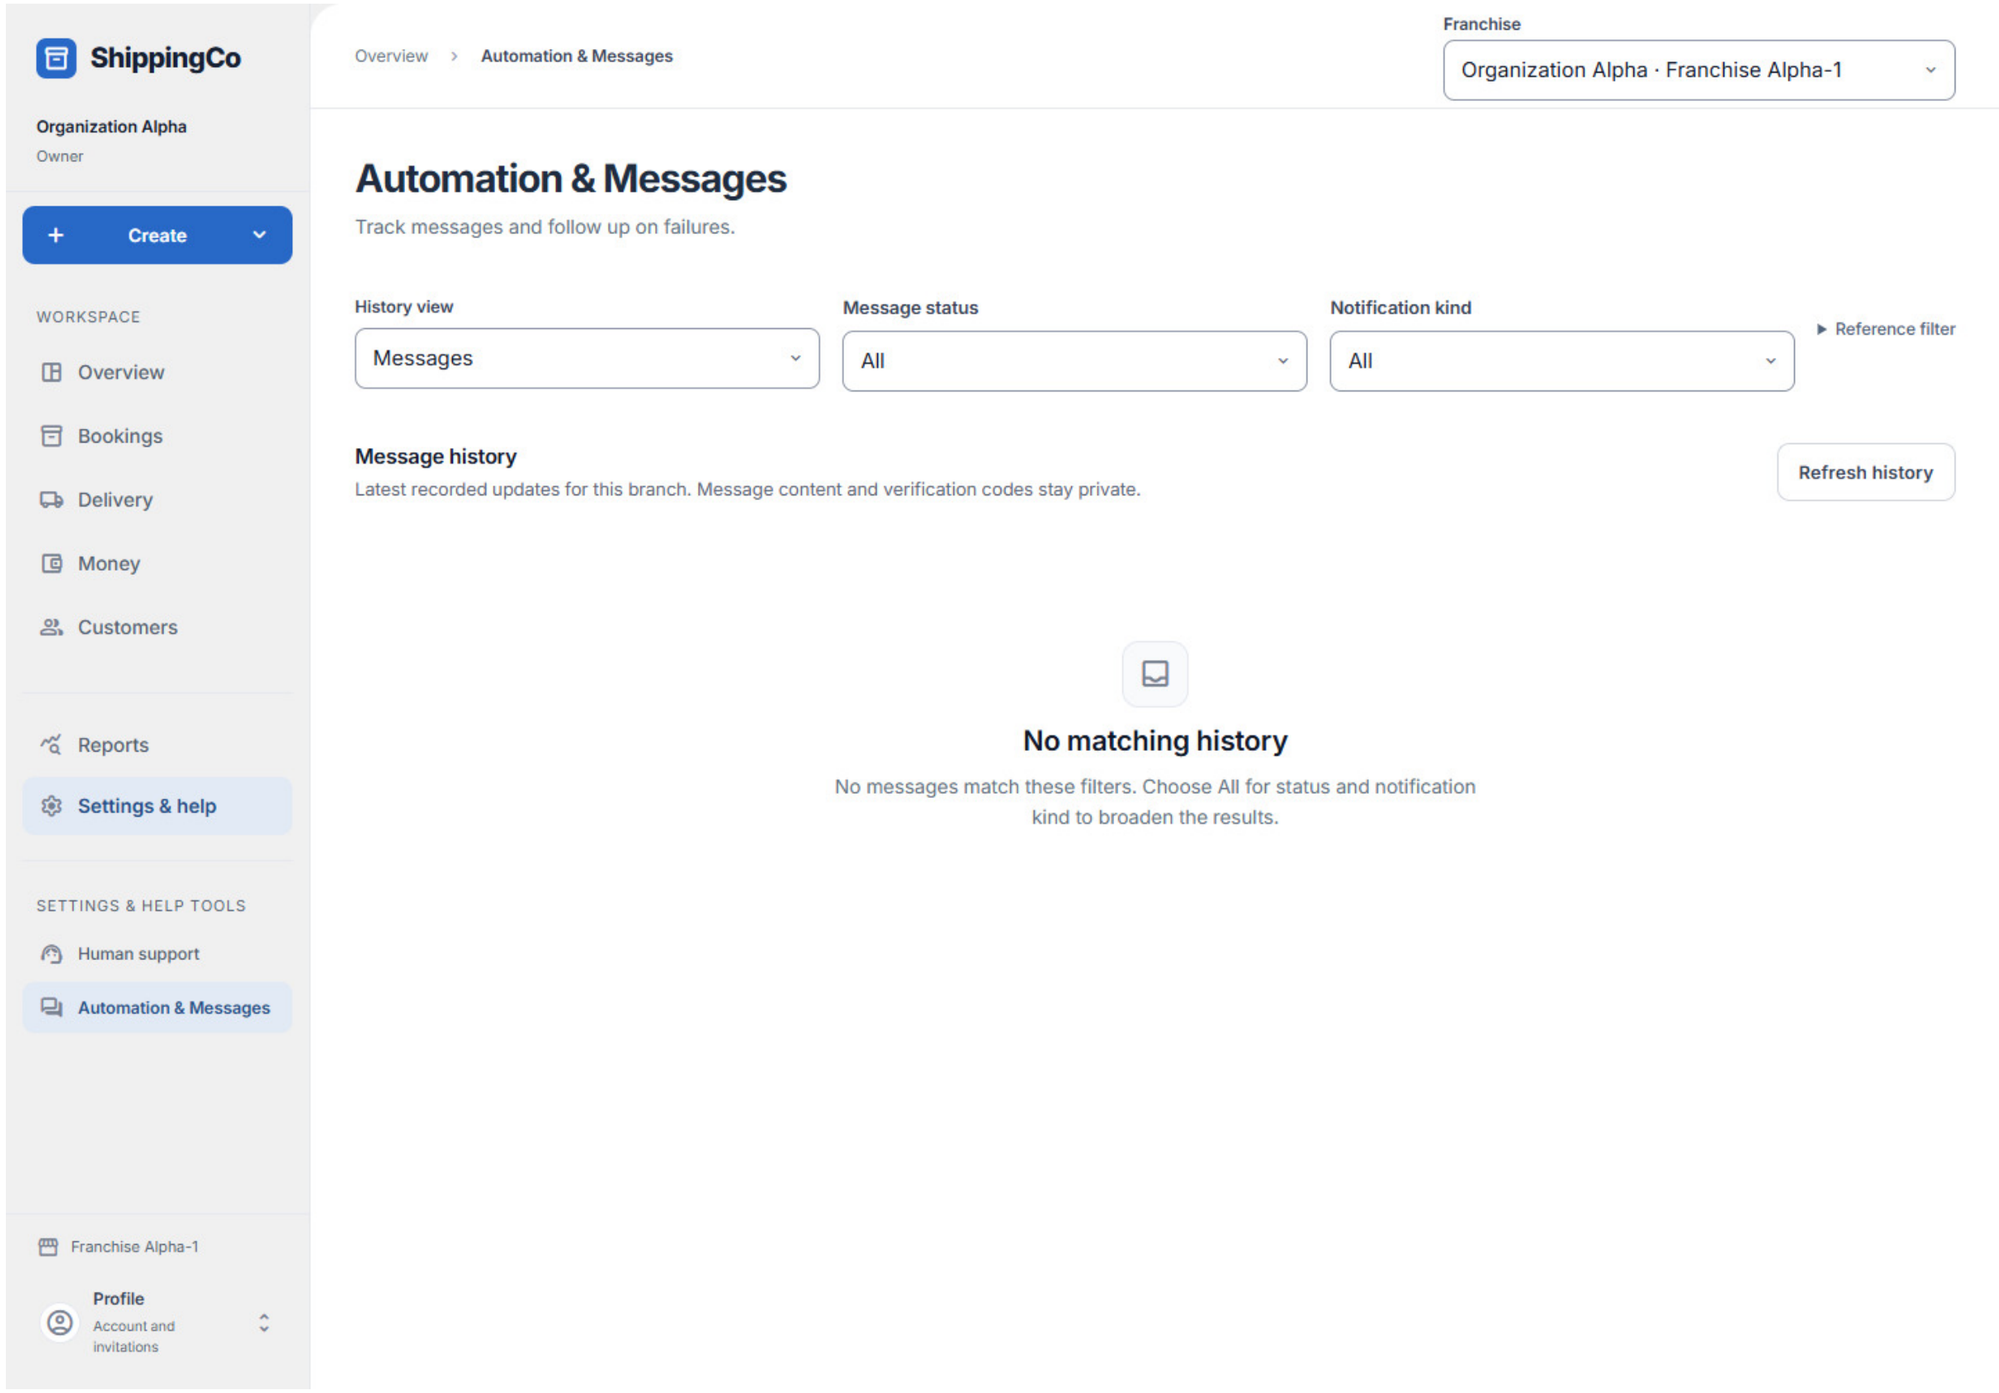
The app records message attempts and provider outcomes. “Accepted by provider” does not mean the customer received it. Message text and verification codes are not shown here.

If you get stuck

- No matching history: choose All for filters and clear the correlation reference.
- Uncertain outcome: investigate the provider evidence before retrying. A retry may send a duplicate.
- A failed message does not necessarily mean the booking or pickup action failed. Check that business record.
- Recovery buttons depend on your access and the saved message state.

Automation and messages

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen.



Messaging and assistant results

Review a saved weekly count of messages, assistant outcomes and support work.

Before you start

Choose a completed Monday-to-Monday week in UTC. This report is found in the reporting views.

Choose a closed week and read the saved counts

- Open Reports, expand Choose a report, and select Are customer messages working? / Messaging and assistant. Open How messaging results are counted for the definitions.
- Week beginning Monday (UTC) must be a Monday for a fully closed Monday-to-Monday week. Choose within the available 53 weeks; the week must have ended at least 15 minutes ago. Select Create effectiveness snapshot.
- After creation, check Saved week and captured time. Report section narrows the result to Messaging, Assistant or Queue, or shows All sections. Inspect on a measurement narrows to its category; Back to all categories removes that selection.
- Count is the measured total. Eligible describes the population used for that measure; Excluded records items not included. Suppressed means a small group is hidden for privacy, not zero. Unknown means there is insufficient evidence.
- Timing evidence may show mean receipt-to-record latency. Queue business age uses the staffing schedule saved at capture, including older open cases; it is not a promised response time. Missing staffing makes business age unknown.
- The report has aggregate evidence only, with no customer transcript, phone list or docket list. Accepted or Sent does not establish delivery. Tool success, thanks and staff resolution are different signals; calls saved and return on investment are not measured.
- Snapshots expire after 24 hours. Use Retry same effectiveness request if offered for an uncertain creation; Retry saved effectiveness reloads an existing report. If expired, create a new snapshot.

Quick steps

- Open Messaging and assistant effectiveness.
- Choose Week beginning Monday (UTC), then Create effectiveness snapshot.
- Choose Report section or select Inspect beside a measurement.
- Use Back to all categories to leave a category view. Create a new snapshot when the old one expires.

Fields on this screen

- Week beginning Monday (UTC): Required Monday date. Up to 53 weeks back. The week must have ended at least 15 minutes ago.
- Report section: All sections, messaging, assistant or queue.

What happens next

A fixed report is saved for 24 hours. It shows measured events, not a promise of business benefit. Small nonzero groups below five may be hidden for privacy.

If you get stuck

- Unavailable or expired: check access or create a new snapshot.
- Twenty active reports: reuse an existing report or wait for expiry.
- Accepted, sent and uncertain do not prove delivery.
- Unknown is not zero. Hidden counts are not zero either.
- Calls saved and return on investment are not measured.

Drill-through contains aggregate evidence only. No transcript, phone, docket or customer list is included.

Human support

Help customers and keep staff follow-up in one place.

Before you start

A customer request must already appear in the queue. Internal notes stay with staff.

Read, own and follow up the case

- Open Settings & help, then Human support under Settings & help tools. Review the state and owner in the queue, then choose Review case. Refresh cases checks for updates; Load more cases loads additional rows.
- Read the customer context before acting. Claim case takes ownership where permitted. Assign case shows Assign to staff; choose the responsible staff account, then Save action.
- For a case you own, select Reply to customer and enter the reply, or Add internal note for staff-only information. The required text is limited to 2,000 characters. Never put delivery verification codes or passwords in either field.
- Resolve case and Reopen case require a reason. Choose the actual reason: customer request, needs followup, answered, operational review or incorrect resolution. Save action records the change.
- Expand Staff history to check who acted, when, the reason and any saved message status. The panel may open automatically when message recovery needs attention. Reload case refreshes the selected case.
- A reply saved outside the permitted messaging window is blocked. A saved staff action is not proof that the customer received a message. Failed, uncertain or suppressed delivery needs administrator review.

Quick steps

- Open Human support and select Review case.
- Read the recent customer context. Claim an open case, or assign it to a staff member.
- For a case you own, choose Reply to customer or Add internal note. Write the text and select Save action.
- Choose Resolve case with the true reason when the work is done. Reopen case if follow-up is needed.
- Check Staff history for the saved action and any customer-message status.

Fields on this screen

- Action: Claim case, Assign case, Reply to customer, Add internal note, Resolve case or Reopen case. Available choices depend on ownership and state.
- Assign to staff: Choose the person who will handle the case.
- Customer message: Required for a reply. Up to 2,000 characters. Do not include passwords or delivery codes.
- Internal note: Required for a staff note. Up to 2,000 characters. Not sent to the customer.

- Reason: For resolving or reopening: customer request, needs followup, answered, operational review or incorrect resolution.

What happens next

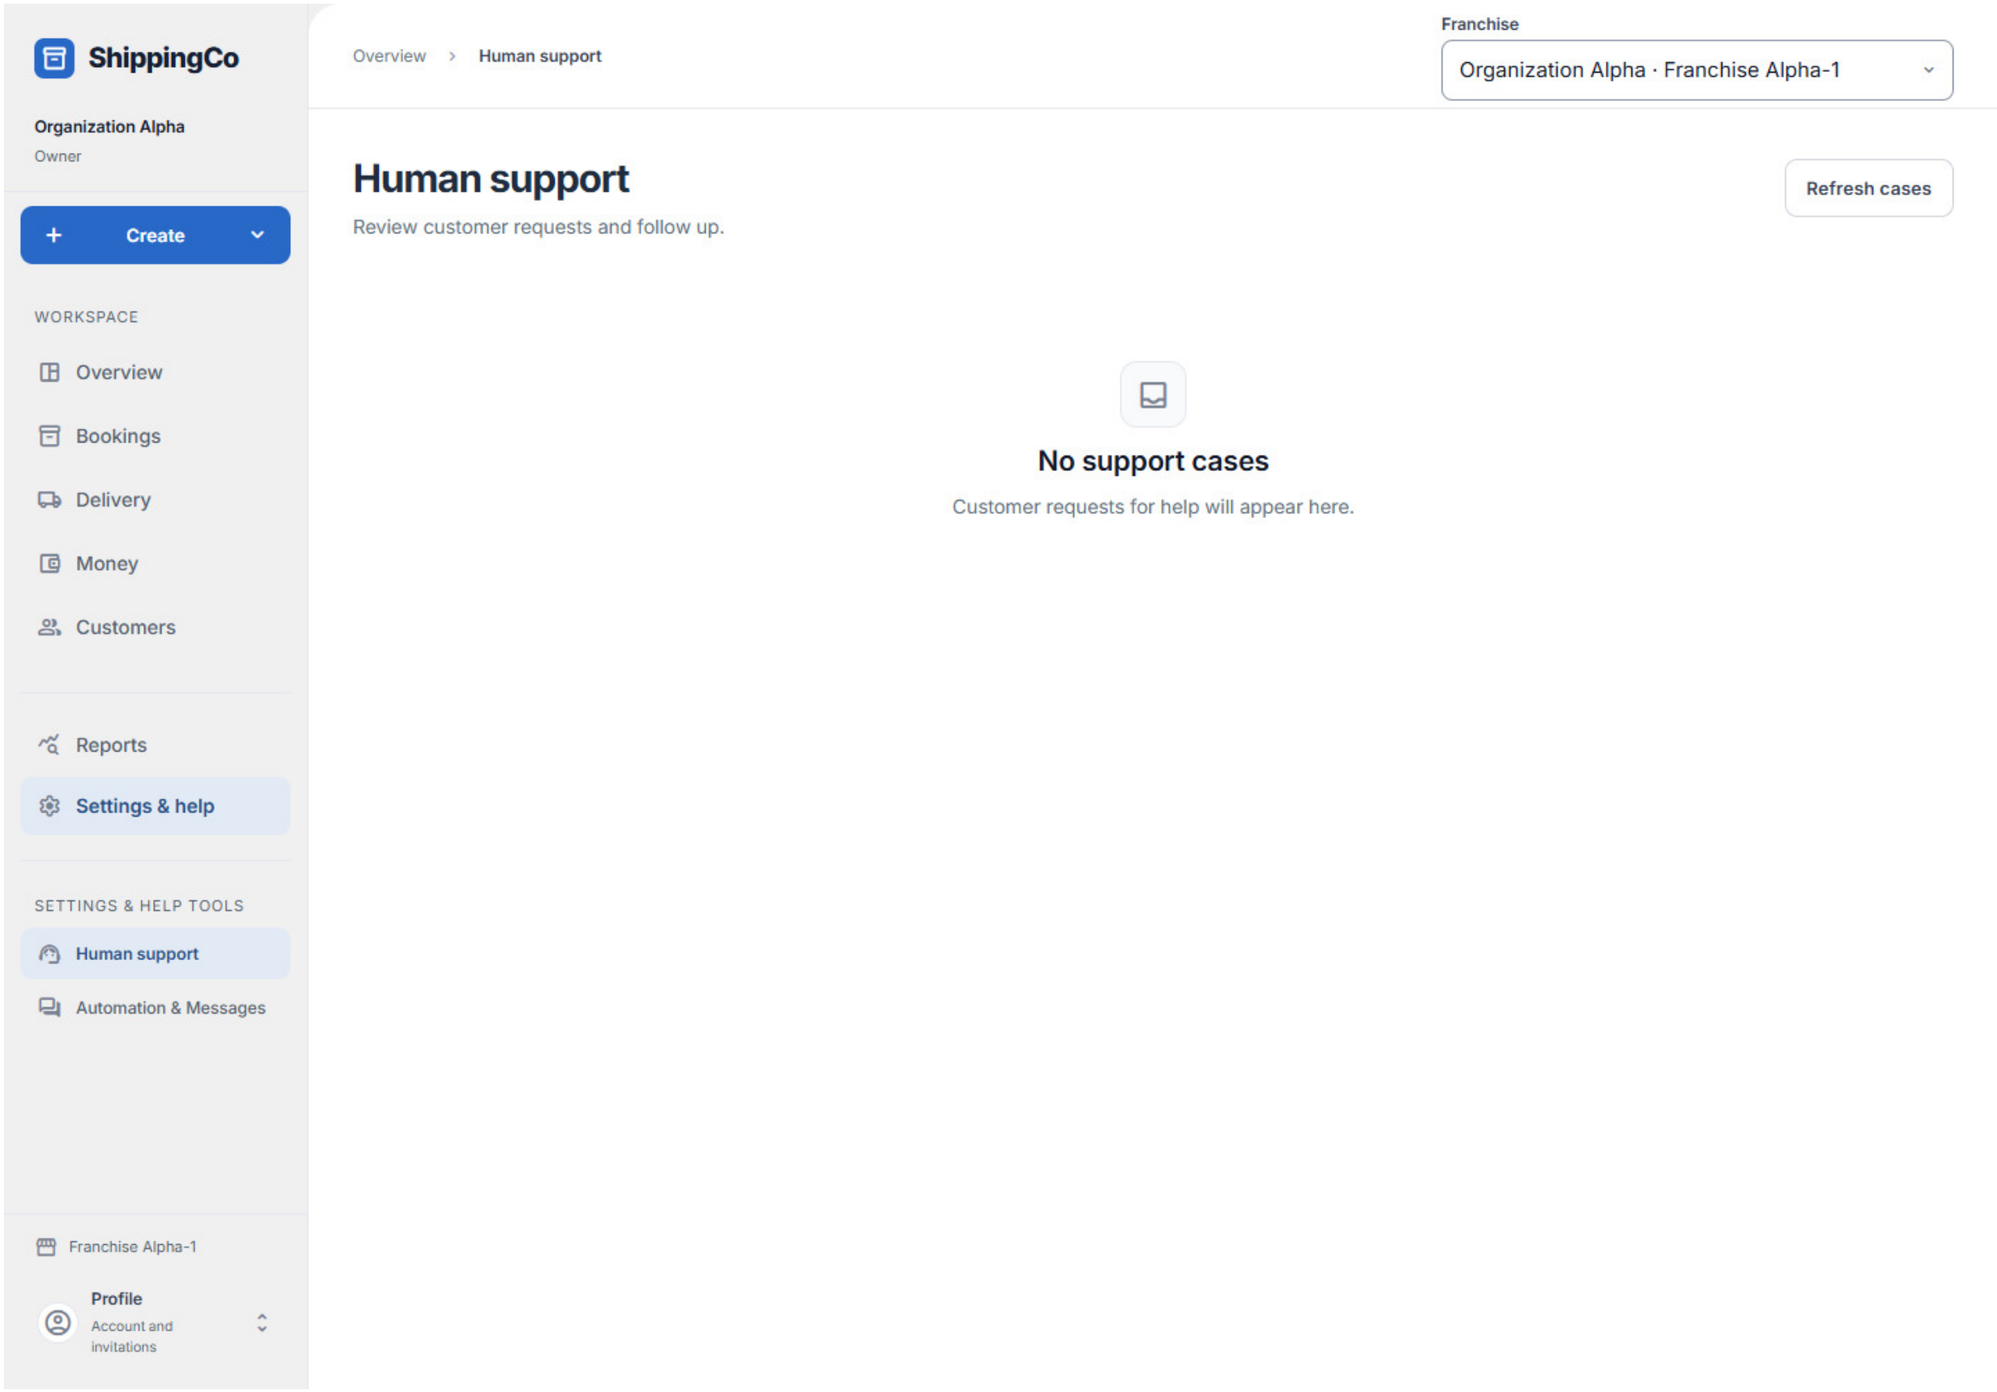
The action is saved in staff history. A saved reply may be blocked outside the messaging window, so check its send status.

If you get stuck

- No cases: customer help requests have not appeared in this branch yet.
- Cannot reply: claim or receive assignment to the case first, where allowed.
- Failed or uncertain send: ask the franchise administrator to review messaging recovery. Do not duplicate an uncertain send.
- Context is a brief record of outcomes, not a full conversation transcript.

Human support

Current app screen with example data. Names, references and amounts are examples, not customer records. Zoom in to read the screen.



Temporary agent access

Allow a verified person to work as a delivery agent in this branch.

Before you start

You need permission to manage access and the agent’s verified account ID. Do not use their phone number or a parcel reference in place of that ID.

Invite the exact verified account

- Open Delivery, then Parcel custody, and expand Manage receiving agents. Temporary agent access appears only for staff allowed to manage it.
- Ask the account administrator for the exact verified account reference of the named person. This field accepts the saved 36-character account ID. It does not search by name or email, and a phone number cannot replace the account reference.
- Enter Verified account reference and select Create agent invitation. Check the success notice. The one-time invitation code is shown only in this session; share it securely with that same named account and select Hide invitation code when finished.
- The named person must accept within seven days. Creating an invitation does not activate access and does not promise an automatic invitation email or WhatsApp message.
- Recorded memberships shows each account and whether its access is active or revoked. Invitations shows the account, state and expiry in IST. Refresh access records updates both lists and hides the session’s invitation code.
- To revoke, choose the specific active agent or pending invitation. Check the account shown in the confirmation. Confirm revoke access or Confirm revoke invitation applies that choice; Keep access unchanged cancels it.
- If the outcome is uncertain, use Check current access outcome before another request. A pending invitation may already exist even if its code was not received. Codes cannot be recovered here: revoke the pending invitation and create a replacement when needed.

Quick steps

- Open Temporary agent access in the custody area.
- Enter Verified account reference and select Create agent invitation.
- Share the one-time invitation code securely with that named person. They must accept within seven days.
- Check Recorded memberships to confirm that access is active.
- To remove access, select Revoke agent or Revoke invitation, review the account, and confirm.

Fields on this screen

- Verified account reference: Required. The 36-character UUID of the named verified account.

- One-time agent invitation code: Read-only result after creating an invitation. Share securely only with the named person. Hide it when done.

What happens next

An invitation alone does not grant working access. The person must accept it. Revocation keeps parcel and custody history. Restoring access requires a new invitation.

If you get stuck

- Uncertain result: select Check current access outcome before sending a new request.
- Invitation code lost: the code cannot be recovered here. Revoke the pending invitation and create a replacement if needed.
- No access after inviting: check whether the person accepted and whether the invitation expired.
- Do not leave or switch branch while the app is reconciling an access change.

Temporary agent access

Current app screen with synthetic review accounts. These are examples, not real customer records.

Temporary agent access

Invite a verified account to this branch. They must accept before working as a delivery agent. Revoking access keeps parcel history; restoring access needs a new invitation.

Verified account reference

Refresh access records

Owner summaries and alerts

Get a regular business report and see overdue customer payments.

Before you start

Open Reports, choose a report, then select Owner summaries and alerts. Only permitted staff can set up schedules. WhatsApp notifications need a verified WhatsApp login number and permission.

Set the schedule, then add optional alerts

- Open Reports, expand Choose a report, and choose What needs the owner’s attention? / Owner summaries and alerts. Refresh owner reports reloads schedules, overdue alerts and report history.
- Your WhatsApp permission applies to your own verified WhatsApp login number. Add and verify that number in your account before enabling notices. A schedule can produce in-app reports without WhatsApp notices.
- Create schedule requires a name, frequency, named timezone, local send time, at least one permitted branch and recipient. Weekly schedules also require Weekly send day. The active branch remains included; choosing branches never grants access.
- Enable this schedule controls regular runs. Also notify on WhatsApp requests a short report link, subject to recipient permission and eligibility. Private figures require sign-in and current access. There is no automatic email delivery promised here.
- Show overdue dashboard alerts reveals the overdue controls. Only then set Minimum overdue amount, Minimum days overdue and repeat frequency. These thresholds control debt alerts; they do not filter or price the ordinary summary report.
- Send explicitly configured overdue notifications is a separate choice within enabled alerts. Once until resolved avoids repeated unchanged notices; Every 24 hours or Every week allows the selected repeat period.
- Save owner schedule creates or updates the setup. In Schedules, Preview creates saved preview evidence; Edit loads the saved setup. New schedule leaves editing and starts a new setup.
- Overdue dashboard alerts shows qualifying debt. Acknowledge overdue alert records review only. It does not collect payment or cancel the balance.
- Report and delivery history shows recent runs and delivery status. Open saved owner report is available for ready reports. Saved source evidence switches between sales, overdue, expenses, custody, cash difference, unknown values and reconciliation. Previous sources / Next sources browse the saved rows.
- Create corrected versions for late evidence allows later corrected reports. Keep the capture time in mind: a saved report is not a live total. Unknown amounts, custody or due dates must not be read as zero.

Quick steps

- Read Your WhatsApp permission. Turn it on only if you want report notifications on that number.
- Fill Create schedule. Choose when it runs, which branches it includes and who receives it.

- Choose whether to enable the schedule and send WhatsApp notices. Set overdue alert limits if you need them. Select Save owner schedule.
- In Schedules, select Preview to make a saved preview, or Edit to change the setup.
- Read Overdue dashboard alerts. Select Acknowledge overdue alert after reviewing an open alert.
- Open a ready report from Report and delivery history. Choose Saved source evidence to inspect its records. Download saved owner evidence if your role allows it.

Fields on this screen

- Allow owner report notifications on WhatsApp: Your personal permission for these notices. Requires a verified WhatsApp login number and owner reporting to be enabled.
- Schedule name: Required short name, up to 80 characters; for example Morning business report.
- Summary frequency: Daily, Weekly or Monthly. Reports cover complete periods, not a live running total.
- Schedule timezone: Required. Use Asia/Kolkata for Indian time, or the correct named timezone for your business.
- Send after local time: Required time in the chosen timezone. This is when the report becomes due, not a guaranteed delivery time.
- Weekly send day: Shown for weekly reports. Choose Monday through Sunday. Weekly figures cover Monday to Sunday.
- Included franchises: Tick the branches to include. The current branch stays included. You can only use branches you are allowed to access.
- Permitted owner or finance recipients: Tick at least one permitted recipient. You means your own account; other entries identify staff accounts.
- Enable this schedule: Tick to make the schedule active. Leave off to keep its setup without regular runs.
- Also notify on WhatsApp: Request WhatsApp notices as well as in-app reports. Recipient permission and eligibility still apply. The message contains a short report link, not private financial figures.
- Create corrected versions for late evidence: Allow a later corrected report when relevant records arrive late. Original evidence is kept until its expiry.
- Show overdue dashboard alerts: Turn on alerts for customer debt that meets the limits below.
- Send explicitly configured overdue notifications: Also request notices for configured overdue alerts. This is separate from showing dashboard alerts.
- Minimum overdue amount (₹): Shown and required only when overdue dashboard alerts are enabled. Enter a positive rupee amount, with up to two decimal places. This is the balance needed to trigger an alert; it is not a payment request.
- Minimum days overdue: Shown and required only when overdue dashboard alerts are enabled. Enter a whole number from 1 to 3,650. The payment must be at least this many days late.
- Repeat unchanged overdue notifications: Choose Once until resolved, Every 24 hours or Every week.

- Saved source evidence: In a saved report, choose sales, overdue, expense, agent custody, cash difference, unknown custody, unknown due or reconciliation. Use Previous sources and Next sources to browse.

What happens next

The schedule is saved. Enabled schedules are checked by the worker every five minutes. Monthly reports become due on the first day of the next month. Saved reports expire after 24 hours; recent status history remains visible for 90 days.

If you get stuck

- No setup form: your account may have read-only access.
- Owner reporting disabled: the server has disabled this feature. Ask your administrator.
- No reports yet: enable a schedule and wait for a complete period, or use Preview.
- Saved report unavailable: it may have expired, or your access may have changed.
- Sent on WhatsApp means the provider accepted it; it does not prove delivery. For uncertain delivery, an administrator must check provider records. Do not resend blindly.
- Retry confirmed failed delivery is offered only for eligible failed notices.
- Acknowledging an overdue alert does not record a customer payment or remove the debt.
- Unknown amounts or due dates are not zero. Agent-held money includes only known recorded sources. Cash differences are not transfers or approvals.
- If offered, Retry the same owner request confirms the original request. Do this before making a new request.

Customer accounts

What this helps you do

- Set monthly billing terms, authorised shipping customers and agreed prices for a regular customer.

Open this feature

- Money > Customer accounts.
- Check the active branch first. Available actions depend on your role and the selected record.

Step 1 - customer and billing contact

- Select New account, or open a saved account and choose Revise terms, links or hold.
- Enter Account name. Search using at least three characters of the customer name and select the correct result. The first chosen customer is responsible for the bill. Add authorised shipping customers from the results; remove any incorrect shipping link.
- For a new customer, use Add as a customer in the search. The searched name becomes the new customer name. Enter New customer phone; New customer address is optional. Select Save customer and select to continue in the account form.
- Complete billing contact name, phone with country code, and real authority evidence reference. Select Continue to billing terms.

Step 2 - billing terms

- Enter closing day 1-31, calendar days after closing 0-366, credit limit in rupees, Active or Held, and a revision reason of 3-256 characters.
- A short month closes on its last day. Revised terms affect future bookings, not terms already frozen on bookings. Select Review account.

Step 3 - review and save

- Check bill-to customer, shipping customers, contact, payment terms, credit limit, status and reason. Use Back to correct the draft.
- Confirm the billing-contact authority attestation, then Save account revision. The bill-to customer cannot be changed after creation.

Rates, statements and credit exceptions

- Open the account to inspect revision history, monthly statements and negotiated rates. Load more records when needed.
- Rate rules use destination, service, inclusive minimum grams and exclusive maximum grams; a blank maximum means unlimited. Enter freight and packing in rupees, effective start/end in Kolkata and the real approval reference. Load remaining versions if requested before Publish rate version.

- Review an unexpired credit request and enter an approval reason before Approve this booking only. This does not remove an account hold or clear overdue bills.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Customer name prefix: The first part of the existing customer name. Enter at least three characters to search. Use when shown for the selected action.
- Account name: A short name you recognise for this billing account. Required when this field is shown.
- Billing contact name: The person who handles the customer’s bills. Required when this field is shown.
- Billing contact phone: That person’s phone number, including the country code, such as +91. Required when this field is shown.
- Contact authority evidence reference: A real record showing that this person may handle billing. Do not invent proof. Required when this field is shown.
- Monthly closing day (1-31): The day each month when the billing period closes. A short month uses its last day. Required when this field is shown.
- Calendar days after closing: How many days after closing the customer has to pay. Enter 0 to 366. Required when this field is shown.
- Credit limit (₹): The maximum credit allowed for this account, in rupees. Required when this field is shown.
- Account status: Active permits normal use. Held stops normal use of the credit account. Use when shown for the selected action.
- Reason for this revision: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Effective from (Asia/Kolkata): Enter the effective from (asia/kolkata) for this action, using the time zone shown. Required when this field is shown.
- Effective until (Asia/Kolkata): Enter the effective until (asia/kolkata) for this action, using the time zone shown. Required when this field is shown.
- Rate approval reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Required when this field is shown.
- Service: Select the service appropriate to the action explained above. Use when shown for the selected action.
- Credit exception approval reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Shipping customers: Existing customers allowed to use this billing account. At least one
- Contact authorisation confirmation: Confirm that the billing contact is authorised. Required
- Destination / minimum and maximum weight / freight / packing: Each negotiated rate row defines a destination, weight range and price. Weight is grams; money is rupees in the editor. When publishing

negotiated rates

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Customer accounts

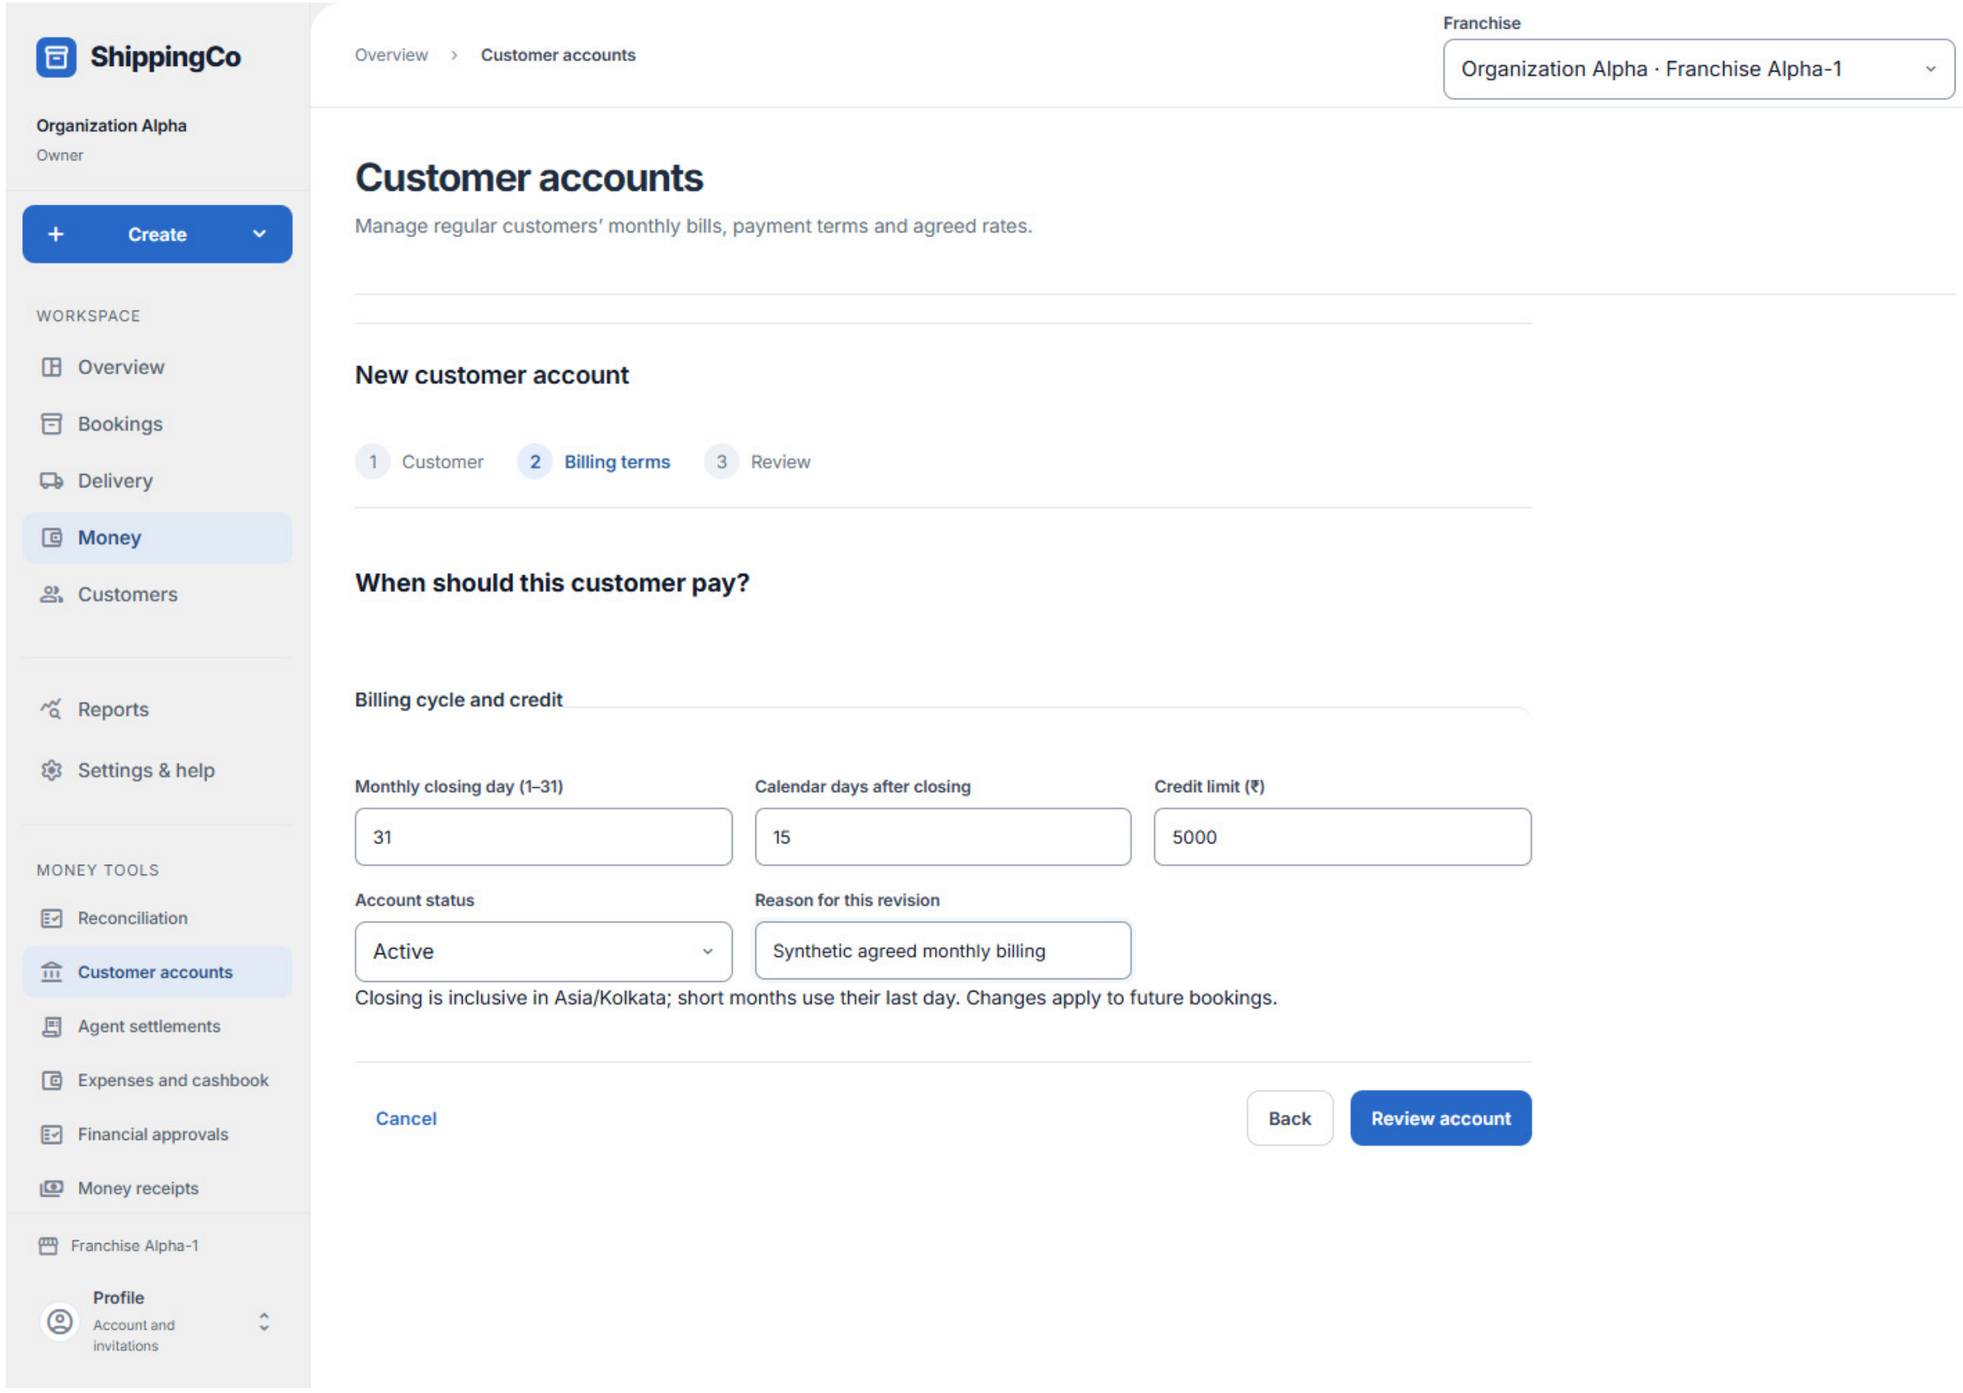
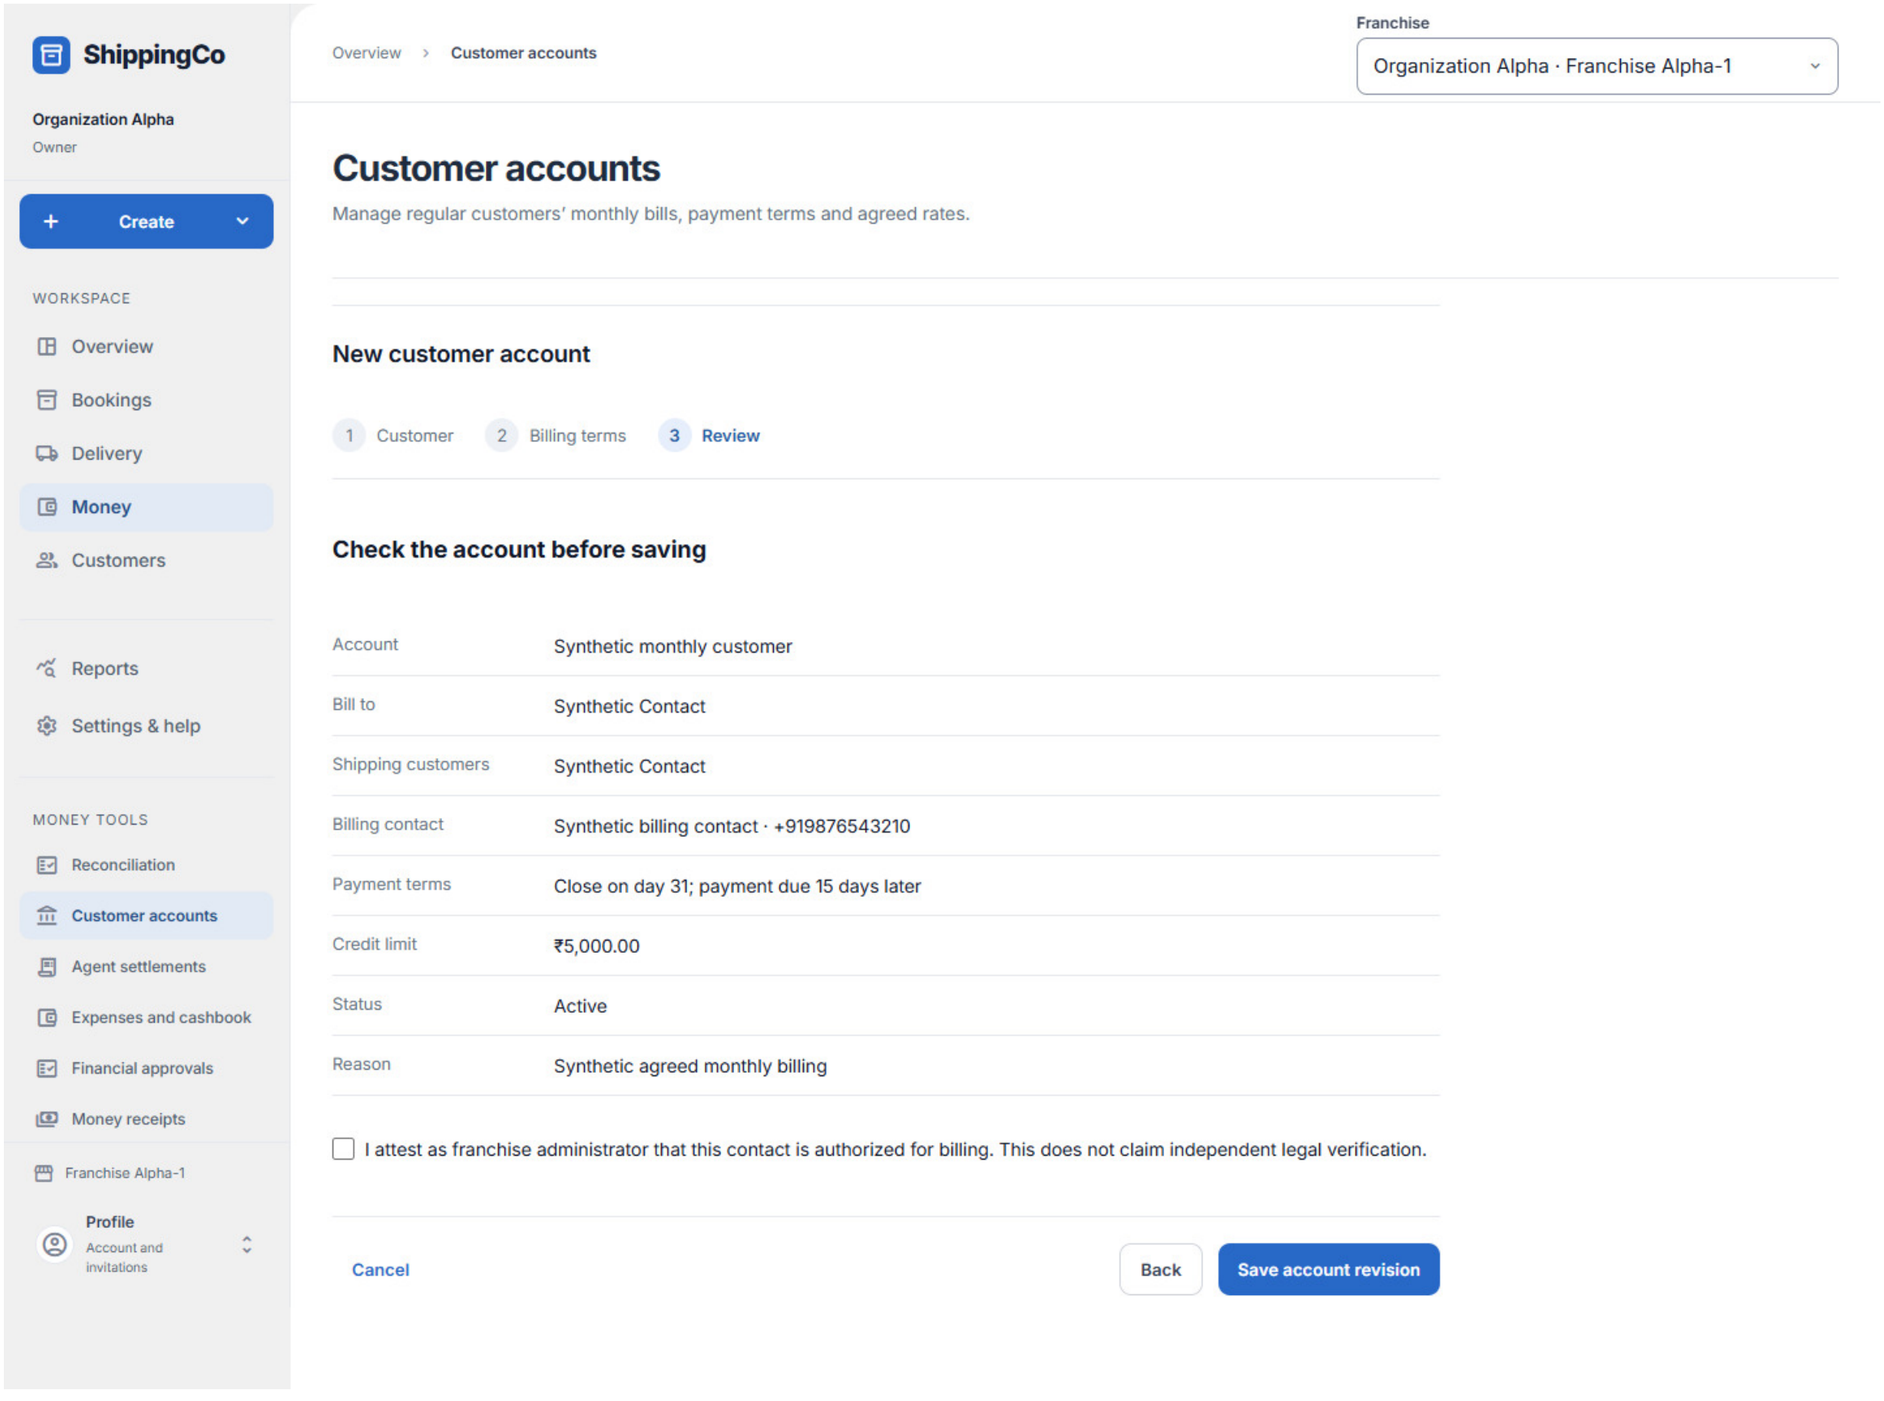
Billing terms.



Customer accounts

Final account review.



Customer statements

What this helps you do

- Review and issue a statement of existing account charges and payments.

Open this feature

- Money > Customer accounts > select account > Monthly statements.
- Check the active branch first. Available actions depend on your role and the selected record.

Preview the period

- Enter required Period start and Period end in the displayed Asia/Kolkata period, then Preview statement.
- Review opening, charges, credits, payments, refunds and closing. Debt, refundable credit and unallocated advance are separate values.
- Open shipment for a ledger row. Expand Source charge, tax and allocation evidence to inspect original charges, tax, receipt, applied payments and corrections.
- Expand Advance and return evidence to compare received, allocated, seller COD reserved, returned and unused money.

Issue, reopen and export

- An administrator can Issue statement from a non-empty preview. Preview alone does not issue a document; issuing groups existing charges without receiving money or creating another sale.
- Open a revision in Issued history to read that saved statement. Check the previous-statement reference and use More statements for older records.
- With export access, Capture private CSV from the issued statement. Download retained CSV retrieves the saved export. Keep its private customer and payment details secure.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Period start: Enter the period start for this action, using the time zone shown. Use when shown for the selected action.
- Period end: Enter the period end for this action, using the time zone shown. Use when shown for the selected action.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.

- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Money received

What this helps you do

- Record customer money actually received and apply it to the right bills.

Open this feature

- Money > Money receipts.
- Check the active branch first. Available actions depend on your role and the selected record.

Find the payer and review payment

- Search using at least three customer-name characters, select the correct payer and inspect existing receipts before adding another payment. Receipt reference opens a known saved receipt.
- Enter the actual positive Amount received in rupees. Choose Receiving account / cash drawer first, then an allowed Receipt method. Enter the actual received time in Kolkata and initial receiver/custodian. The private external reference is optional.
- Choose the payment context and enter amounts against the intended bookings. Allocations cannot exceed the receipt total. Unallocated money remains customer advance.
- Confirm I confirm this money was actually collected. Select Review payment, check payer, amount, method and allocations, then Confirm money received. Check the saved receipt before recording another payment.

Advance and corrections

- Apply existing advance to the correct bills without recording a second receipt.
- An administrator can choose Original allocation, Release amount and Correction reason, then Release allocation (admin). Money returns to advance; this does not refund it.
- Unused advance returns have a separate request, independent approval and actual-return workflow on the receipt.

Administrator receiving accounts

- Select New receiving account. Enter Account / drawer name, allowed methods and Active for new receipts. Cash drawers use cash only; Other requires Named other method.
- Save receiving account and check its revision. Edit account revises the saved configuration.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Customer name prefix: The first part of the existing customer name. Enter at least three characters to search. Use when shown for the selected action.

- Receipt reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Amount received (₹): Enter the actual amount in rupees. Use no more than two decimal places. Required when this field is shown.
- Receiving account / cash drawer: Select the receiving account / cash drawer involved in this action; check its account and responsible person. Use when shown for the selected action.
- Receipt method: Choose how the money was paid or checked. Use the option that actually applies. Use when shown for the selected action.
- Money received at (Asia/Kolkata): Enter when the event really happened. Use the time zone named in the label. Use when shown for the selected action.
- Receiver / initial custodian: The staff member who first received and held the money. Use when shown for the selected action.
- Private external reference (optional): Use the reference from the matching saved record or real supporting document. Do not invent one. Optional
- Payment context: The payment context for the bill allocation; selecting it does not itself record money. Use when shown for the selected action.
- Original allocation: Select the original allocation involved in this action; check its account and responsible person. Use when shown for the selected action.
- Release amount (₹): Enter the actual amount in rupees. Use no more than two decimal places. Use when shown for the selected action.
- Correction reason: Explain why you are making this request or change. Use the real business reason. Use when shown for the selected action.
- Account / drawer name: Select the account / drawer name involved in this action; check its account and responsible person. Required when this field is shown.
- Named other method: Choose how the money was paid or checked. Use the option that actually applies. Required when this field is shown.
- Apply to booking: How much of this receipt pays each selected bill. The total cannot exceed money received. Optional; unused money stays as advance
- I confirm this money was actually collected: Select only after the money has been received. Required to record the receipt
- Allowed methods / Active for new receipts: Choose the supported payment methods and whether staff can use this receiving account. Cash uses its own drawer. Administrator account setup

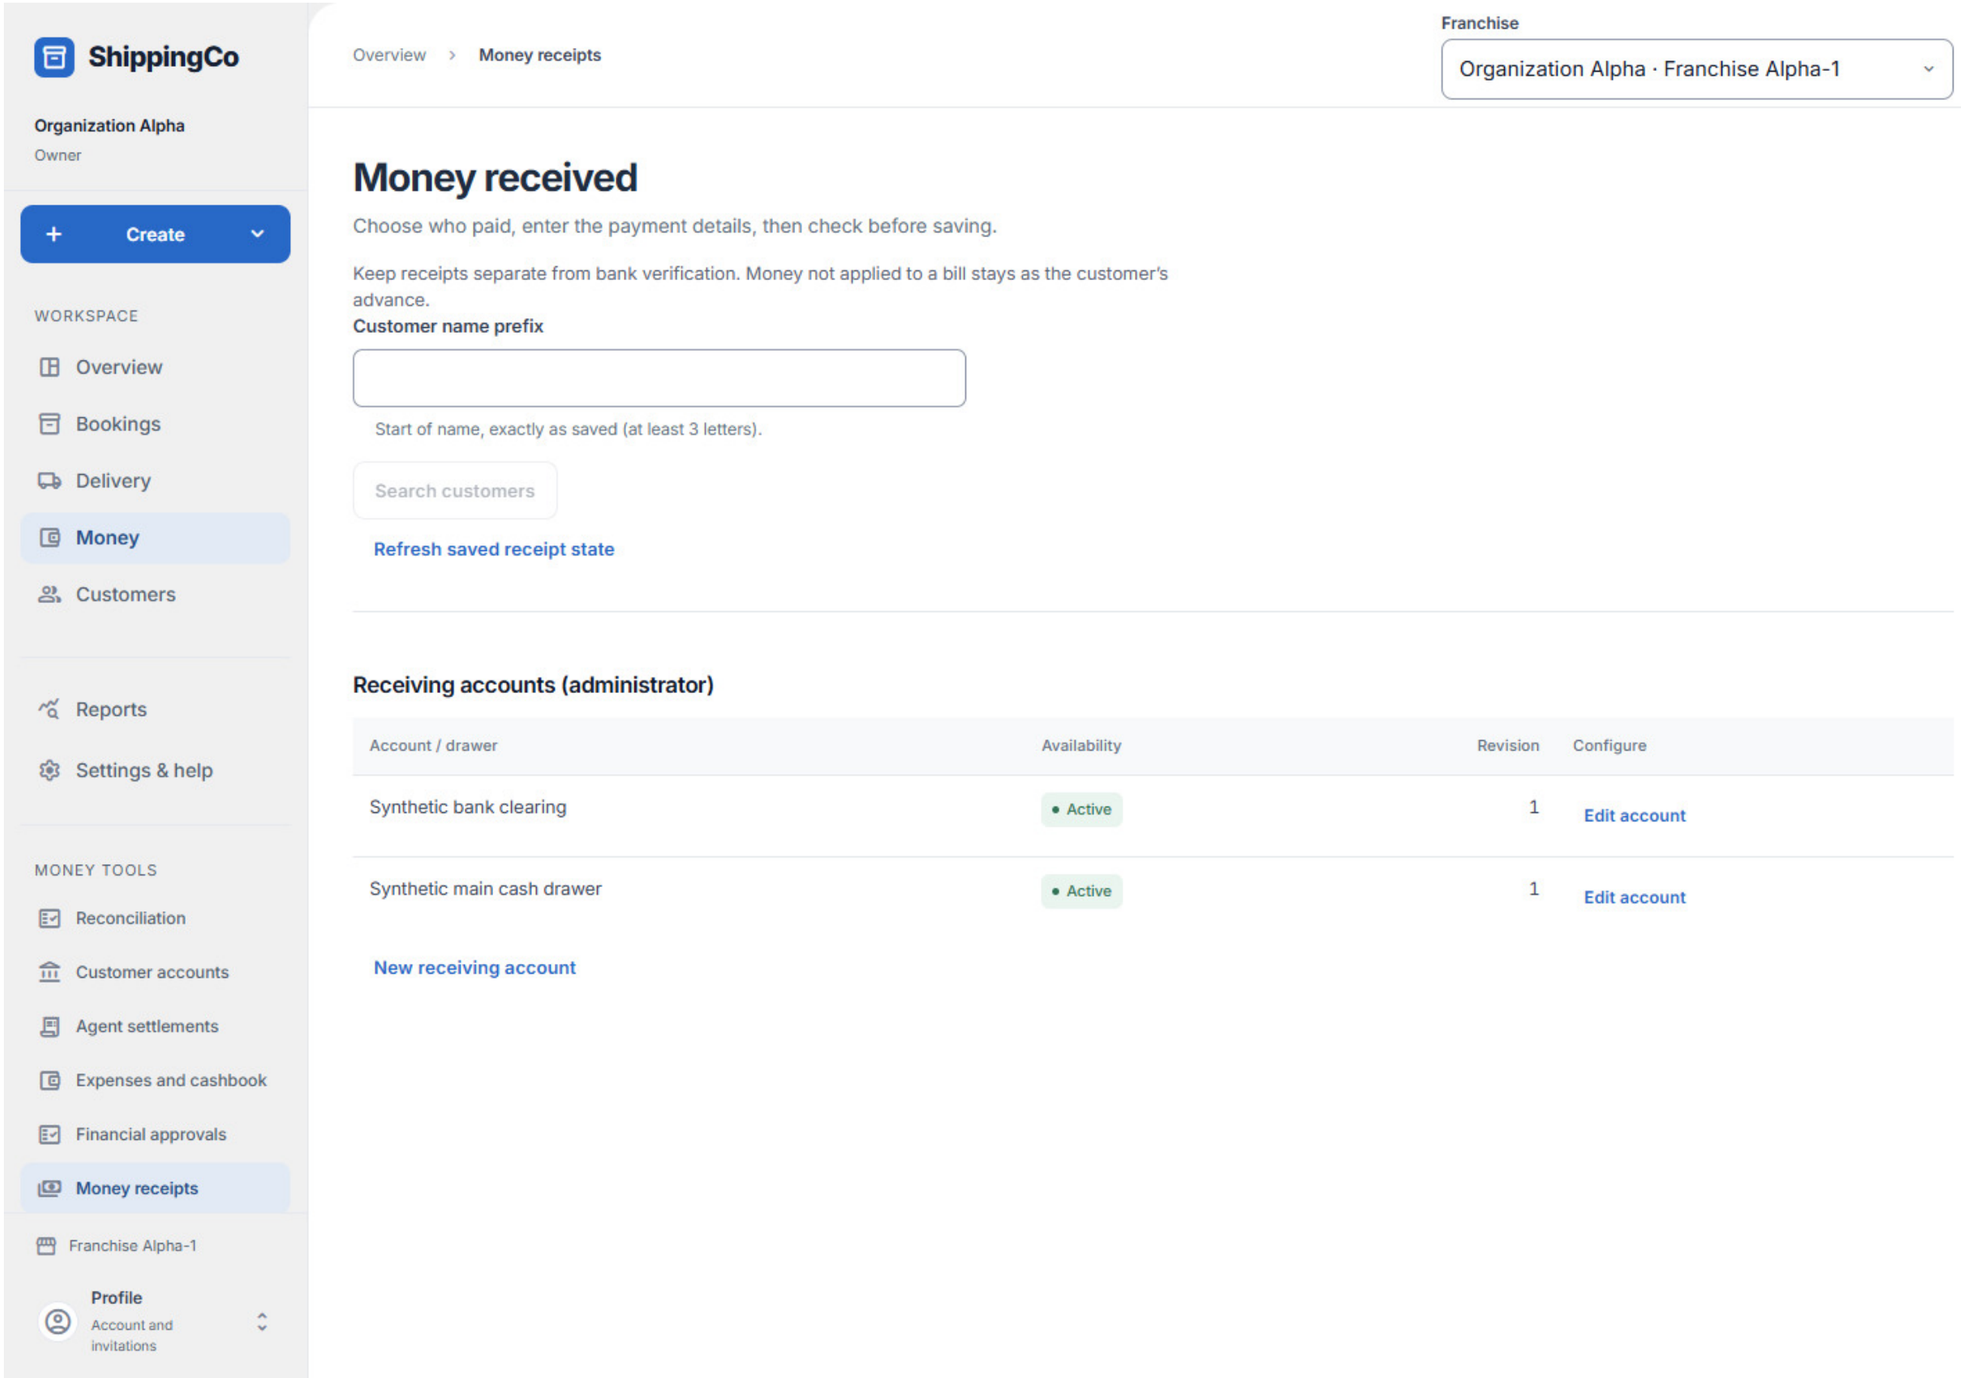
If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.

- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Money received

Money received screen. Actual app screen using example data; names, dates and amounts are examples, not your business records.



Expenses and fund requests

What this helps you do

- Prepare expenses and fund requests for independent review, then inspect recorded cashbook sources.

Open this feature

- Money > Expenses and cashbook > Expense and fund requests.
- Check the active branch first. Available actions depend on your role and the selected record.

Prepare expense or fund request

- Select Add expense or cash movement or Start a request. Choose Request kind first because the required fields change with the kind.
- Select Source cash location and, for a transfer, Target cash location. Choose a method allowed by the source account. For an expense choose Expense category and Private payee.
- Enter amount in rupees, Responsible employee, actual Occurred at time in Kolkata and Reason. Submit for different-admin review. A submitted request is not yet an applied expense.
- Open the saved request to inspect evidence and status. Add supporting proof where offered and check it saved.

Review or correct

- A different authorised administrator reviews the request and supplies Review decision and Review reason. The requester cannot approve their own request. Check the resulting saved status.
- Use a linked correction for a wrong applied record. Replacement recorded amount means the corrected total, not the difference; zero annuls the recorded amount while retaining history.
- For fee corrections distinguish earned expense, previous payment, replacement direct payment and advance applied. Seller payment corrections retain their original COD allocation and require the private payment reference.

Filters and cashbook sources

- Request status filters the list. Expand Filters for kind, expense category, method, source, responsible employee and occurrence times. The before time is exclusive.
- Open Cashbook sources. Enter from and through day, optionally choose source order, method, kind and location, then Capture source snapshot.
- Use Saved cashbook snapshot reference to reopen a known capture. Inspect its saved sources and use export where permitted. Internal movements and allocations are not additional sales.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Request status: Choose the state or decision that matches the record you have reviewed. Use when shown for the selected action.
- Review decision: Choose the state or decision that matches the record you have reviewed. Use when shown for the selected action.
- Review reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Request kind: Select the request kind appropriate to the action explained above. Use when shown for the selected action.
- Source cash location: Select the source cash location involved in this action; check its account and responsible person. Use when shown for the selected action.
- Target cash location: Select the target cash location involved in this action; check its account and responsible person. Use when shown for the selected action.
- Private seller payment reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Required when this field is shown.
- Payment method: Choose how the money was paid or checked. Use the option that actually applies. Use when shown for the selected action.
- Expense category: Choose rent, utilities, supplies, transport, maintenance or other. Use when shown for the selected action.
- Private payee: The actual person or supplier paid. Required when this field is shown.
- Replacement direct fee payment (₹): Enter the value in rupees, with at most two decimal places. Check the limit shown on screen. Required when this field is shown.
- Replacement advance applied (₹): Enter the value in rupees, with at most two decimal places. Check the limit shown on screen. Required when this field is shown.
- Responsible employee: Choose the actual person responsible from the available list. Use when shown for the selected action.
- Occurred at (Kolkata): Enter when the event really happened. Use the time zone named in the label. Required when this field is shown.
- Reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Filter request kind: Select the filter request kind appropriate to the action explained above. Use when shown for the selected action.
- Filter expense category: Select the filter expense category appropriate to the action explained above. Use when shown for the selected action.
- Filter expense method: Choose how the money was paid or checked. Use the option that actually applies. Use when shown for the selected action.
- Filter source location: Select the filter source location involved in this action; check its account and responsible person. Use when shown for the selected action.

- Employee: Choose the actual person responsible from the available list. Use when shown for the selected action.
- Filter responsible employee reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Filter occurred from (Kolkata): Enter when the event really happened. Use the time zone named in the label. Use when shown for the selected action.
- Filter occurred before (Kolkata; exclusive): Enter when the event really happened. Use the time zone named in the label. Use when shown for the selected action.
- Cashbook from day: Enter the cashbook from day for this action, using the time zone shown. Required when this field is shown.
- Cashbook through day: Enter the cashbook through day for this action, using the time zone shown. Required when this field is shown.
- Source order: The presentation order of captured source rows. Use when shown for the selected action.
- Source payment method: Choose how the money was paid or checked. Use the option that actually applies. Use when shown for the selected action.
- Source kind: Select the source kind appropriate to the action explained above. Use when shown for the selected action.
- Source location filter: Select the source location filter involved in this action; check its account and responsible person. Use when shown for the selected action.
- Saved cashbook snapshot reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Amount (₹) / Gross earned expense (₹) / Previous recorded payment (₹): The amount for the selected request. Check whether this is a new payment, an earned fee or an earlier recorded payment. As shown for the request kind
- Replacement recorded amount (₹; zero annuls): The corrected amount. Zero cancels the old recorded amount through a correction; it does not erase history. For a recording correction

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Expenses and fund requests

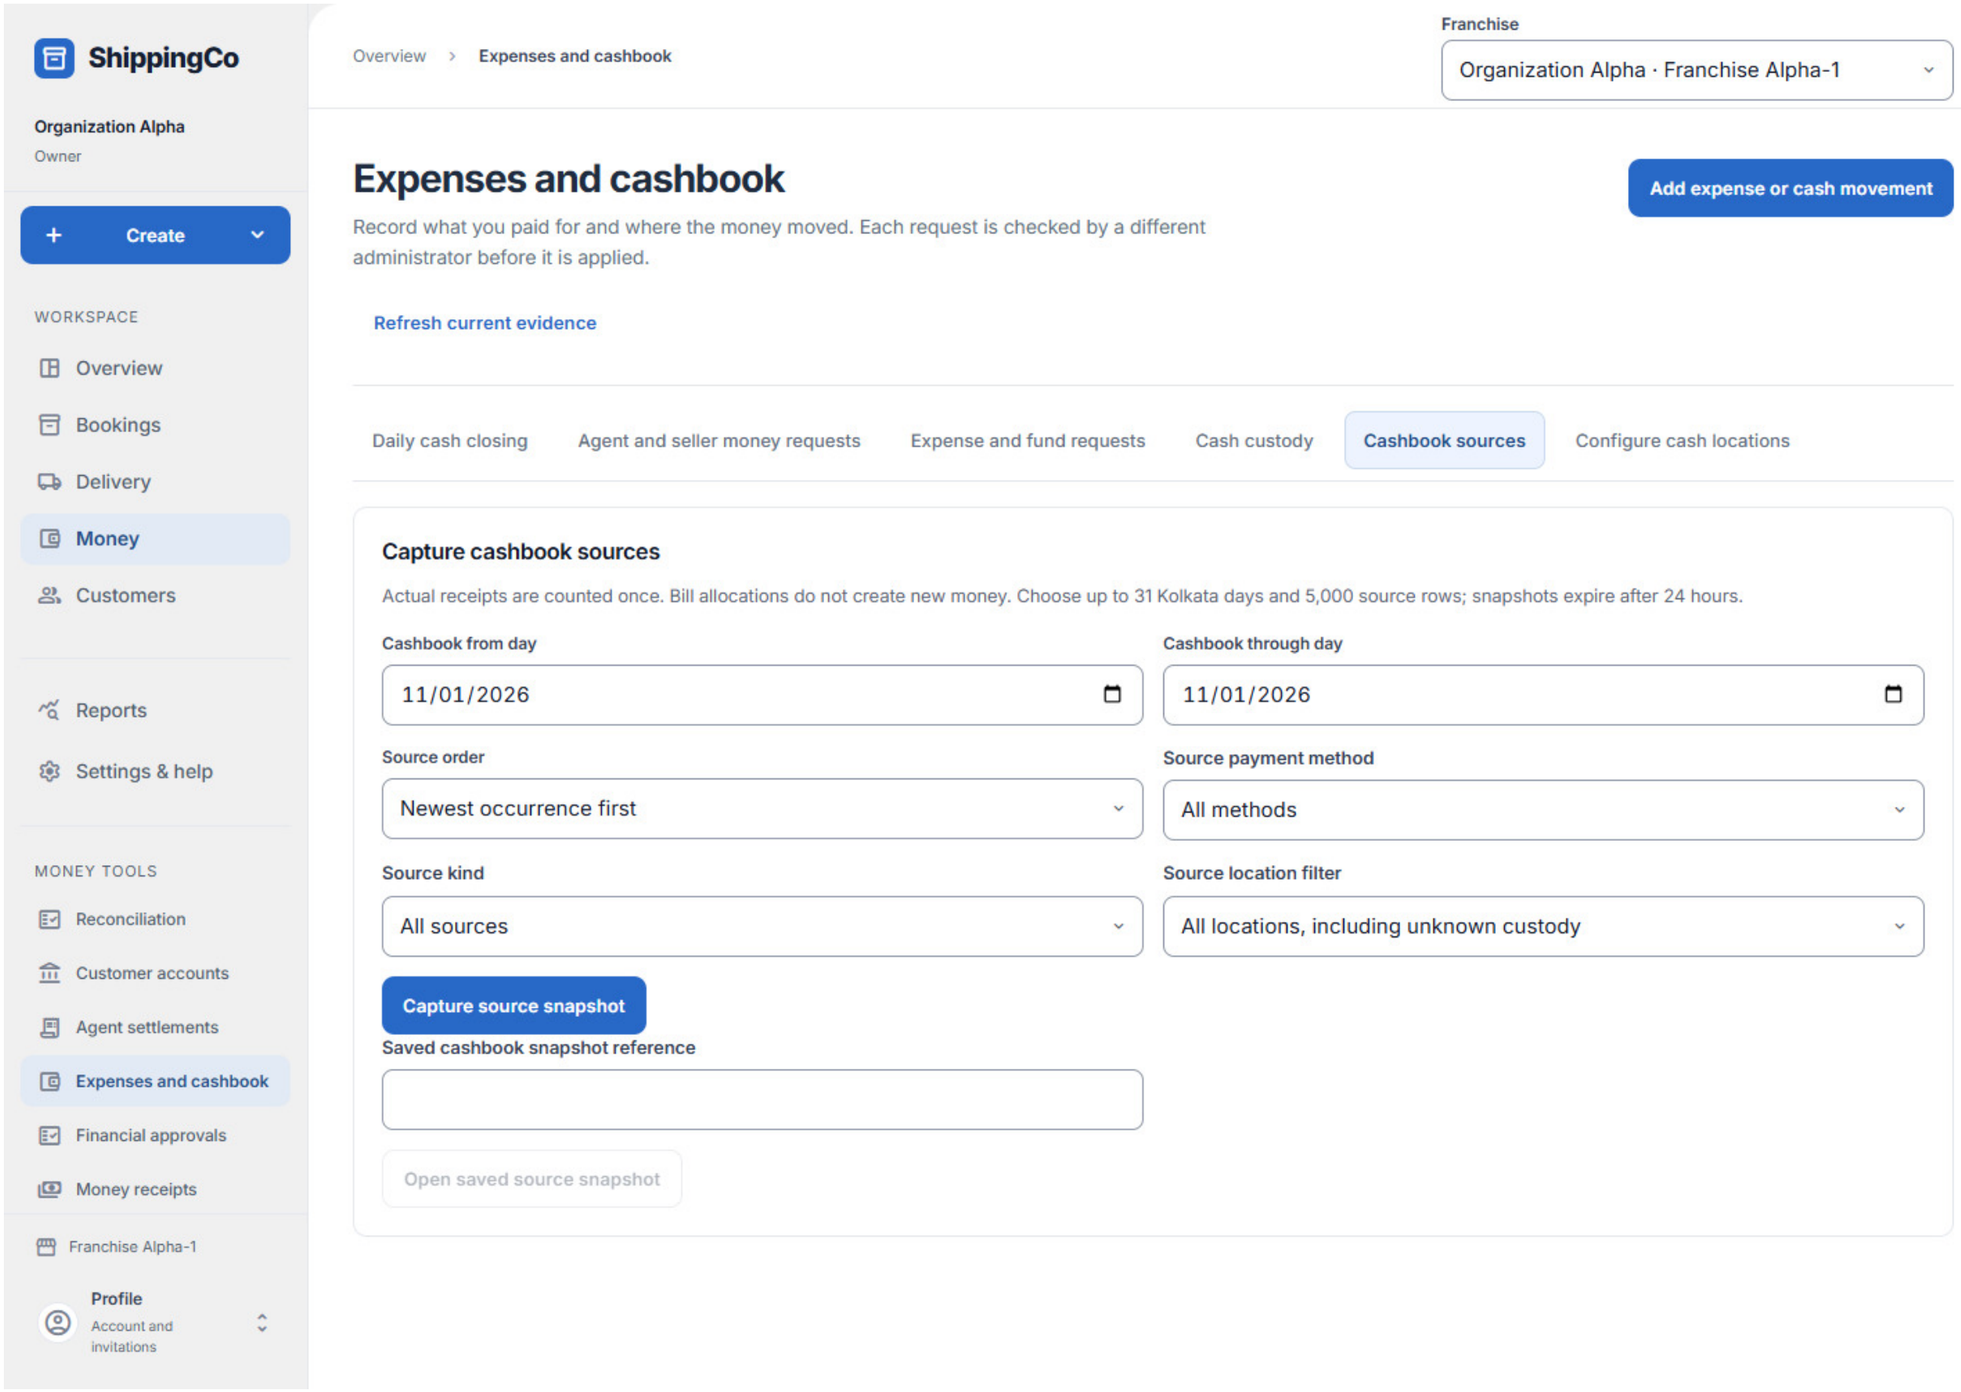
Cashbook source snapshot.



Cash locations

What this helps you do

- Name the accounts and custodians that hold your money.

Open this feature

- Money > Expenses and cashbook > Configure cash locations.
- Check the active branch first. Available actions depend on your role and the selected record.

Create a location

- Configure the receiving account in Money receipts first, then select New cash location here.
- Choose Location receiving account. For cash choose the Named cash custodian responsible for holding it. Enter a recognisable Cash location name and choose Location availability.
- Select Save location revision and check the list. Active locations can be used for new movements.

Inspect or retire

- Select a saved location or expand Find an older location by reference. Enter Cash location reference and choose Open location, including inactive.
- Revise the name or availability and save. Account and custodian are fixed after creation; use a new location for a different account or custodian.
- Inactive locations retain earlier history. Inactivation does not erase custody or money records.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Cash location reference: The saved reference used to open an older or inactive location. Use when shown for the selected action.
- Location receiving account: Select the existing receiving account; required on creation and fixed afterwards. Use when shown for the selected action.
- Named cash custodian: Select the current employee responsible for this cash location; fixed afterwards. Use when shown for the selected action.
- Cash location name: A clear name for this cash-holding location. Required when this field is shown.
- Location availability: Active permits new movements; inactive retains history. Use when shown for the selected action.

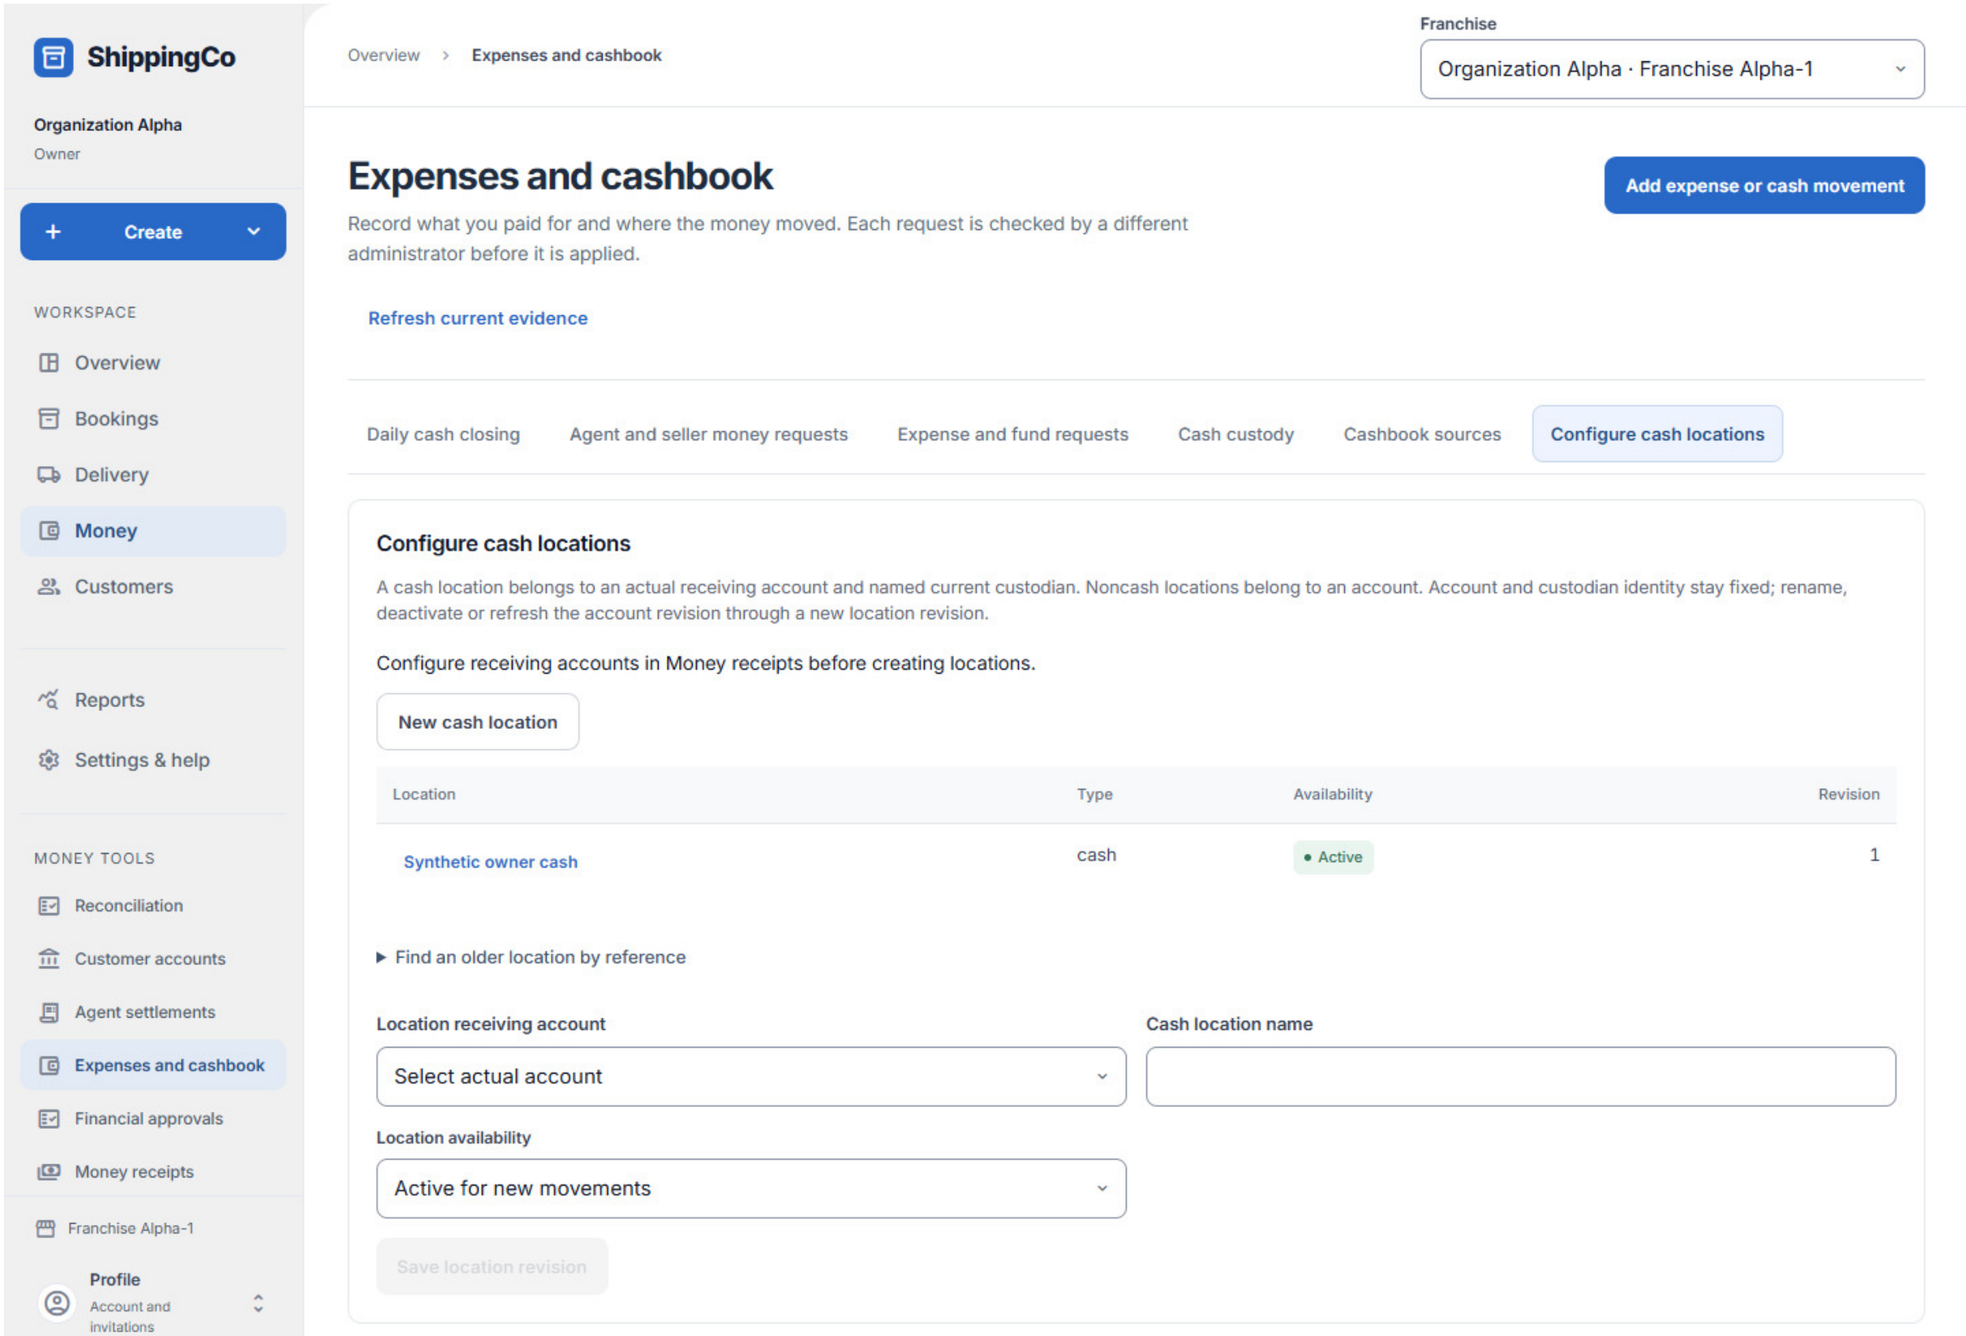
If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.

- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Cash locations

Cash locations screen. Actual app screen using example data; names, dates and amounts are examples, not your business records.



Handing over cash

What this helps you do

- Record cash passed between custodians and the receiver’s actual acknowledgement.

Open this feature

- Money > Expenses and cashbook > Cash custody.
- Check the active branch first. Available actions depend on your role and the selected record.

Request acknowledgement

- Choose Sending cash location and an eligible Receiving custodian location for the actual people involved.
- Enter Handover amount in rupees, actual Cash handed over at time in Kolkata and Handover reason. Select Request custody acknowledgement.
- Check Permitted handover inbox. A request alone does not prove the cash was received.

Receiver response

- The receiving custodian opens the handover, chooses Custody response, enters Actually received cash and Custody response reason, then Record custody response.
- Record the actual count even when it differs; explain the difference instead of changing the count to make it match.
- Inspect acknowledgement history and attribution. Use Earlier acknowledgements, Latest acknowledgements and attribution page controls as needed.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Sending cash location: Select the sending cash location involved in this action; check its account and responsible person. Use when shown for the selected action.
- Receiving custodian location: Select the receiving custodian location involved in this action; check its account and responsible person. Use when shown for the selected action.
- Handover amount (₹): Enter the actual amount in rupees. Use no more than two decimal places. Required when this field is shown.
- Cash handed over at (Kolkata): Enter when the event really happened. Use the time zone named in the label. Required when this field is shown.
- Handover reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Custody response: The response matching what the receiving custodian actually received. Use when shown for the selected action.

- Actually received cash (₹): Enter the value in rupees, with at most two decimal places. Check the limit shown on screen. Required when this field is shown.
- Custody response reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Closing a cash drawer

What this helps you do

- Compare a physical cash count with the drawer’s recorded activity.

Open this feature

- Money > Expenses and cashbook > Daily cash closing.
- Check the active branch first. Available actions depend on your role and the selected record.

Open the drawer session

- Choose Closing drawer to reveal its session controls. Inspect the latest drawer session before opening another. Select Business date.
- When an initial opening is required, enter Initial physical opening, Initial opening time in Kolkata and Opening reason, then Open drawer session.
- The permitted opening reviewer checks the exact evidence, enters Opening approval reason and selects Approve exact opening.
- For a wrong opening use corrected opening count, corrected opening time and supporting reason, then Save linked opening correction. Earlier evidence remains.

Count, submit and review

- Enter Physical ending count, Counted at and Count and difference explanation, then Save immutable count. The saved count cannot be overwritten.
- Review captured source records and the difference, then submit the exact saved count using the session action. Saving a count alone does not complete review.
- The permitted reviewer selects Closing review decision and enters Closing review reason, then Record closing review. Check status and revisions in Closing history.
- Use the offered linked correction or reopening action with its reason when needed. Carry-in observations do not spend or transfer funds.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Closing drawer: Select the closing drawer involved in this action; check its account and responsible person. Use when shown for the selected action.
- Business date: Enter the business date for this action, using the time zone shown. Required when this field is shown.
- Initial physical opening (₹): Enter the value in rupees, with at most two decimal places. Check the limit shown on screen. Required when this field is shown.

- Initial opening time (Kolkata): Enter when the event really happened. Use the time zone named in the label. Required when this field is shown.
- Opening reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Corrected opening count (₹): Enter the actual amount in rupees. Use no more than two decimal places. Required when this field is shown.
- Corrected opening time (Kolkata): Enter when the event really happened. Use the time zone named in the label. Required when this field is shown.
- Opening correction evidence and reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Opening approval reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Physical ending count (₹): Enter the actual amount in rupees. Use no more than two decimal places. Required when this field is shown.
- Counted at (Kolkata): Enter when the event really happened. Use the time zone named in the label. Required when this field is shown.
- Count and difference explanation: Explain the physical cash count and any difference from expected cash. Required when this field is shown.
- Closing review decision: Choose the state or decision that matches the record you have reviewed. Use when shown for the selected action.
- Closing review reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Agent money and seller COD

What this helps you do

- Keep seller COD, agent fees and agent advances distinct and traceable.

Open this feature

- Money > Agent settlements > Open COD and agent fees.
- Check the active branch first. Available actions depend on your role and the selected record.

Record COD or fee sources

- Choose Money action. For a seller beneficiary, leave Existing beneficiary blank to create or select one to revise; enter seller name and active state.
- For a COD obligation choose booked parcel, active seller beneficiary and explicit rupee amount. For reservation choose the active obligation and a collected receipt for the same customer. Seller COD remains separate from freight payment.
- For fee terms choose eligible agent, per-delivery or agreed-period basis, start and exclusive end in Kolkata, and explicit amount. For an earning choose the active fee-term revision and, for per-delivery fees, completed unearned delivery proof.
- Record money source only after checking the linked evidence. Use View records to show one catalogue; Refresh money sources and Load more retrieve current or remaining records. Saving a source does not move money.

Prepare an agent or seller payment request

- Open Expenses and cashbook > Agent and seller money requests. Choose request kind. For advance select payee agent. For fee select Recorded fee earning and enter Fee expense payee description.
- Enter Direct fee payment and Apply recorded advance separately. Select Original advance request when applying advance. Seller payment requires Reserved seller COD allocation and Private seller payment reference.
- Choose money source location, an allowed method, amount, responsible employee, occurrence time in Kolkata and reason. Submit agent money request for different-administrator review. Approval alone does not perform a bank transfer.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Money action: Select the money action appropriate to the action explained above. Use when shown for the selected action.
- Existing beneficiary (leave blank to create): Select the existing beneficiary (leave blank to create) appropriate to the action explained above. Use when shown for the selected action.

- Seller beneficiary name: Enter a short, clear name that your staff will recognise. Required when this field is shown.
- Booked parcel for COD: Choose the matching saved record. Check the customer and amount before continuing. Use when shown for the selected action.
- Active seller beneficiary: Select the active seller beneficiary appropriate to the action explained above. Use when shown for the selected action.
- Active COD obligation: Select the active cod obligation appropriate to the action explained above. Use when shown for the selected action.
- Collected receipt for same customer: Choose the matching saved record. Check the customer and amount before continuing. Use when shown for the selected action.
- Eligible fee agent: Choose the actual person responsible from the available list. Use when shown for the selected action.
- Fee basis: Select the fee basis appropriate to the action explained above. Use when shown for the selected action.
- Fee period starts in Kolkata: Enter the fee period starts in kolkata for this action, using the time zone shown. Required when this field is shown.
- Fee period ends in Kolkata (exclusive): Enter the fee period ends in kolkata (exclusive) for this action, using the time zone shown. Required when this field is shown.
- Active fee term revision: Select the active fee term revision appropriate to the action explained above. Use when shown for the selected action.
- Completed unearned delivery proof: Select the completed unearned delivery proof appropriate to the action explained above. Use when shown for the selected action.
- Explicit amount (INR rupees): Enter the actual amount in rupees. Use no more than two decimal places. Required when this field is shown.
- Agent money request kind: Choose the actual person responsible from the available list. Use when shown for the selected action.
- Advance payee agent: Choose the actual person responsible from the available list. Use when shown for the selected action.
- Recorded fee earning: Select the recorded fee earning appropriate to the action explained above. Use when shown for the selected action.
- Fee expense payee description: Choose the matching saved record. Check the customer and amount before continuing. Required when this field is shown.
- Direct fee payment (INR rupees): Enter the value in rupees, with at most two decimal places. Check the limit shown on screen. Required when this field is shown.
- Apply recorded advance (INR rupees): Enter the value in rupees, with at most two decimal places. Check the limit shown on screen. Required when this field is shown.
- Original advance request: Select the original advance request appropriate to the action explained above. Use when shown for the selected action.

- Reserved seller COD allocation: Select the reserved seller cod allocation involved in this action; check its account and responsible person. Use when shown for the selected action.
- Private seller payment reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Required when this field is shown.
- Money source location: Select the money source location involved in this action; check its account and responsible person. Use when shown for the selected action.
- Money payment method: Choose how the money was paid or checked. Use the option that actually applies. Use when shown for the selected action.
- Agent money amount (INR rupees): Enter the actual amount in rupees. Use no more than two decimal places. Required when this field is shown.
- Money responsible employee: Choose the actual person responsible from the available list. Use when shown for the selected action.
- Money occurrence time in Kolkata: Enter when the event really happened. Use the time zone named in the label. Required when this field is shown.
- Money request reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Agent money and seller COD

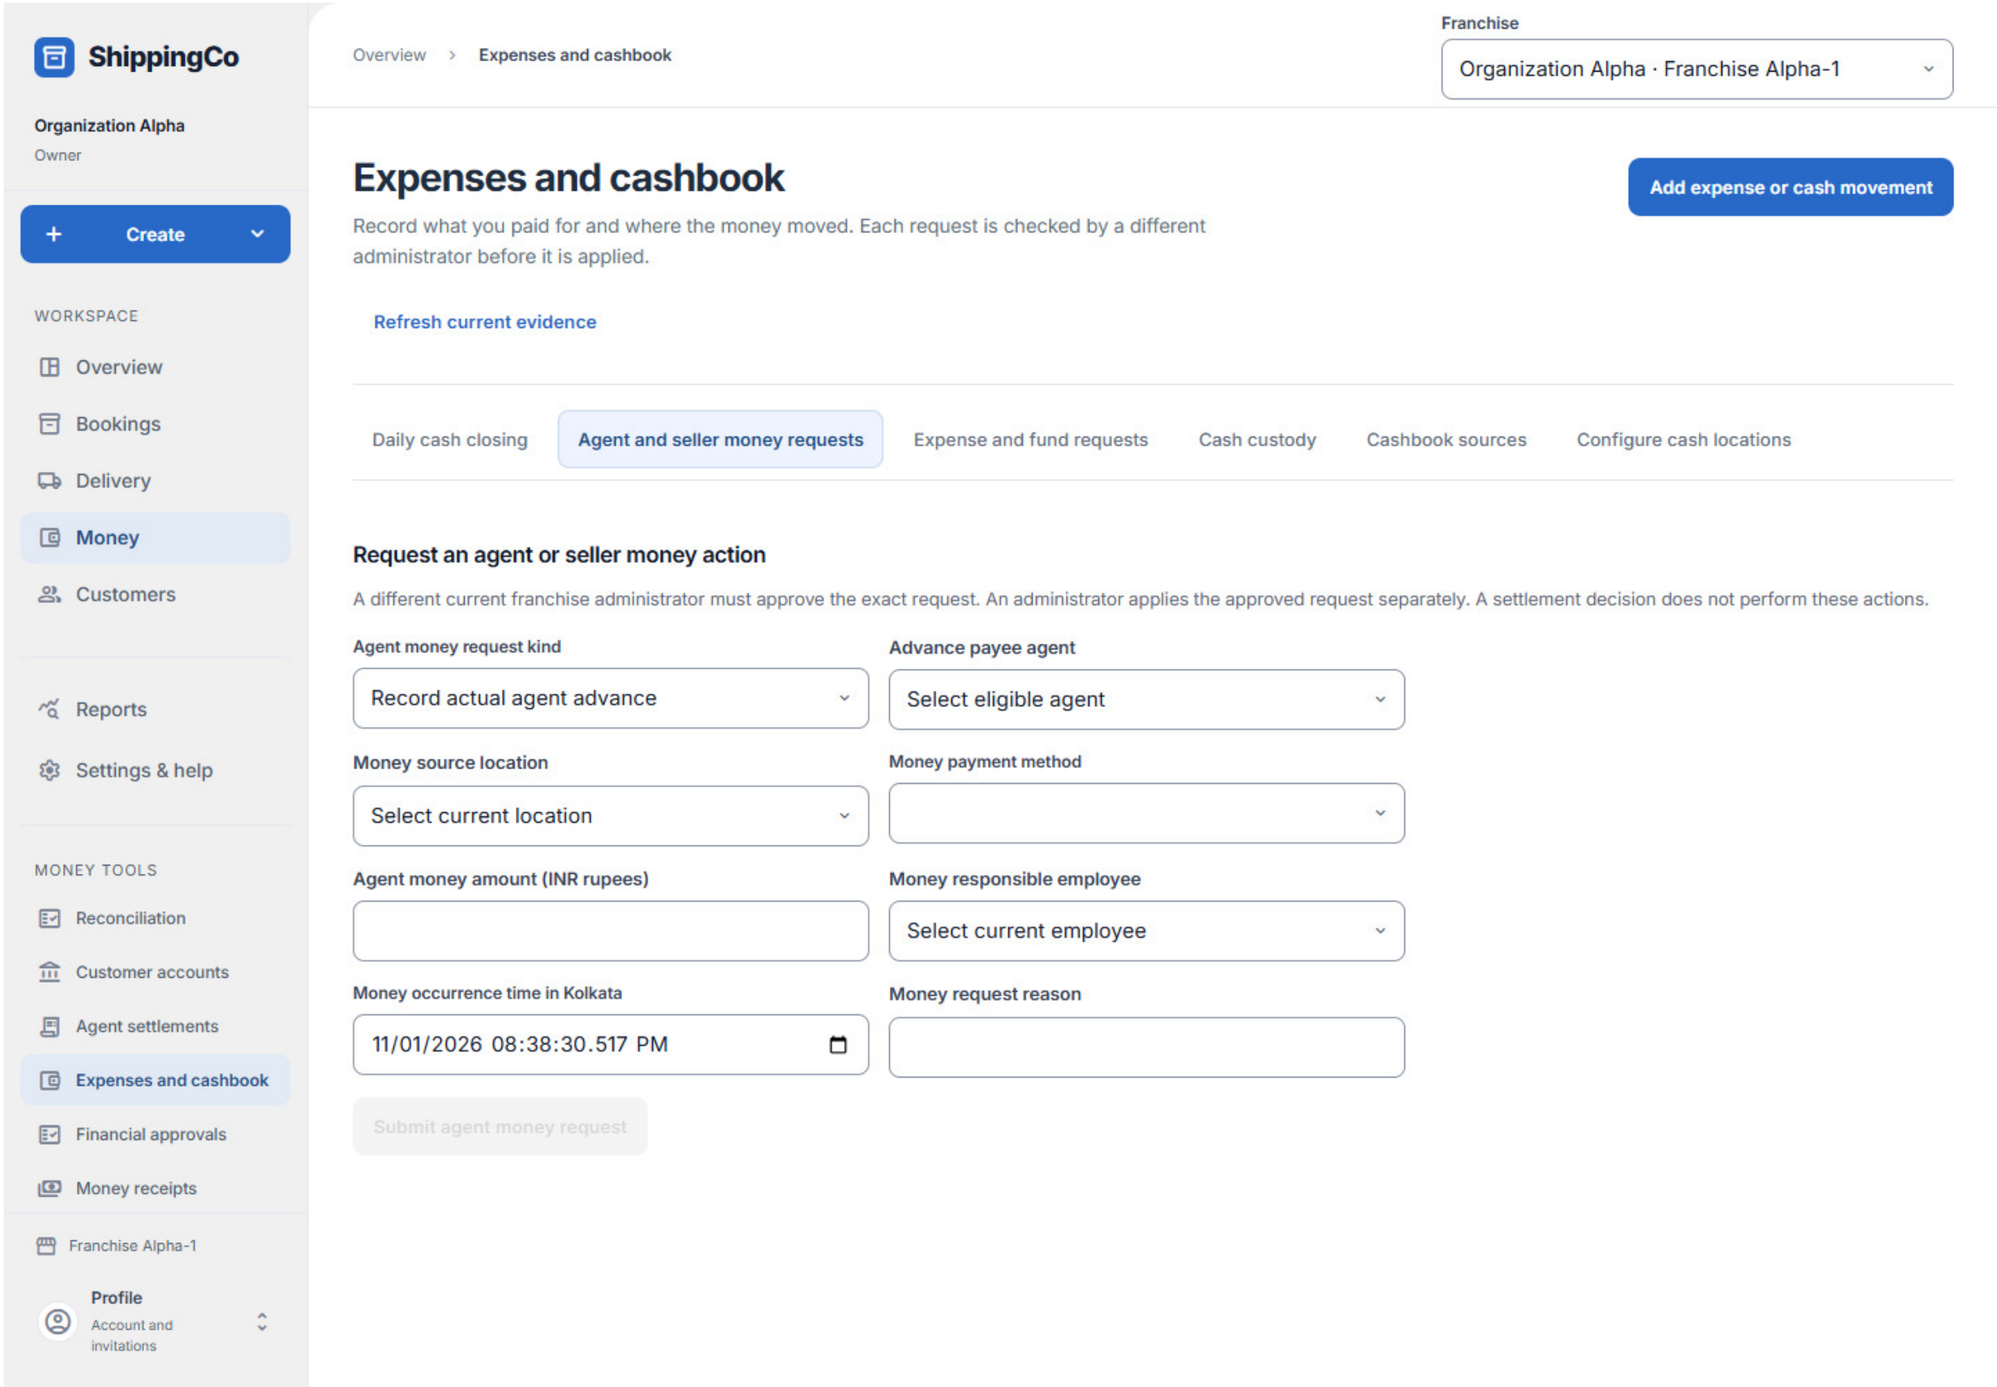
Agent and seller money request.



Agent daily statements

What this helps you do

- Capture an agent’s daily cash statement and send it for independent review.

Open this feature

- Money > Agent settlements.
- Check the active branch first. Available actions depend on your role and the selected record.

Prepare the daily count

- Choose Agent reference; delivery agents are restricted to their own identity. Enter Kolkata statement day, Cash count time in Kolkata, Physical cash counted and Count or correction reason.
- The count time must be on the statement day and cannot be in the future. Capture statement evidence, inspect the captured sources and difference, then Submit captured statement.
- Start a new count clears the current draft but retains earlier saved evidence.

Review, correct and export

- Open a day in Saved statements to inspect its exact revision. Agents see their own evidence; operators see statements they prepared.
- A different authorised administrator enters Independent review reason and selects Approve statement or Reject statement. Approval does not hand over cash or pay fees.
- Prepare linked correction creates a fresh count linked to the previous submission. Open prior revision shows the preserved earlier record.
- With export access, Capture statement CSV, then Download captured statement CSV. Check revision, captured status, cutoff and expiry; the saved export lasts 24 hours.
- Open COD and agent fees to work with source evidence. View records selects one catalogue at a time. Delivery agents can open cash handovers where offered; Open daily statements returns here.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Agent reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Kolkata statement day: Enter the kolkata statement day for this action, using the time zone shown. Required when this field is shown.
- Cash count time in Kolkata: Enter when the event really happened. Use the time zone named in the label. Required when this field is shown.

- Physical cash counted (₹): Enter the actual amount in rupees. Use no more than two decimal places. Required when this field is shown.
- Count or correction reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Independent review reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Returning unused customer advance

What this helps you do

- Request and record an actual return of unused customer advance.

Open this feature

- Money > Money receipts > select customer > Open receipt > Unused advance refunds.
- Check the active branch first. Available actions depend on your role and the selected record.

Request unused advance back

- Inspect unallocated and already returned money on the receipt. The illustrated receipt has no unused advance, so its refund request is correctly unavailable.
- Enter Advance refund reason of 3-500 characters and positive Advance refund amount in rupees, within available unallocated advance. Select Request unused advance refund. Current seller COD reservations are checked.

Independent decision and actual return

- A different current franchise administrator reviews the request and reason, then Approve advance refund or Reject advance refund. Approval is not a transfer.
- For an approved request choose Refund source location, then an allowed Advance return method. Enter the actual returned time in Kolkata. Use current return time only if accurate.
- Enter Returned to / customer acknowledgement reference and Private advance return reference. Use real private references, not card numbers or credentials. Accepted reference characters include letters, numbers, colons, underscores and hyphens.
- After money was actually returned, enter the reason and Record actual advance return. Check returned total and event history. Load remaining history before a decision if requested.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Advance refund reason: Explain why you are making this request or change. Use the real business reason. Use when shown for the selected action.
- Advance refund amount (₹): Enter the actual amount in rupees. Use no more than two decimal places. Use when shown for the selected action.
- Refund source location: Select the refund source location involved in this action; check its account and responsible person. Use when shown for the selected action.
- Advance return method: Choose how the money was paid or checked. Use the option that actually applies. Use when shown for the selected action.

- Advance returned at (Asia/Kolkata): Enter when the event really happened. Use the time zone named in the label. Use when shown for the selected action.
- Returned to / customer acknowledgement reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Private advance return reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Shipment costs

What this helps you do

- Record purchase-cost evidence and allocate it to the bookings it belongs to.

Open this feature

- Reports > Choose a report > What did each shipment cost? > Add shipment cost.
- Check the active branch first. Available actions depend on your role and the selected record.

Step 1 - cost details

- Select Evidence source and Cost category: courier, packing, agent or payment.
- For Manual invoice or document line choose actual or estimated status and enter source total in rupees, supplier identity, document identity and line identity. These identify one cost; revise the same source when an invoice replaces an estimate.
- For Existing applied expense choose an already applied expense. Attribution does not approve or pay it. Per-delivery agent fees use their proof; agreed-period fees need explicit allocation.
- For Not applicable / no charge declaration supply evidence explaining why the category does not apply. Missing evidence is not zero.
- Enter effective time when shown, Evidence reference, and Evidence and allocation reason. Continue to bookings.

Step 2 - booking allocations

- Choose Allocation booking and Whole booking or an individual parcel, then enter that booking’s share in rupees. Add booking allocation for shared costs or remove an extra row.
- Check declared amount and source remainder. Unallocated money remains a remainder. Not-applicable declarations have no amount field; an expense corrected to zero needs explicit zero allocations.
- Select Save cost evidence or Save cost revision. A revision replaces the complete allocation list and retains earlier evidence. Use Back to cost details to fix the draft.

Rate estimates and imports

- For Approved purchase rate estimate choose the approved native import and Rate estimate booking. Preview resolves the saved service, destination and weight; review the evidence before applying.
- Add evidence to import batch queues a draft, not an applied cost. Preview form batch after assembling rows.
- Manual cost CSV requires the exact displayed header, UTF-8, at most 100 rows and 64 KiB. Amounts are integer paise and effective time is ISO. Each CSV row allocates the whole source to its booking and optional parcel; use the form for split allocations.

- Review every preview row and error. Apply exact preview atomically only when all rows are valid. A stale or conflicting source prevents all rows applying; check current evidence and prepare a new preview.
- Inspect a recorded cost source for revision history or Revise this cost and allocations. Recording costs does not change selling prices or move money.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Evidence source: Where the cost record came from: select the actual source shown. Use when shown for the selected action.
- Cost category: Choose courier, packing, agent or payment. Use when shown for the selected action.
- Cost evidence status: Choose recorded actual or estimated purchase cost for manual evidence. Use when shown for the selected action.
- Source total (₹): Enter the value in rupees, with at most two decimal places. Check the limit shown on screen. Required when this field is shown.
- Supplier identity: Use the reference from the matching saved record or real supporting document. Do not invent one. Required when this field is shown.
- Document identity: Use the reference from the matching saved record or real supporting document. Do not invent one. Required when this field is shown.
- Document line identity: Use the reference from the matching saved record or real supporting document. Do not invent one. Required when this field is shown.
- Applied expense: An already applied expense whose saved amount and occurrence time provide the evidence. Use when shown for the selected action.
- Approved purchase rate import: The approved native rate import used to estimate this booking’s cost. Use when shown for the selected action.
- Rate estimate booking: Choose the matching saved record. Check the customer and amount before continuing. Required when this field is shown.
- Cost effective time (Kolkata): Enter when the event really happened. Use the time zone named in the label. Required when this field is shown.
- Evidence reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Required when this field is shown.
- Evidence and allocation reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Allocation booking / parcel: Choose the booking. Choose a parcel or Whole booking. For a manual allocation
- Allocation amount (₹): This booking’s share of the source cost. Money not allocated stays as a remainder. For a cost amount; not for Not applicable

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Shipment costs

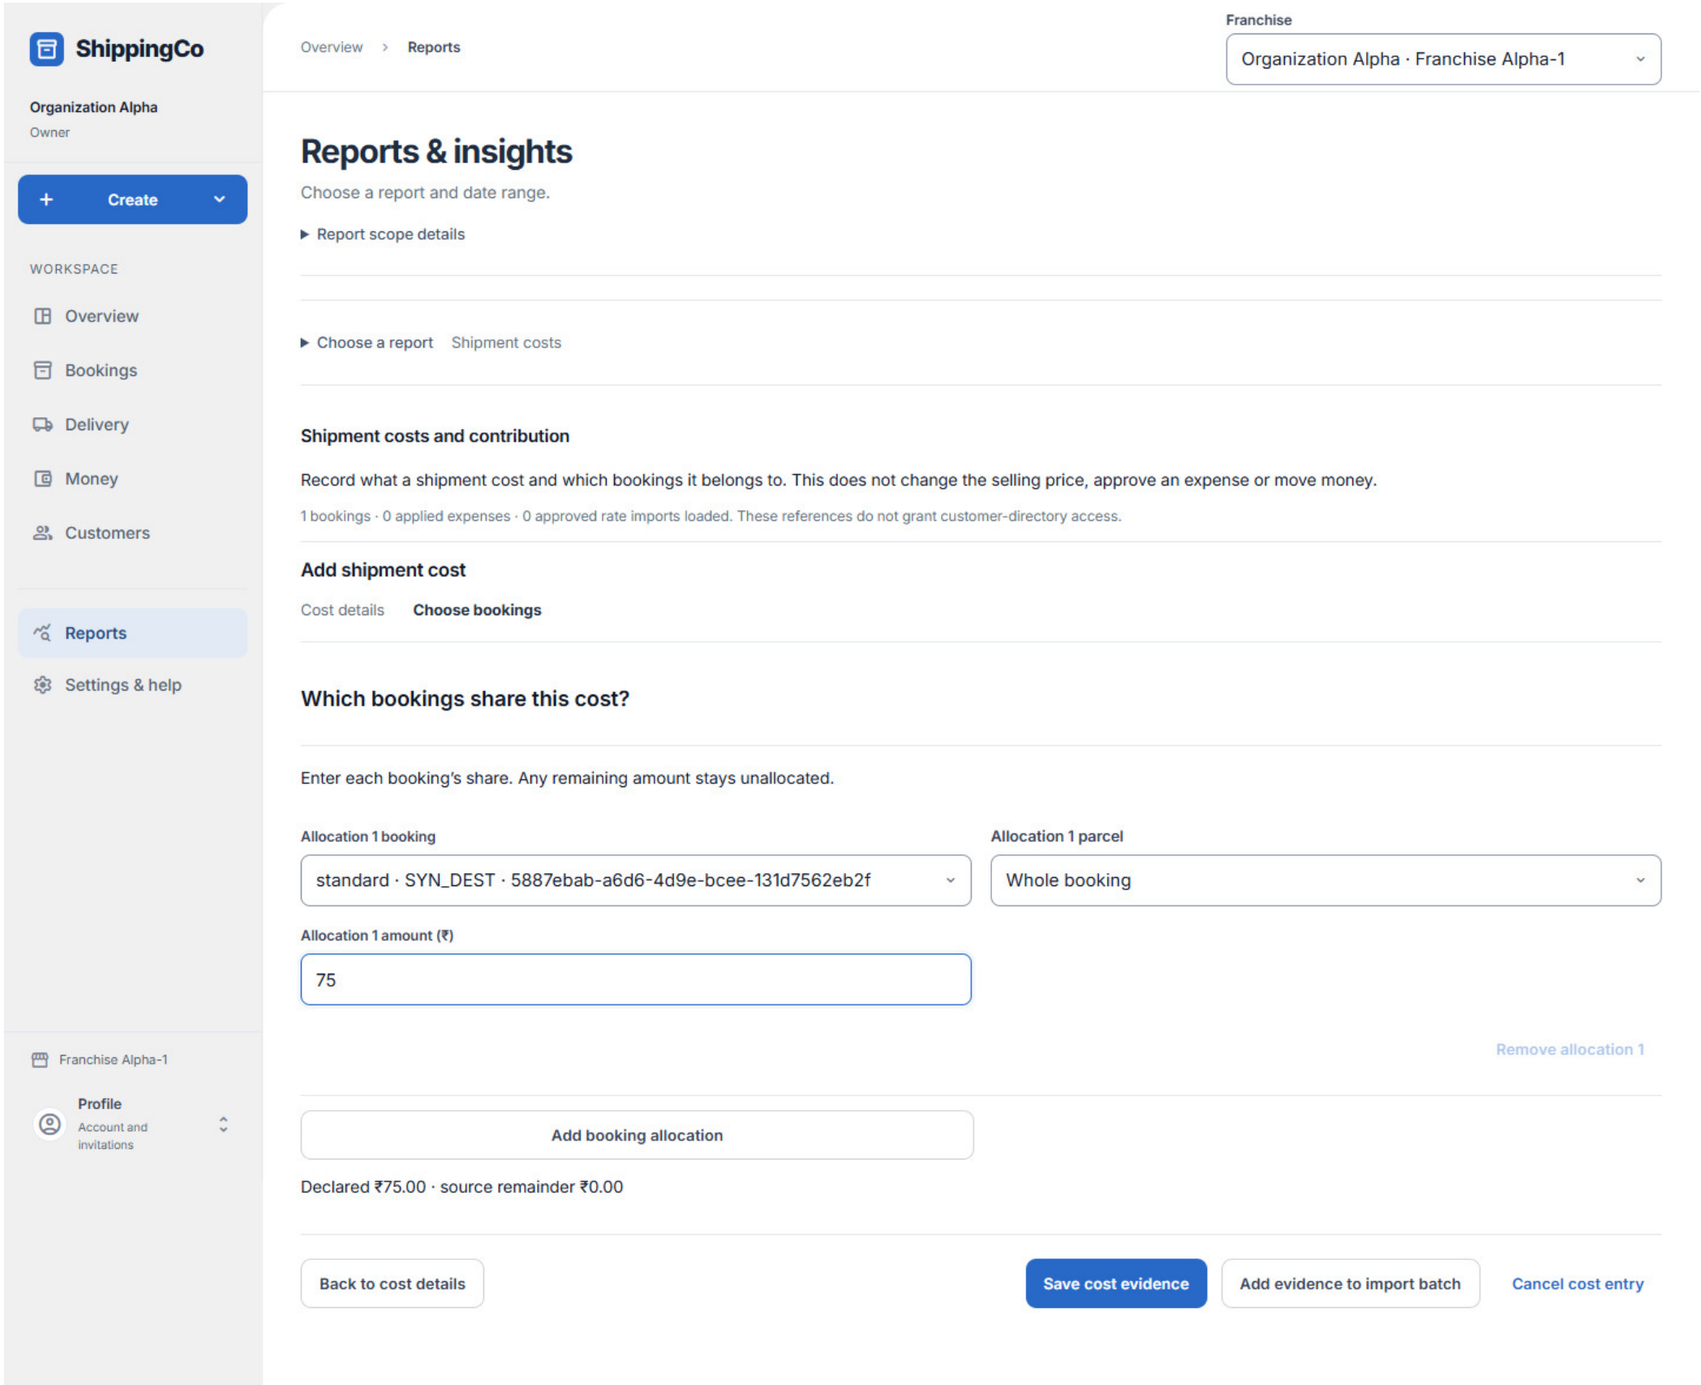
Booking allocations.



Revenue less shipment costs

What this helps you do

- Compare adjusted revenue with shipment costs, including missing and estimated evidence.

Open this feature

- Reports > Choose a report > What did each shipment cost?.
- Check the active branch first. Available actions depend on your role and the selected record.

Capture contribution

- Choose Today, This week, or Contribution from day and Contribution through day. Maximum booking period is 31 days.
- More report options is optional. Expand it for permitted branches, grouping or historical cutoffs.
- Effective cutoff E limits when changes took effect; Recorded evidence cutoff K limits when the app knew about them. Both are optional UTC timestamps; leave blank for current evidence.
- Choose grouping by courier, service, customer, destination or period when needed. Capture contribution report.

Read and inspect

- Compare adjusted tax-exclusive revenue, actual costs, estimated costs and unknown categories. Missing costs are unknown, not zero. Contribution is not net profit or cash available to spend.
- Inspect booking and cost evidence. Open current source history can show newer revisions than the captured report.
- Load next contribution page for more rows. Download contribution CSV uses the saved capture when export is permitted. Create a new report to include later changes.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Contribution from day: Enter the contribution from day for this action, using the time zone shown. Required when this field is shown.
- Contribution through day: Enter the contribution through day for this action, using the time zone shown. Required when this field is shown.
- Effective cutoff E (UTC, optional): Advanced: the latest effective time included. Leave blank for now. Optional
- Recorded evidence cutoff K (UTC, optional): Advanced: include evidence recorded by this time. Leave blank for now. Optional

- Contribution grouping: Group by courier, service, customer, destination or period. Use when shown for the selected action.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Checking bank records

What this helps you do

- Compare imported bank transactions with payments already recorded in the app.

Open this feature

- Money > Reconciliation.
- Check the active branch first. Available actions depend on your role and the selected record.

Upload, inspect and map

- Select receiving account and open Statements and mappings. Choose Statement CSV, then Inspect CSV columns. Mapping and period controls appear after inspection.
- CSV must be UTF-8: at most 64 KiB, 200 rows, 16 columns and 256 characters per cell. Bank formats are not automatically recognised.
- Choose Statement mapping version. An administrator can Create a mapping or Revise this mapping using a clear name, stable uppercase source namespace, date column/format and amount layout/unit.
- Map a signed amount and positive direction, separate credit/debit columns, or amount plus direction and exact credit/debit values. Reference, verified unique transaction ID and currency columns are optional; absent currency means INR. Leave ID blank unless uniqueness is verified.
- Save mapping version. Enter the inclusive statement period dates and Validate and save preview.

Review and import

- Open the saved import. Check row date, direction, amount, reference, validation and outcome. Import next rows processes at most 20 at a time.
- Resolve ambiguous rows: reject, confirm distinct or link a verified existing transaction when offered. Conflicts may allow rejection only. Enter a review reason of at least three characters and select the existing transaction for duplicates.
- Check processed and needs-review totals. Importing stores statement evidence, not new customer receipts.

Match evidence

- Select statement transactions and recorded sources for the selected account. Review individual allocation amounts; selections survive catalogue pagination.
- For card work select a saved settlement batch or supply settlement reference and expected settlement date for the relevant batch action.
- Choose manual verification or strict unique account, currency, reference and full-amount matching. Enter Match or batch review reason. Check gross, fees, net and selected statement totals before Confirm evidence match. Suggestions still need review.

Daily review

- Choose Review from and Review to within 31 days, then Capture current review. Filter Evidence status after capture.
- Open an evidence row and enter Evidence review reason. Choose Bank entry classification or Discrepancy type for the relevant action. Inspect match and unmatch history before resolving a difference.
- Classification and resolution do not change recorded money or create sales. A screenshot alone does not verify a bank payment.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Statement mapping version: Select the statement mapping version appropriate to the action explained above. Use when shown for the selected action.
- Statement period from (Asia/Kolkata): Enter the statement period from (asia/kolkata) for this action, using the time zone shown. Required when this field is shown.
- Statement period to (inclusive): Enter the statement period to (inclusive) for this action, using the time zone shown. Required when this field is shown.
- Mapping name: Enter a short, clear name that your staff will recognise. Required when this field is shown.
- Source identity namespace: A stable uppercase name for the bank statement source. Keep it the same for later imports. Required when this field is shown.
- Date format: Enter the date format for this action, using the time zone shown. Use when shown for the selected action.
- Amount layout: How the statement file separates money in and money out. Use when shown for the selected action.
- Amount unit: Whether the statement file stores amounts in rupees or paise. Use when shown for the selected action.
- Positive amounts represent: Choose whether a positive number means money in or money out. Use when shown for the selected action.
- Exact credit value: The exact text in the file that means money came in. Use when shown for the selected action.
- Exact debit value: The exact text in the file that means money went out. Use when shown for the selected action.
- Card settlement batch: Choose the matching saved record. Check the customer and amount before continuing. Use when shown for the selected action.
- Settlement reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.

- Expected settlement date (Asia/Kolkata): Enter the expected settlement date (asia/kolkata) for this action, using the time zone shown. Use when shown for the selected action.
- Verification method: Choose how the money was paid or checked. Use the option that actually applies. Use when shown for the selected action.
- Match or batch review reason: Explain why you are making this request or change. Use the real business reason. Required when this field is shown.
- Review from (Asia/Kolkata): Enter the review from (asia/kolkata) for this action, using the time zone shown. Required when this field is shown.
- Review to (up to 31 days): Enter the review to (up to 31 days) for this action, using the time zone shown. Required when this field is shown.
- Evidence status: Choose the state or decision that matches the record you have reviewed. Use when shown for the selected action.
- Evidence review reason: Explain why you are making this request or change. Use the real business reason. Use when shown for the selected action.
- Bank entry classification: Select the bank entry classification appropriate to the action explained above. Use when shown for the selected action.
- Discrepancy type: Select the discrepancy type appropriate to the action explained above. Use when shown for the selected action.
- Date column: Choose the matching column from the uploaded statement file. Required
- Amount column: Choose the matching column from the uploaded statement file. For one-amount layouts
- Credit column / Debit column: Choose the matching column from the uploaded statement file. For separate credit and debit amounts
- Direction column: Choose the matching column from the uploaded statement file. For amount plus direction layout
- External reference column: Choose the matching column from the uploaded statement file. Optional
- Proven unique transaction ID column: Choose the matching column from the uploaded statement file. Optional; use only a verified unique ID
- Currency column (otherwise INR): Choose the matching column from the uploaded statement file. Optional; omitted means INR
- Row identity decision: Reject the row, confirm it is distinct, or link it to the same saved transaction. Only available decisions are shown. For rows needing review
- Row existing transaction: The saved transaction that this duplicate row refers to. For a duplicate decision
- Row review reason: Explain how you checked the row. Required for a row decision

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.

- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

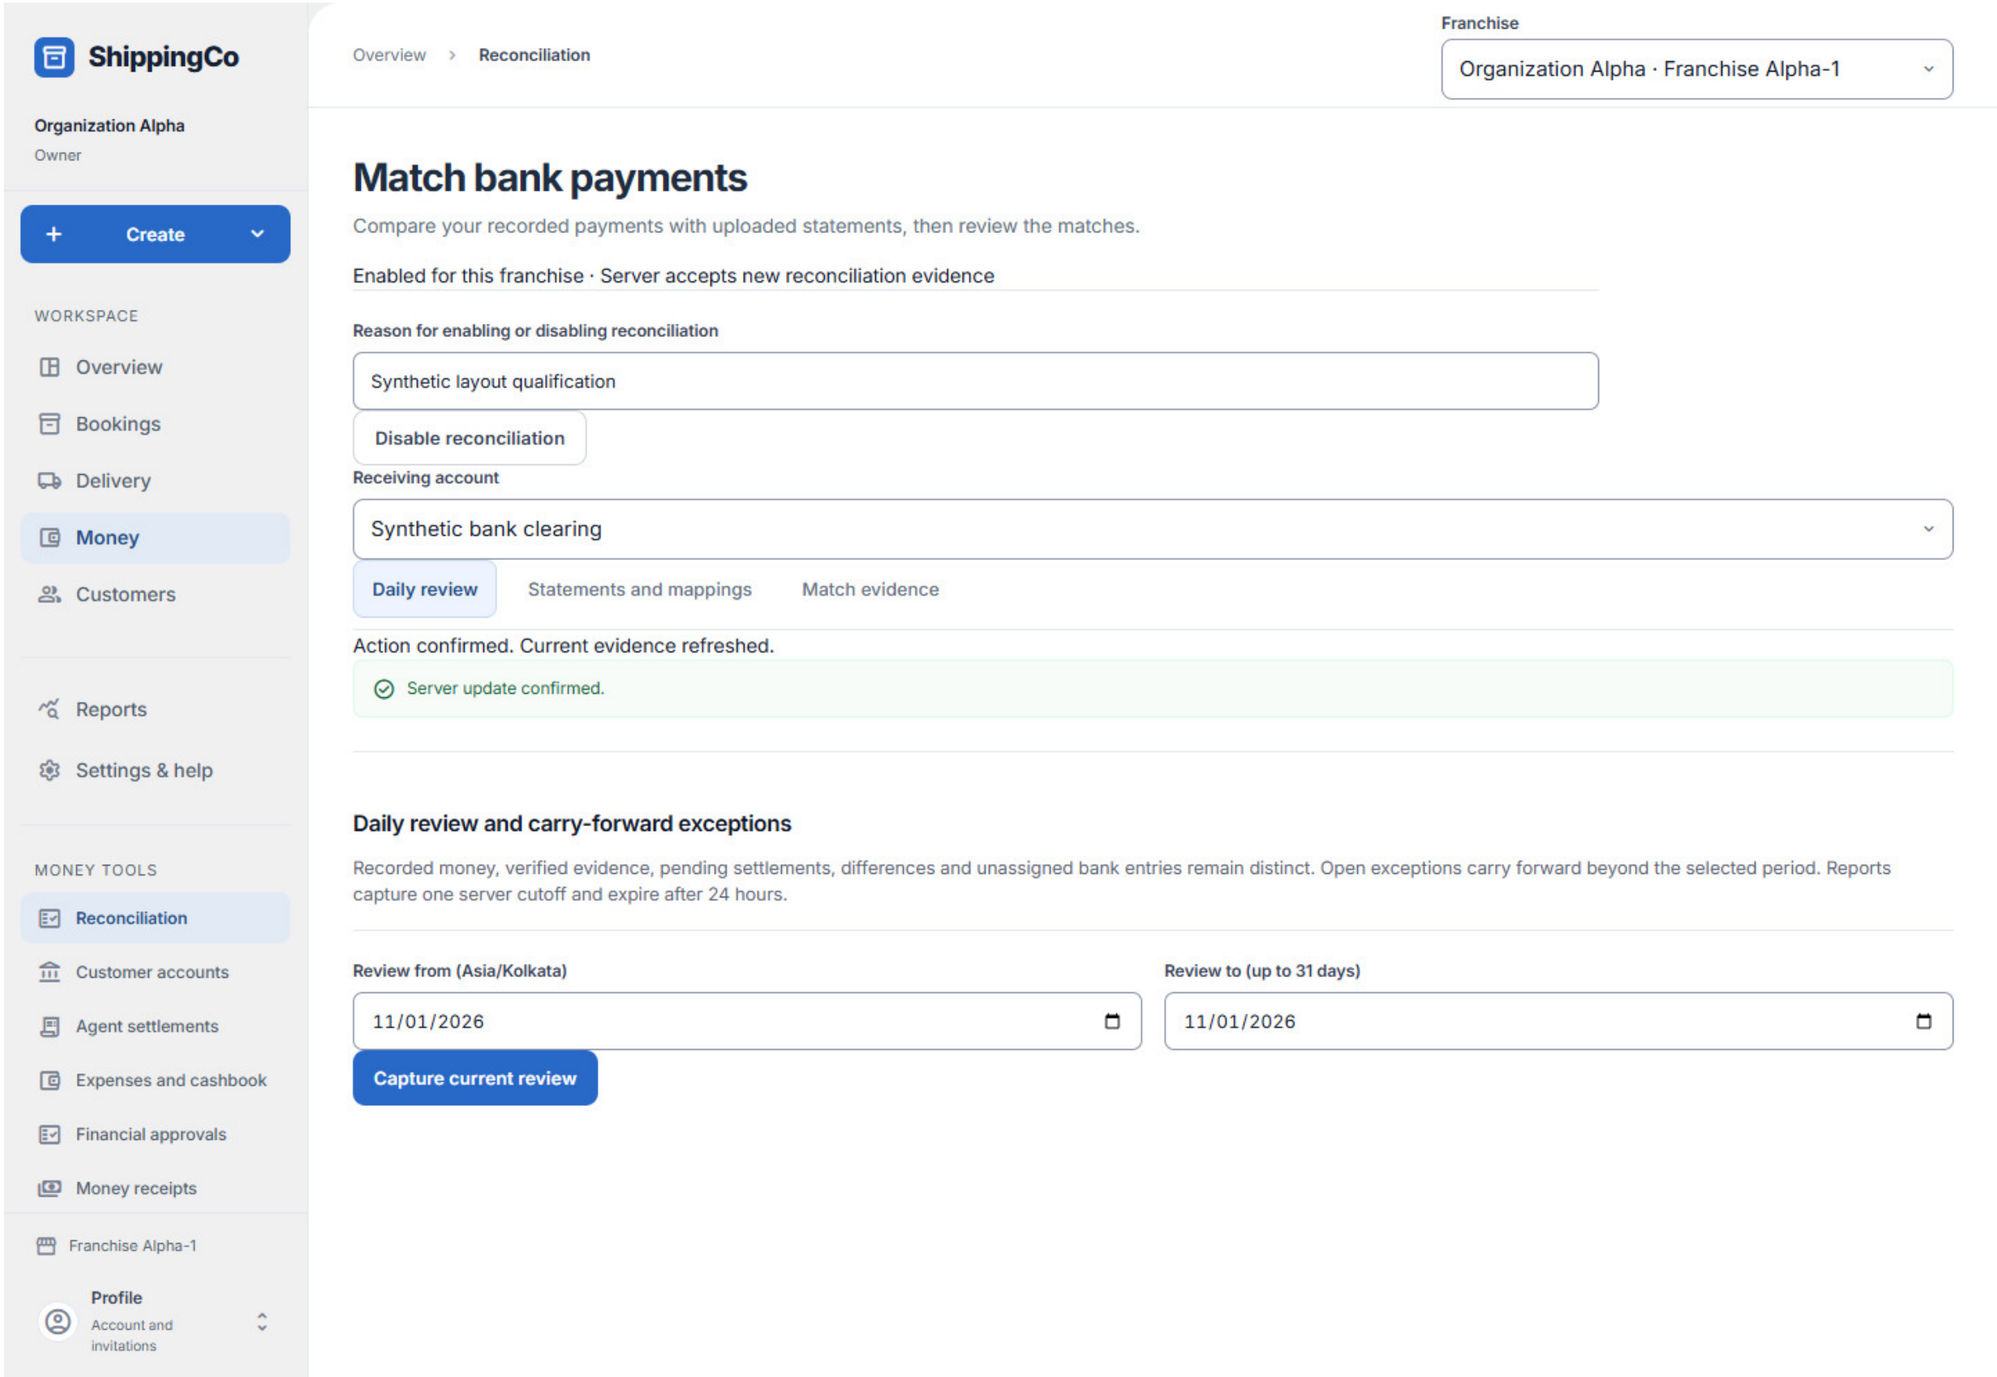
Daily reconciliation review.



Approvals and refunds

What this helps you do

- Request, independently review and record financial corrections or actual refunds.

Open this feature

- Money > Financial approvals.
- Check the active branch first. Available actions depend on your role and the selected record.

Prepare proposal

- Enter Proposal booking reference and Load current booking amounts before choosing Proposed action and Proposal reason.
- For a reduction enter the pre-tax, taxable base, CGST, SGST, IGST and rounding reductions. These reduce current amounts; they are not replacement totals.
- For refund enter actual refund amount within available refundable credit. For refund correction select Original refund to correct and the wrongly recorded amount to restore; this restores credit without a new transfer.
- Optionally add up to ten document links with kind and real reference. External invoices and credit notes remain manually recorded, unverified evidence. Select Submit for financial approval; amendments use Submit amended proposal.

Review and apply

- Open the saved request by reference or select its saved record. A different administrator selects Approve financial proposal or Reject financial proposal after review; the submitter cannot approve their own request.
- Amend my pending proposal replaces it and requires a new decision. Check current booking evidence and policy before applying an approved change.
- For approved actual refund choose source account, allowed return method, actual refund time in Kolkata, private beneficiary reference and private actual transfer reference. Record approved actual refund only after the real money return.
- Financial cancellation does not stop physical delivery. A saved refund record does not send money.

Audit and policy

- Set Financial review audit dates, Action kind and Captured status. Expand optional actor or booking reference filters only when needed. Capture financial audit saves that evidence.
- An administrator can enable approved policy or disable new approvals and applications, then Save approved financial policy revision. Disabling is not an approval bypass.
- A changed policy requires pending proposals to be amended. An older-policy approval cannot be applied; prepare a proposal against current policy and amounts.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Financial request reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Proposal booking reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Proposed action: Select the proposed action appropriate to the action explained above. Use when shown for the selected action.
- Proposal reason: Explain why you are making this request or change. Use the real business reason. Use when shown for the selected action.
- Original refund to correct: Select the original refund to correct appropriate to the action explained above. Use when shown for the selected action.
- Refund source account: Select the refund source account involved in this action; check its account and responsible person. Use when shown for the selected action.
- Actual return method: Choose how the money was paid or checked. Use the option that actually applies. Use when shown for the selected action.
- Actual refund time (Kolkata): Enter when the event really happened. Use the time zone named in the label. Use when shown for the selected action.
- Private beneficiary reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Private actual transfer reference: Use the reference from the matching saved record or real supporting document. Do not invent one. Use when shown for the selected action.
- Financial approval policy state: Select the financial approval policy state appropriate to the action explained above. Use when shown for the selected action.
- From recorded day: Enter the from recorded day for this action, using the time zone shown. Use when shown for the selected action.
- Through recorded day: Enter the through recorded day for this action, using the time zone shown. Use when shown for the selected action.
- Action kind: Select the action kind appropriate to the action explained above. Use when shown for the selected action.
- Captured status: Choose the state or decision that matches the record you have reviewed. Use when shown for the selected action.
- Actor reference (optional): Use the reference from the matching saved record or real supporting document. Do not invent one. Optional
- Booking reference (optional): Use the reference from the matching saved record or real supporting document. Do not invent one. Optional

- Pre-tax charge / Taxable base / CGST / SGST / IGST / Rounding reduction (₹): The amount to remove from each existing component. These are reductions, not replacement totals. For discount or correction
- Actual refund amount (₹): The money actually returned, within the available refund credit. For refund
- Incorrectly recorded refund amount to restore (₹): The part of an incorrect refund record to undo. This does not transfer money. For refund correction
- Document kind and reference: Select an issued receipt, external invoice or external credit note and enter its real reference. Optional; up to ten documents

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Accountant register

What this helps you do

- Capture source evidence and controls for your accountant.

Open this feature

- Reports > Choose a report > What should the accountant check?.
- Check the active branch first. Available actions depend on your role and the selected record.

Capture the register

- Choose Today, This week or inclusive Register from day and Register through day in Kolkata, up to 31 days.
- Expand Export options and branches only when needed. Select permitted franchises; the active branch stays included. Include private payment and approval references only when needed.
- Accounting format is Generic CSV v1; compatibility with external accounting software is not claimed. Select Capture register. A capture supports up to 5,000 combined source rows and 8 MiB and expires after 24 hours.

Inspect and export

- Choose Evidence family to narrow saved sources. Inspect saved source evidence shows exact values and correction evidence; Close source evidence returns to the list.
- Review Independent source controls: source and export totals should agree. View sources opens control evidence. Use source and control pagination for remaining rows.
- Download CSV bundle requires export permission; reading access alone does not grant it. Empty results retain headers and control definitions.
- Keep advances, seller COD, cash custody and allocations separate from sales. Statements group existing debt rather than creating another sale.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Register from day: Enter the register from day for this action, using the time zone shown. Use when shown for the selected action.
- Register through day: Enter the register through day for this action, using the time zone shown. Use when shown for the selected action.
- Accounting format: Select the accounting format involved in this action; check its account and responsible person. Use when shown for the selected action.

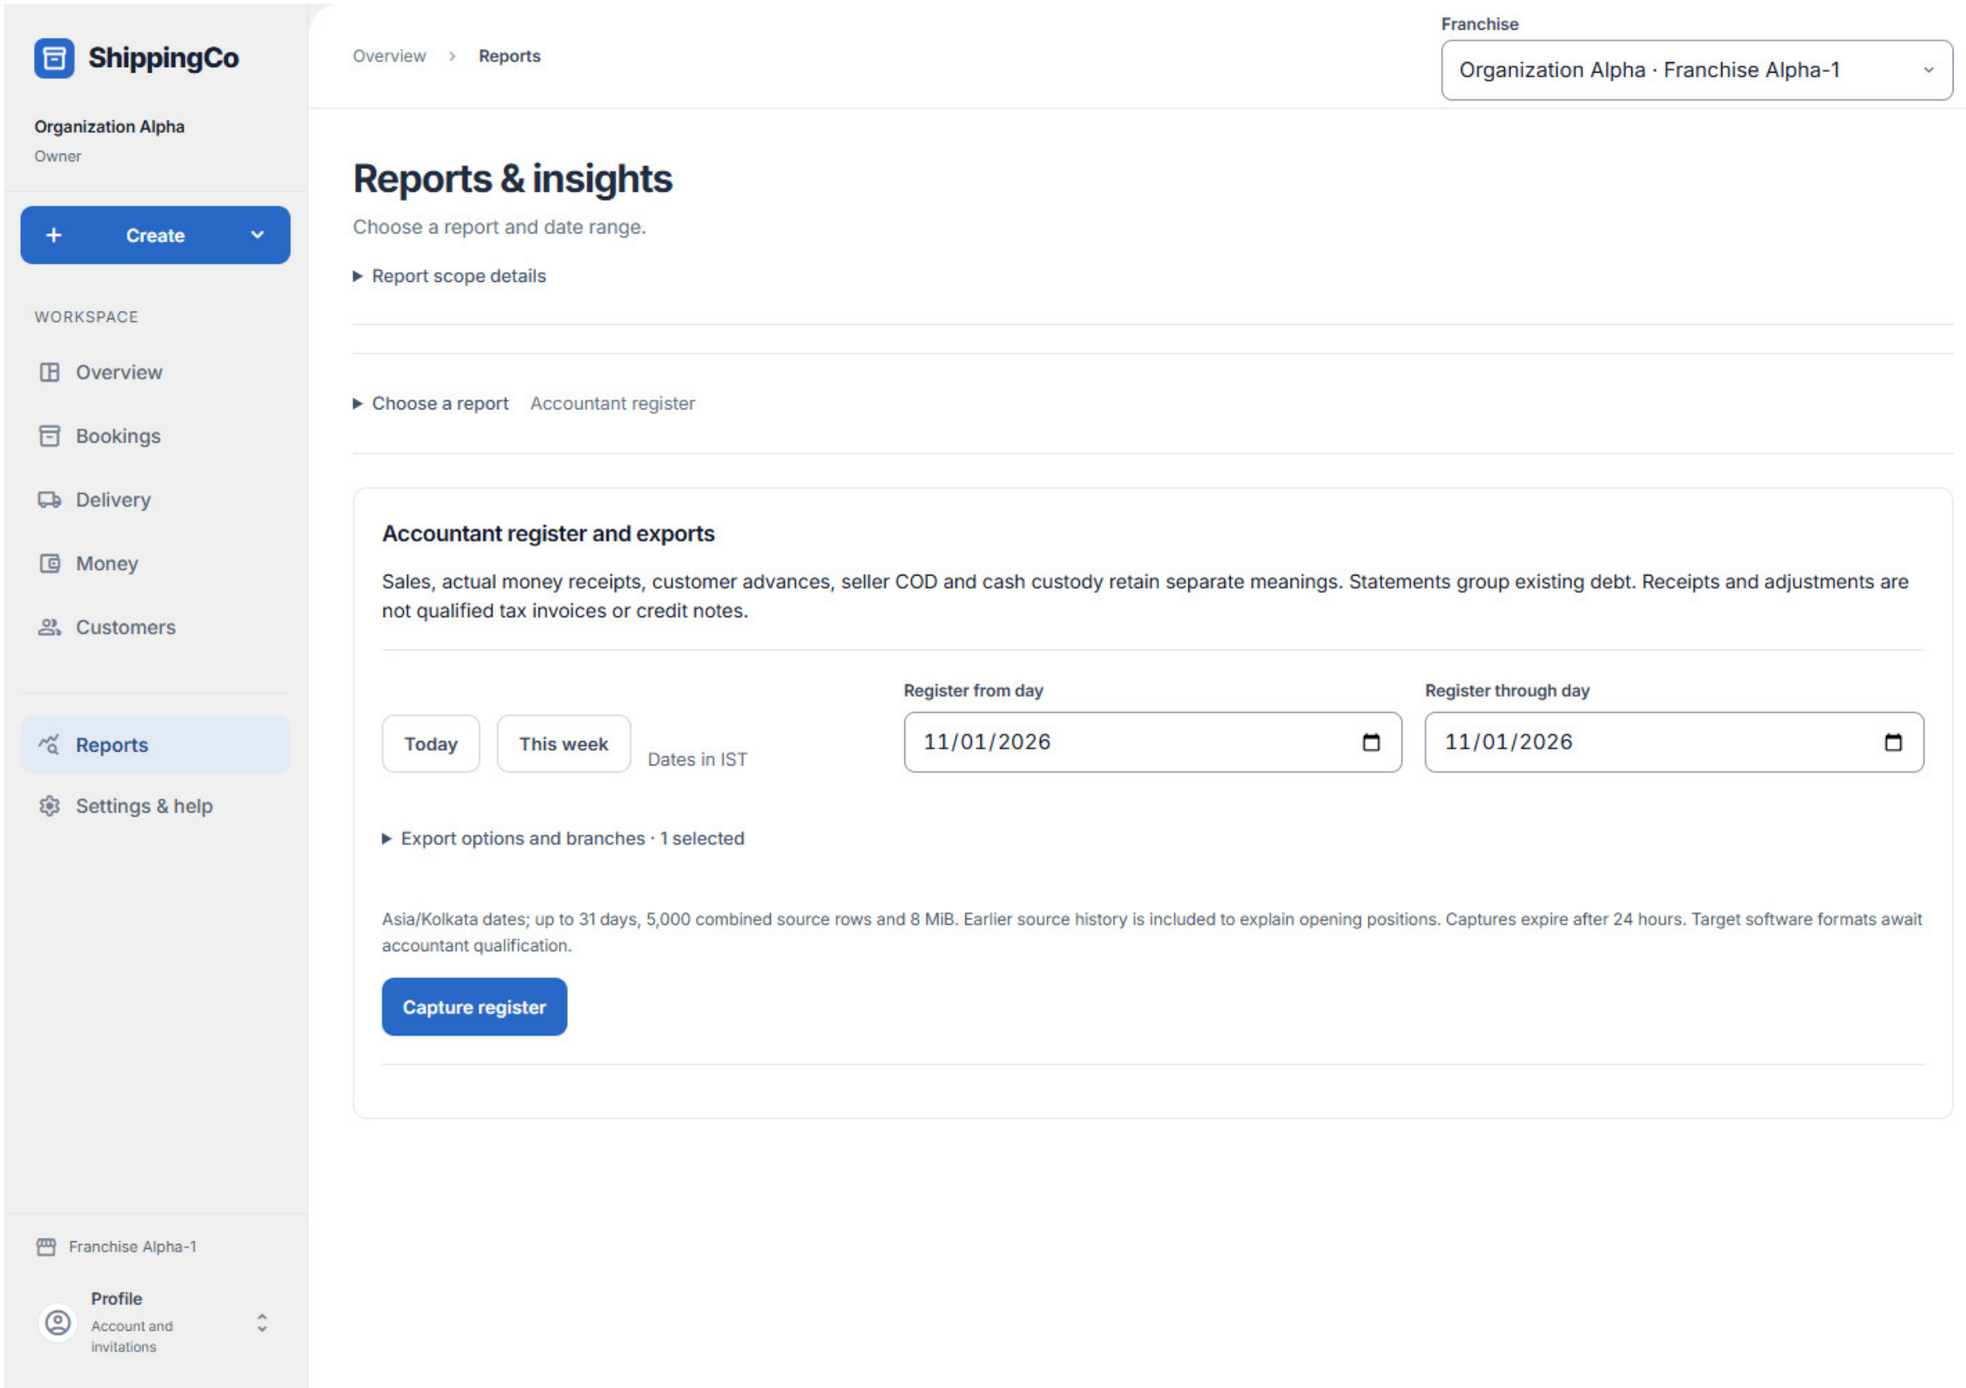
- Evidence family: Select the evidence family appropriate to the action explained above. Use when shown for the selected action.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Accountant register

Accountant register screen. Actual app screen using example data; names, dates and amounts are examples, not your business records.



Outstanding balances by age

What this helps you do

- Find unpaid balances and distinguish booking age from overdue debt.

Open this feature

- Reports > Choose a report > Which payments are overdue?.
- Check the active branch first. Available actions depend on your role and the selected record.

Choose age and filters

- Age from can be Booking date or Due date. Booking age is not days overdue; due dates remain unknown where no terms were saved.
- Choose Parcel status or leave All statuses. Overdue only selects unpaid balances after due date in Kolkata.
- Customer and balance options are optional. Customer ID means the responsible debtor, which may differ from the shipping customer. Choose Outstanding only or All, including settled and credit.
- Select Create ageing snapshot. It covers all booking dates, up to 5,000 matches. A parcel-status match includes its whole booking once.

Read the report

- Check captured filters and time, gross, net collections, outstanding, refundable credit and age bands. Advances remain separate; delivery does not settle payment.
- Open linked evidence or statements before following up a balance. Load more bookings retrieves remaining rows.
- Download matching ageing CSV requires export permission. Captures expire after 24 hours; create a new report for current balances.

Fields and when to use them

These fields belong to the actions above. Complete the fields for your selected action; optional filters may stay blank.

- Age from: Choose booking date or due date; a missing due date remains unknown. Use when shown for the selected action.
- Parcel status: Choose the state or decision that matches the record you have reviewed. Use when shown for the selected action.
- Customer ID (optional): Optional reference of the responsible debtor; blank includes all permitted customers. Optional
- Balances: Outstanding only, or all including settled and credit. Use when shown for the selected action.

If you need to retry

- No records: check branch, account or customer and filters. Use Load more where offered before deciding a record is missing.
- Invalid or missing value: read the form message, correct the draft, then review amounts and references again.
- Uncertain save: use the offered retry for the same request. Do not create a second payment, return, expense or application to guess whether the first saved.
- Changed evidence or policy: refresh current records and review them before a new request. A saved report retains its captured figures; create another report for current results.

Outstanding balances by age

Outstanding balances by age screen. Actual app screen using example data; names, dates and amounts are examples, not your business records.
